> Associated Groups	249

A photograph of a laboratory setting. In the foreground, a person wearing blue gloves is holding a clear plastic pipette with a black tip, positioned above a clear glass Erlenmeyer flask containing a light-colored liquid. In the background, there is a large, cylindrical metal drum with the word "DOLMUS" printed on it in white capital letters. Behind the drum, several other pieces of laboratory equipment and containers are visible, though they are slightly out of focus.

## Foreword

The still recent creation of Biohealth Research Institutes in major hospitals in Spain has proven to be a success by enabling basic and clinical scientists to interact. This is attested by the results of many of these institutes. To some extent, this year's IDIVAL Report is a reflection of our Institute's path during this term. Without being complacent, a quick review tells us that our Institute is making good progress. Firstly I would highlight the rise in Programmes to Drive Research. There are 13 in total and many of them (PostMir, Mentoring, Pre-doctoral, Next-Val and Pre-doctoral Mobility) aim to support and encourage young research talent, something that is essential to replace a successful generation at our hospital in just a few years.

Here, no effort can be too much. Two of the Programmes, appropriately, include Primary Healthcare and Nursing, a firm commitment by the current Regional Ministry. If generating young talent is to be a major goal for the future, we must not forget opening up to the outside, both in Spain and abroad. Milestones such IDIVAL's Management Director becoming the Director of ITEMAS, and IDIVAL leading a European project for the first time, indicate that we are working well in this endeavour and we must increasingly focus on that.

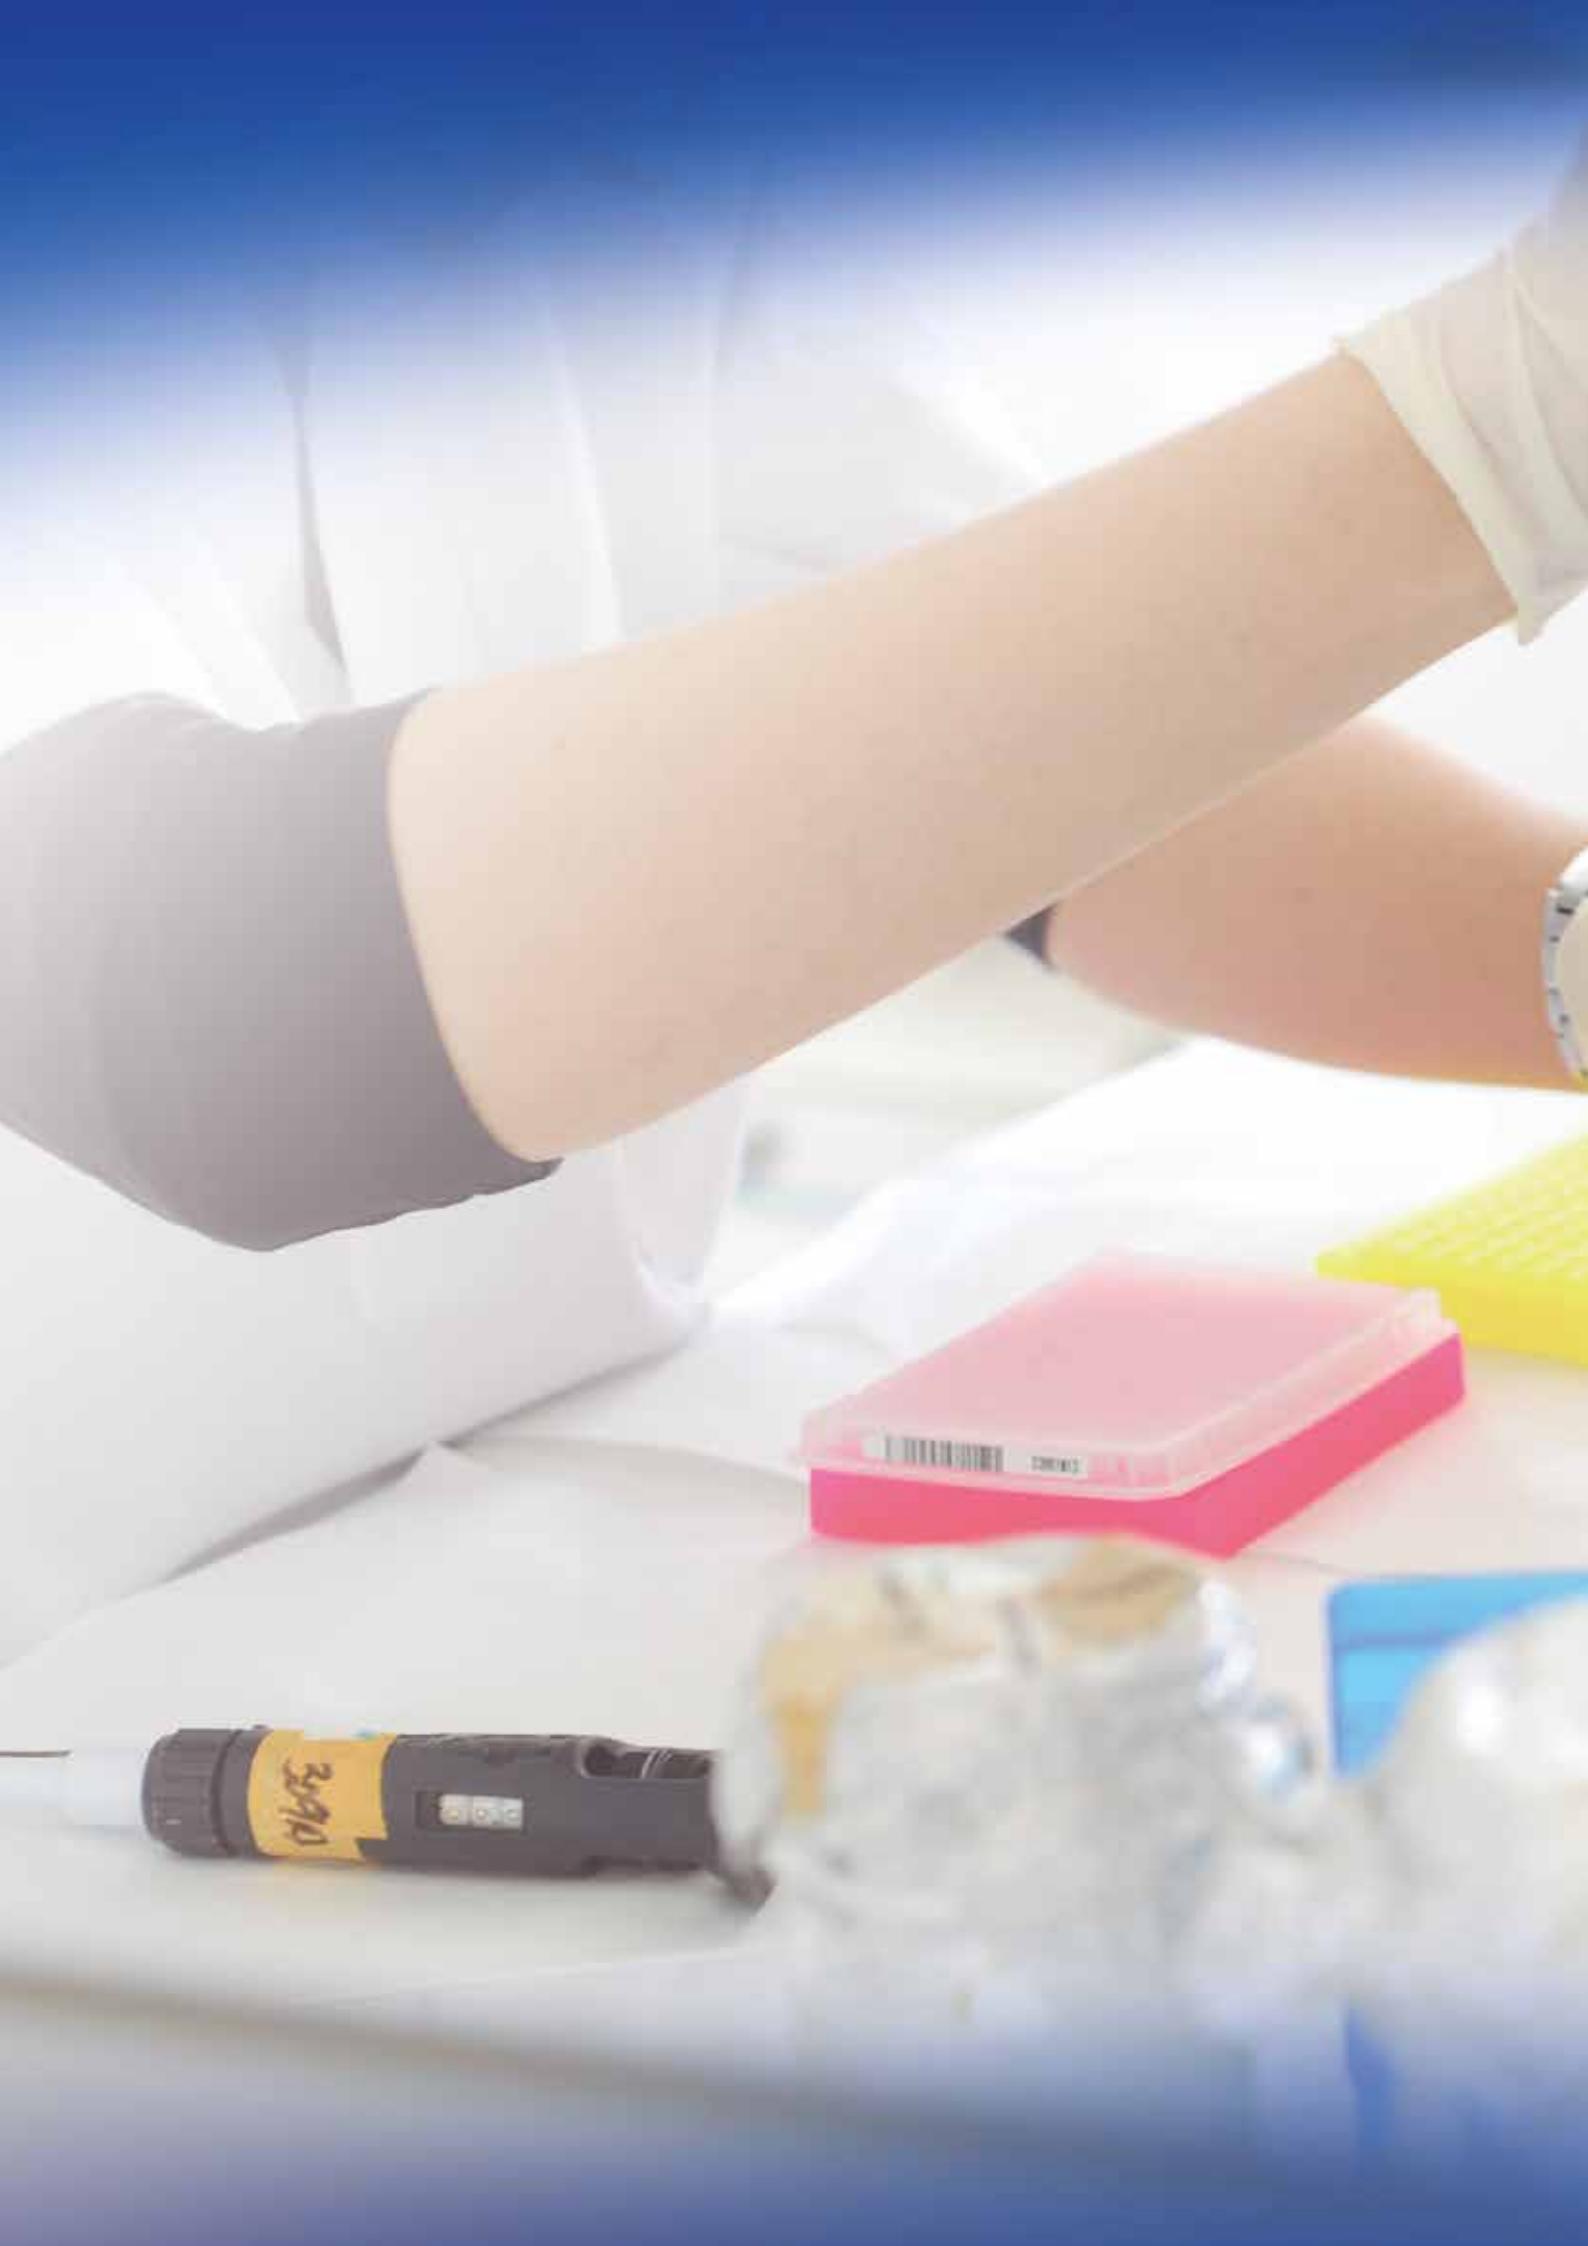

A Research Institute is essentially assessed by the number and quality of its scientific publications and research projects. Here our objective data for 2018 are also positive. IDIVAL researchers have published 458 articles over the past year. As proof of their quality, their average impact was 5.01 and over half of the

documents are in the first quartile. IDIVAL's global impact factor in 2018 was 2296, 11% more than 2017 and 22% more than four years ago. The same is true of the number of competitive research projects (90 in 2018) and clinical trials (300).

In short, the data show that IDIVAL has more than met its objectives in 2018, and Marqués de Valdecilla University Hospital management want to congratulate our researchers for their dedication, with special thanks to Benedicto Crespo, our Scientific Director, whom we wish all the best in his new job. Recent initiatives such as the Open Repository, the Colabora programme to attract donations, EVALTEC and the FUSIÓN intra-entrepreneurship proposal are testament to our desire for drive, innovation and transparency at IDIVAL, and they will ensure that the efforts of researchers and the Government of Cantabria at the Institute will benefit society as a whole.

### Julio Pascual

Managing Director of the Marqués de Valdecilla University Hospital, member of the Board of Governors, and Chairman of the Executive Committee of the IDIVAL Board of Governors

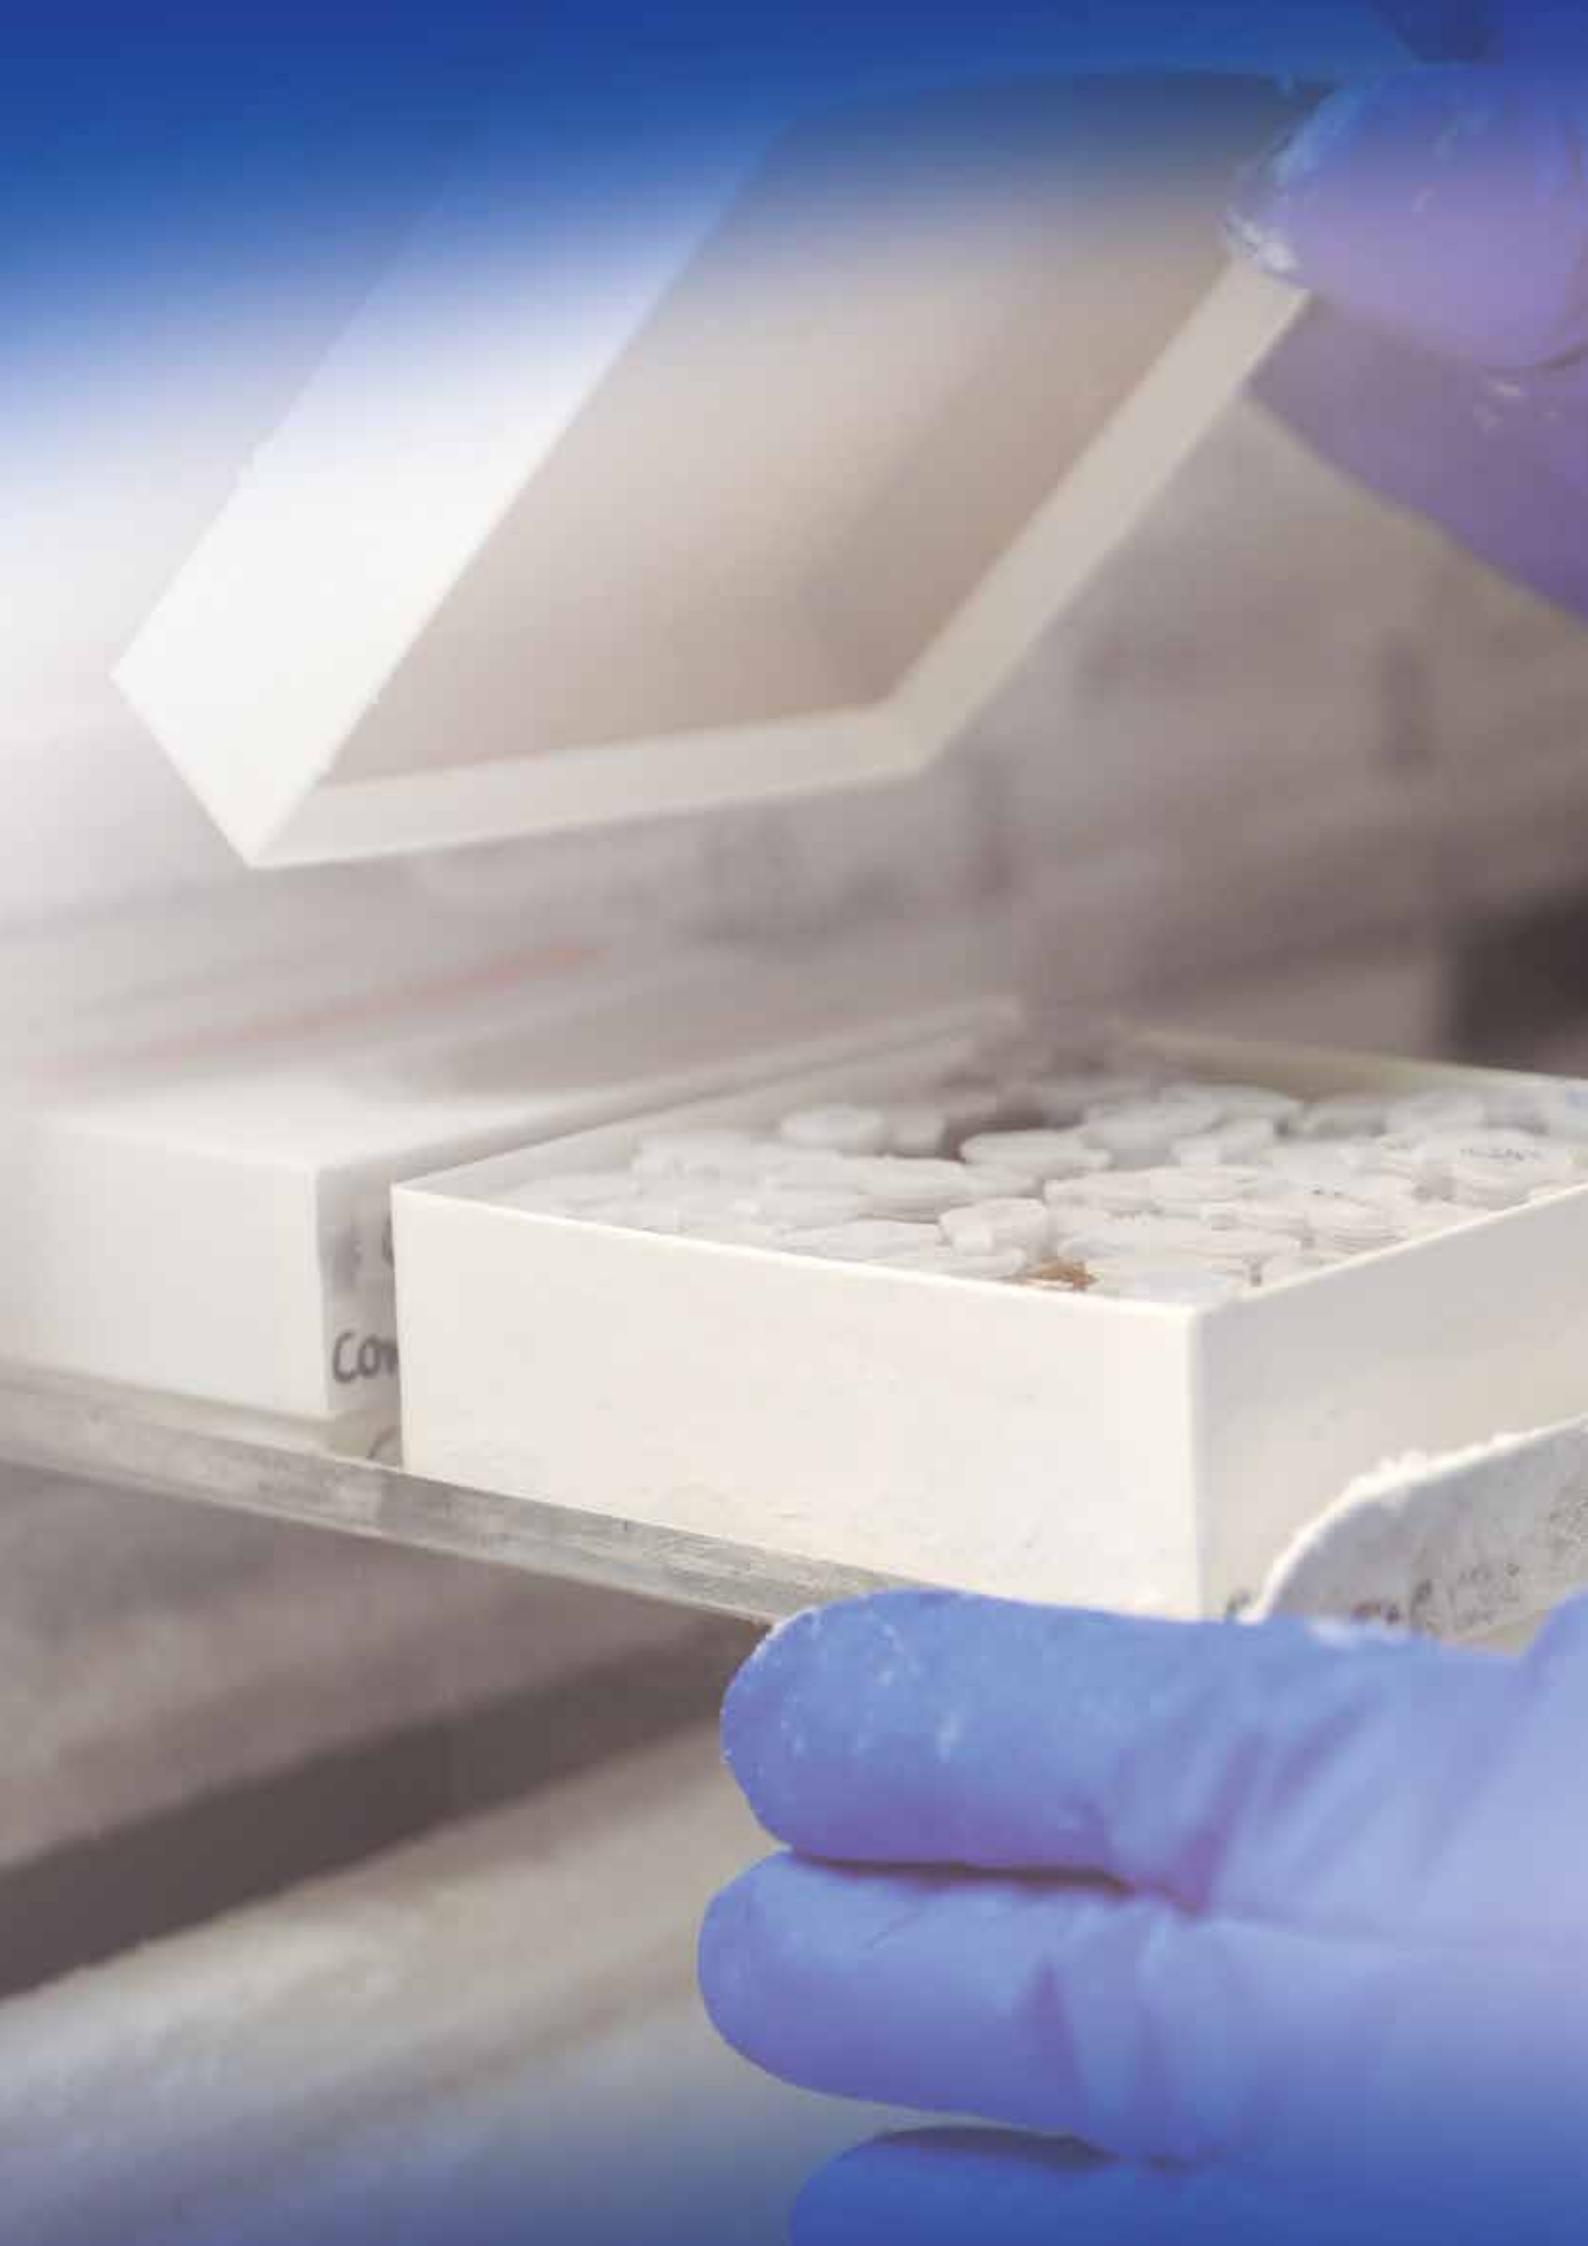

Valdecilla is the unifying brand which Ramón Pelayo de la Torriente, Marquis of Valdecilla, applied to the institutions which he created: the Marqués de Valdecilla University Hospital, the Marqués de Valdecilla Research Institute (IDIVAL), the Valdecilla Virtual Hospital, and the Marqués de Valdecilla Foundation, and which still maintains that original spirit of innovation, cross-border collaboration, and philanthropy. The innovative spirit of the Valdecilla brand is particularly evident in IDIVAL, which, as the Healthcare Research Institute of Cantabria, was conceived with the goal of promoting research

and innovation in the field of biomedical sciences at the Marqués de Valdecilla University Hospital with the contribution of the University of Cantabria, placing it at a level of national and international excellence. IDIVAL was conceived in late 2013 through an agreement between the Government of Cantabria and the University of Cantabria, as the successor to the Marqués de Valdecilla Training and Research Institute (IFIMAV). IFIMAV was established in 2002 as a research management unit within the Marqués de Valdecilla Foundation and evolved

following the model of health research institutes and in line with Royal Decree 339/2004 of 27 February. Therefore, the constitution of IDIVAL involves strong support by its founding institutions, the University of Cantabria and the Government of Cantabria, for health research in the Valdecilla environment. Taking over from IFIMAV, IDIVAL was launched in 2014 to harmoniously integrate basic, clinical and public health research, encouraging translational research and improving the application of its scientific progress to address the most prevalent health problems.

IDIVAL promotes, manages and develops the biomedical research of the Marqués de Valdecilla University Hospital and its environment. It is financed by the Government of Cantabria and the University of Cantabria.

**IDIVAL encourages the development of knowledge.**

IDIVAL drives activities for the development of excellent scientific output, and has established 19 high-impact research groups in six areas of research: Cancer, Neuroscience, Transplants, Infection and immunity, Metabolism, and Transversal. Another 13 groups are also contributing to its scientific output.

**IDIVAL pursues excellence.**  
In 2018, IDIVAL's researchers

published high-impact works in collaboration with some of the world's best research groups in various biomedical disciplines. Our impact factor was over 2,200 points in 2018. We have accumulated over 140,000 citations in international literature.

**IDIVAL supports researchers.**

In 2018, we developed different programmes to support innovation and research. IDIVAL issued grants for healthcare research worth over a million euros.

**IDIVAL is committed to society.** IDIVAL seeks to improve translational research and promote progress in Cantabria. Its goals include the development of knowledge, technological progress, and innovation in healthcare.

IDIVAL's current challenge is to maximise the application of research results to improve healthcare.

In partnership with prestigious institutions such as the Botín Foundation, IDIVAL has launched an ambitious innovation programme.

**IDIVAL is a leading institution.** IDIVAL was recognised by the Carlos III Health Institute in 2015 as one of Spain's Healthcare Institutes and currently coordinates nationwide the Platform for Innovation in Medical and Healthcare Technologies -ITEMAS- promoted by the Carlos III Health Institute.

# Organisational Structure

## Governing and Advisory Bodies

IDIVAL is governed in accordance with its statutes, published in the Official Gazette of Cantabria (BOC No. 7 of 13 January 2014), by a Board, an Executive Committee, a Management Director, a Scientific Director and its own consulting bodies: Internal Scientific Council and External Scientific Council, appointed by the Board.

It is also advised by the Drug Research Ethics Committee of Cantabria and the Bioethics Committee at the University of Cantabria in compliance with the legal requirements for research.

 Governance level    Operational level    Consultation level

## The Board of IDIVAL

In accordance with IDIVAL's statutes, published in the Official Gazette of Cantabria of 13 January 2014, the board is the highest governing body of IDIVAL and has the highest level of representation. Its functions include approving the budget, the action plan and the annual report of the Institute as well as appointing the directors and members of advisory bodies. In 2018, the Board was made up of the following individuals:

### President:

#### **María Luisa Real González.**

Minister of Health and Social Services of the Government of Cantabria.

### Vice-president:

#### **Ángel Pazos Carro.**

Rector of the University of Cantabria.

### Members:

#### **María Antonia Mora González.**

General Director of Planning and Healthcare, Regional Ministry of Health. Designated by the Regional Minister for Health.

#### **María de la Cruz Reguera Andrés.**

General Secretary. Regional Ministry of Health. Designated by the Regional Minister for Health.

#### **Benigno Caviedes Altable.**

Manager of the Cantabrian Health Service.

#### **Javier León Serrano.**

Vice Rector of Research and Knowledge Transfer. University of Cantabria.

#### **Julio Pascual Gómez.**

Managing Director of the Marqués de Valdecilla University Hospital.

#### **Piero Crespo Baraja.**

Professor at CSIC. Director of the Institute of Biomedicine and Biotechnology of Cantabria. Designated by the Rector of the University of Cantabria.

#### **Manuel Gómez Fleitas.**

Innovation Coordinator. General Surgery Department. Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Surgery. University of Cantabria. Designated by the Managing Director of HUMV.

#### **Pedro José Prada Gómez.**

Head of the Radiotherapy Oncology Department. Marqués de Valdecilla University Hospital. Designated by the Managing Director of HUMV.

#### **José Antonio Riancho Moral.**

Section Head. Internal Medicine Department. Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Psychiatry. University of Cantabria. Designated by the Rector of the University of Cantabria.

#### **Javier Crespo García.**

Head of the Digestive System Department. Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Surgery. University of Cantabria. Designated by the Managing Director of HUMV.

#### **Jesús Castillo Obeso.**

Specialist in Family and Community

Medicine. José Barros Health Centre (Camargo). Designated by agreement between the Regional Minister for Health and the Rector of the University of Cantabria.

#### **María del Carmen Fariñas Álvarez.**

Head of the Infectious Diseases Department. Professor in the Department of Medicine and Surgery. Designated by agreement between the Regional Minister for Health and the Rector of the University of Cantabria.

### Secretary, non-board:

#### **Joaquín Cayón de las Cuevas.**

Head of the Legal Counsel Office of the Regional Ministry of Health.

The IDIVAL Board renewed one of its members in 2018 and met on three occasions.

At these meetings, new members of the External Scientific Council were appointed, and the audited accounts and annual report for 2018 and action plans and budget for 2019 were approved.

## Executive Committee

### President:

**Julio Pascual Gómez.**

President according to the statutes as Managing Director of the Marqués de Valdecilla University Hospital.

### Members:

**Javier León Serrano.**

Vice Rector of Research and Knowledge Transfer. University of Cantabria. Representative of the University of Cantabria.

**Maria de la Cruz Reguera Andrés.**

General Secretary. Regional Ministry of Health. Representative of the Healthcare Administration.

**María Antonia Mora González.**

General Director of Planning and Healthcare, Regional Ministry of Health. Representative of the Healthcare Administration.

**José Antonio Riancho Moral.**

Section Head. Internal Medicine Department. Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Psychiatry. University of Cantabria. Representative of the University of Cantabria.

**María del Carmen Fariñas Álvarez.**

Head of the Infectious Diseases Department. Professor in the Department of Medicine and Surgery. Representative of the University of Cantabria.

IDIVAL's Executive Committee met three times in 2018 in order to monitor the agreements signed by the Foundation and prepare IDIVAL Board meetings in compliance with IDIVAL's statutes.

## Senior Management

IDIVAL's senior management body consists of a Scientific Director and a Management Director, both appointed by the Board of Governors.

**Scientific Director:** the Scientific Director is the senior representative and spokesperson for the Foundation on scientific matters. He directs, plans and leads the Foundation's scientific policy, draws up the scientific plan for the Institute, and coordinates its execution. In 2018, the Board appointed **Benedicto Crespo Facorro** as Scientific Director of IDIVAL. Psychiatry Department Head at the Marqués de Valdecilla University Hospital and Professor at the University of Cantabria. At the time of completing this report, Dr Crespo-Facorro has left IDIVAL, moving to Seville in April 2019 as Department Head and Professor.

**Management Director:** the Management Director acts as representative and spokesperson for the Foundation before institutions regarding management activities, managing the internal organisation of the Institute and its research infrastructure. In 2018, the Management Director of IDIVAL was **Galo Peralta Fernández**.

## External Scientific Council

The External Scientific Council contributes as a scientific advisor in achieving the scientific excellence pursued by IDIVAL. The External Scientific Council offers opinions at the request of the Board or the senior management of IDIVAL and advises on the evaluation of the Institute's activity.

Its members were proposed by IDIVAL's senior management and appointed by the IDIVAL Board in its meeting on 25 February 2014. The members are:

### President:

**Ángel Carracedo Álvarez.**  
 Professor of Legal Medicine.  
 University of Santiago de Compostela.

### Members:

**Ana María Zubiaga Elordieta.**  
 Professor of Genetics, University of the Basque Country, Faculty of Science and Technology. Head of the Genomics Department of the UPV/EHU.

**Francesc Graus Ribas\*.**  
 Head of the Neurology Department. Hospital Clinic of Barcelona. University of Barcelona. IDIBAPS.

**Francisco Mora Teruel\*.**  
 Professor of Human Physiology in the Faculty of Medicine at the Complutense University of Madrid. Professor of Molecular Physiology and Biophysics in the Faculty of Medicine at the University of Iowa.

**Jordi Vila Estapé.**  
 Head of the Bacteriology Department. Hospital Clinic of Barcelona. Professor of Microbiology. Autonomous University of Barcelona. CRESIB.

**Miguel López-Botet Arbona.**  
 Professor of Immunology, Pompeu Fabra University, Barcelona.

**Josep M. Grinyó.**  
 Senior Clinic. University Hospital of Bellvitge. University of Barcelona.

### Juan Bernal Carrasco\*.

Professor of Research at the Spanish National Research Council (CSIC), Director of the Department of Endocrine and Nervous System Pathophysiology. Alberto Sols Biomedical Research Institute.

### Miguel Delgado Rodríguez.

Professor of Preventive Medicine and Public Health. University of Jaén.

### Rafael Cantón Moreno.

Head of the Microbiology Department of the Ramón y Cajal Hospital. Associate Professor of the Department of Microbiology, Faculty of Pharmacy. Complutense University Madrid.

### Xosé Ramón Bustelo.

Director of the Genomics and Proteomics Unit. Centre of Cancer Research. CSIC-University of Salamanca.

### Manuel Elkin Patarroyo Murillo.\*\*

Immunologist, Founding Executive Director of the Immunology Institute Foundation of Colombia.

### Malu Martínez-Chantar\*\*

Leading researcher of the CIC bioGUNE group, Derio, Vizcaya.

### Francisco Sánchez Madrid\*\*

Scientific Director of IIS-Princesa, Department Head and Professor of Immunology at La Princesa University Hospital of the Autonomous University of Madrid.

### Ana Pérez Castillo\*\*

Leading group researcher. Alberto Sols Biomedical Research Institute CSIC-UAM (IIBM) in Madrid.

\* Outgoing in 2018

\*\* Incoming in 2018

Four new members joined the IDIVAL External Scientific Council in 2018, and three left. The External Scientific Council met once to review IDIVAL's new Strategic Plan, the 2018 report, the 2018 action plan, and the IDIVAL 2018 budget, and to assess new groups for incorporation.

## Internal Scientific Council

The Internal Scientific Council is presided over by the Scientific Director of IDIVAL and is made up of researchers appointed by the Board. The Internal Scientific Council of IDIVAL was appointed by the Board at a meeting on 25 February 2014, based on a proposal by the Scientific Director.

In 2018 its members were:

### **María del Carmen Fariñas Álvarez.**

Coordinator of the Infectious Diseases and Immune System Area. Head of the Infectious Diseases Department. Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Psychiatry. University of Cantabria.

### **José Antonio Riancho Moral.**

Coordinator of the Metabolism, Diseases of Ageing and Lifestyle Habits Area. Section Head. Internal Medicine Department. Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Psychiatry. University of Cantabria.

### **Miguel Ángel Lafarga Coscojuela.**

Representative of the University of Cantabria. Professor of Anatomy and Cellular Biology. University of Cantabria.

### **María Amor Hurlé González.**

Representative of the University of Cantabria. Professor of Pharmacology. University of Cantabria.

### **Javier Crespo García.**

Head of the Digestive System Department. Professor in the Department of Medicine and Psychiatry. University of Cantabria.

### **Carlos Pipaón González.**

IDIVAL researcher in the Haematologic Neoplasms and Haematopoietic Progenitor Cell Transplantation Group.

In 2018, the IDIVAL Internal Scientific Council met eight times and, among other business, it reviewed IDIVAL's grants programme, its strategic plan, its annual report, and the projects presented to various competitive calls for entries.

#### **President:**

##### **Benedicto Crespo Facorro.**

Scientific Director of IDIVAL. Section Head. Psychiatry Department at the Marqués de Valdecilla University Hospital. Professor in the Department of Medicine and Psychiatry. University of Cantabria.

#### **Members:**

##### **Marcos López Hoyos.**

Coordinator of the Organ and Tissue Transplant and New Therapies Area. Head of the Immunology Department. Marqués de Valdecilla University Hospital.

##### **Fernando Rivera Herrero.**

Coordinator of the Cancer Area. Head of the Oncology Department. Marqués de Valdecilla University Hospital.

##### **Javier Llorca Díaz.**

Coordinator of the Cross-disciplinary Area. Professor of Preventive Medicine and Public Health. University of Cantabria.

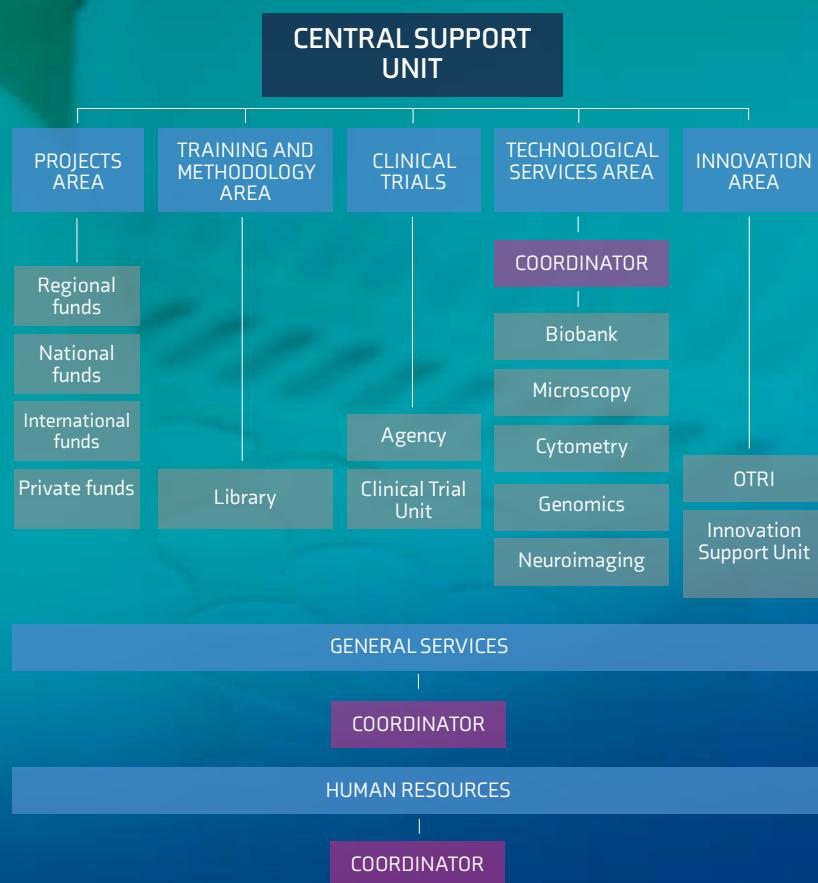

## Support for Researchers

IDIVAL's Central Research Support Unit is divided into six areas: Projects Area, Training and Methodological Support Area, Clinical Trial Area, Technological Support Area, Innovation Area and General Services Area.

## ○ The IDIVAL building

IDIVAL has its own facilities, located within the Marqués de Valdecilla University Hospital complex. The IDIVAL building comprises 3,000 m<sup>2</sup>. Located inside the building are most services of the Central Support Research Unit, as well as laboratory spaces for IDIVAL groups and meeting and work rooms for researchers.

## ○ General Services Area

### ○ Coordinator

Julio Muela Carriles (IDIVAL)

### ○ Technicians

Accounting: Javier Arce Sáiz (IDIVAL)

### ○ Administrative Personnel

Invoicing: Laura del Río Celis (IDIVAL)  
Registry: Elena Calvo Llano (IDIVAL)

IDIVAL's General Services Area brings together the resources needed for administrative and legal management across all areas of IDIVAL.

## ○ Human Resources Area

### ○ Coordinator

Marta Abelleira Álvarez (IDIVAL)

### ○ Administrative personnel

María José San Emeterio (IDIVAL)

IDIVAL's Human Resources Area centralises aspects relating to the Institute's recruitment and labour relations.

## ○ Projects Area

### ○ Technicians

Beatriz García González (IDIVAL)  
Charo González Cabria (IDIVAL)  
Paloma González Álvarez (IDIVAL)  
Natalia Puente Fernández (IDIVAL)

IDIVAL's Projects Area combines all the resources necessary to manage grants promoted by IDIVAL itself, as well as to request, implement and justify funds, both public and private, received by IDIVAL research groups.

## ○ Innovation Area

### ○ Research Results Transfer Office (OTRI):

Patricia Zorrilla de la Fuente (IDIVAL)

### ○ Innovation Unit

Carlos Fernández Martínez (IDIVAL)  
Maria Wunsch Martínez (IDIVAL)

### ○ EVaTec® Programme

Laura Herrero Uriguén (IDIVAL)  
Marina Cano Iglesias (IDIVAL)

The Innovation Area includes a Results Transfer Office (OTRI), which is part of the OTRI network.

This area aims to promote, enhance and disseminate research results amongst society, encouraging the interaction of researchers with the corporate and social environment, the management of its patents and business creation. It carries out actions for the promotion of innovative culture, research and evaluation of technological solutions, preparation and drafting of R&D projects and the search for financing, as well as all activities needed to ensure that the R&D results of IDIVAL research groups and researchers from the Cantabria Health Services reach society through public-private partnerships. The Innovation Area also supports strategies for innovation in patient care and organisation through the EVaTec® programme, which uses human factor engineering techniques for assessing usability in medical technology selection and implementation processes and process redesign.

IDIVAL has an Innovation Area, which forms part of the ITEMAS Platform of the Carlos III Health Institute (ISCIII), a platform that has been coordinated nationwide by the IDIVAL Management Director, Galo Peralta, since July 2018.

## ○ Training and Methodology Support Area

IDIVAL, as part of its goal to strengthen and facilitate scientific training associated with research, provides library support to researchers and promotes, coordinates and performs training activities in this area throughout the year.

## ○ “Marquesa de Pelayo” Library

**Head Librarian:**

**Mario Corral García.** (IDIVAL)

The Marquesa de Pelayo Library is an active centre of biomedical information resources. Its mission is to contribute to raising the level of innovation and excellence in three fundamental areas of Cantabria's public healthcare system: clinical care, teaching, and research, by an intensive use of information and communication technologies. The Library is governed by IDIVAL

and provides support for the public healthcare system throughout Cantabria. The library facilities, consisting of a Great Hall, classroom, copy services room, study room, periodicals library, video library, depositories of less used and antique holdings, two storerooms, and an administration and management area, are located in the Marqués de Valdecilla University Hospital. The electronic library, Biblioteca Virtual Marquesa de Pelayo, offers all its services (inter-library loans, reference, etc.) and online resources (organised according to the Haynes Pyramid) via the IDIVAL website, with direct access to its catalogue. The Library was first opened in 1929, the second oldest and the first fully modern library of its kind in Spain, designed to become a National Library of Medicine, on the initiative of Dr Wenceslao López Albo, the first Managing Director of Casa de

Salud Valdecilla, under the patronage of María Luisa Gómez de Pelayo, Marquesa de Pelayo, the niece of Ramón Pelayo de la Torriente, Marqués de Valdecilla. Since then, it has been considered one of Spain's leading specialist libraries. In 2016 the library introduced a new platform providing access to its electronic resources, as part of the IDIVAL website, notably improving its accessibility.

## C Clinical Trial Area

The Clinical Trial Area includes a Clinical Trial Agency and a Clinical Trial Unit. The Agency provides support for

the management of clinical trials, and the Unit supports their performance. Both bodies are involved in advising, designing, evaluating, managing, implementing and executing clinical trials, including technical support for the Clinical Research Ethics Committee of Cantabria.

The Clinical Trial Area is part of the Platform for Clinical Research and Clinical Trial Units (SCREN, Spanish Clinical Research Network) promoted by the Carlos III Health Institute.

### C Clinical Trial Agency

**Spanish  
Clinical  
Research  
Network**

The agency offers its organisation and resources to researchers to promote reliable clinical trials that can guarantee the quality of the study, patient safety and data reliability. It also provides support to the Clinical Research Ethics Committee of Cantabria.

#### Technicians:

**Blanca del Pozo Fernández.**

(IDIVAL)

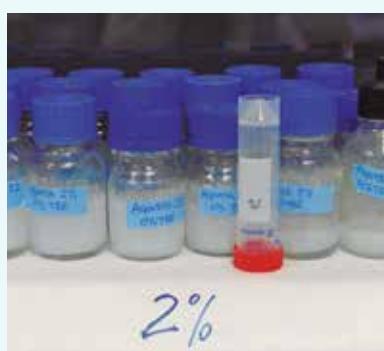

**Lorena Martín Guerra.**

(IDIVAL)

**Lucía Lavín Alconero.**

(IDIVAL)

### C Clinical Trial Unit

The IDIVAL Clinical Trial Unit, under the Clinical Pharmacology Department, located in the Marqués de Valdecilla University Hospital, has 250 m<sup>2</sup> of facilities equipped to care for nine patients simultaneously. It began operations in 2013, partially financed with funds from the Farmaindustria R&D programme.

Certified according to ISO 9001 standards. The Unit provides support for highly complex clinical trials in the Valdecilla environment.

In 2018, the Trials Unit started 29 new trials, four in phase I and 11 in phase II, with a total of 89 active trials at 16 different hospital services.

#### Team:

**María Blanca Sánchez Santiago.**

(Clinical Pharmacology Department,  
HUMV)

**María Ángeles de Cos.**

(Clinical Pharmacology Department,  
HUMV)

**Javier Adín Ibarra.**

(Clinical Pharmacology Department,  
HUMV)

**Noelia Martín Vega**

(Clinical Pharmacology Department,  
HUMV)

**Nuria Sánchez Avelló.**

(HUMV)

## ○ Technology Support Services Area

The Technology Support Services Area consists of four units: Biobank, Laser Microscopy Unit, Electron Microscopy Unit, Flow Cytometry and Cell Sorting Unit and Neuroimaging Unit.

### ○ Coordinator:

**María José Marín Vidal当地.**  
(IDIVAL).

## Valdecilla Biobank

The Valdecilla Biobank is a hospital biobank that manages human biological samples in order to support biomedical research, through the collection, processing, storage and transfer of samples and associated clinical data for research projects, all in the strictest conditions of quality control and confidentiality.

The Valdecilla Biobank is authorised by the Ministry of Health of the Government of Cantabria, and is registered in the ISCIII biobank register. It is organised into three Nodes according to the types of samples handled: the DNA and Fluids Node, located on the ground floor of the IDIVAL building, and the Solid Samples Node and the Neurological Tissues Node in the Anatomical Pathology Department of the Marqués de Valdecilla Hospital. They all have sample collections of pathologies of high scientific interest while providing a variety of services through the use of their equipment, offering

comprehensive support to researchers whose projects involve the use of human biological samples. In the 2018-2020 call for financing of the ISCIII AES Platforms, the Valdecilla Biobank was re-accepted as part of the National Registry of Biobanks (Plataforma Red Nacional de Biobancos, PRNB), with €93,060 in financing for this period.

The Valdecilla Biobank has held the ISO9001:2015 certification for quality management since 2015.

### ○ Scientific Director:

**Pascual Sánchez Juan.**  
(HUMV Neurology Department)

## DNA AND FLUIDS NODE

### ○ Coordinator:

**María José Marín Vidal当地.**  
(IDIVAL)

### ○ DNA and Fluids Group Technicians:

**Inés Santiuste Torcida.** (IDIVAL)  
**Jana Arozamena García** (IDIVAL)

## SOLID SAMPLES NODE

### ○ Coordinator:

**Santiago Montes Moreno.**  
(Anatomical Pathology Department,  
HUMV)

### ○ Solid Samples Group Technicians:

**José Bernardo Revert Arce.**  
(IDIVAL)

## NEUROLOGICAL TISSUES NODE

### Coordinator:

**Nuria Terán Villagrá.**  
(Anatomical Pathology Department,  
HUMV)

### Technician:

**Saray Pereda Marcos.**  
(IDIVAL)

## Microscopy Unit

IDIVAL's Microscopy Unit is on the ground floor of the IDIVAL building. This unit offers confocal laser scanning microscopy, fluorescence microscopy, time-lapse, transmission electron microscopy (TEM), etc., for in-house and external research groups, and advice on their different applications. It also provides specific training in microscopy and preparation of samples for researchers and support staff through courses accredited by the Government of Cantabria's Commission on Continuing Education.

To offer the laser and live cell microscopy service, the Unit features state-of-the-art equipment consisting of two sets of image systems, a confocal laser scanning microscope (CLSM) and a fully-automated TIRF combined Nikon A1R, which captures high-quality confocal images of cells and molecular events at high speed and sensitivity, live-cell equipment with a motorised NIKON Ti microscope

and is equipped with an epifluorescence module, incubation and micro-injection systems and an optical system to monitor fast processes in live cells.

The electronic microscopy department has a JEOL JEM1011 transmission electron microscope, equipped with a high-resolution digital camera which provides excellent image quality. This microscope permits the analysis of ultra-thin sections of cells and tissues, and the observation of microorganism preparations and macromolecular complexes with negative stain contrasting.

In 2018, IDIVAL incorporated a new Raman NRS-4500 laser spectrometer by Jasco.

**○ Scientific Coordinator, Laser Microscopy:**

**Mónica López Fanarraga.** (UC)

**○ Scientific Coordinator, Transmission Electron Microscopy:**

**Miguel Lafarga Coscojuela.** (UC)

**○ Technical manager:**

**Fidel Madrazo Toca.** (IDIVAL)

REMOA

## Cytometry and Cell Sorting Unit

The Flow Cytometry and Cell Sorting Unit (UCFSC) is in the IDIVAL building, located in the laboratory of the Transplantation and Autoimmunity Research group. This unit provides technical and methodological support in the use of flow cytometry and cell sorting, both for researchers at the centre and for any external group that needs it. It has an upgraded FACSAria II cytometer/sorter

(BD Biosciences), a CytoFLEX cytometer (Beckman Coulter) and an AutoMACS Pro Separator magnetic separator (Miltenyi Biotec) for the sorting of cell populations in sterile conditions.

Each year the UCFSC organises a flow cytometry course for both researchers and healthcare personnel.

Accredited by the Government of Cantabria Commission on Continuing Training.

### ○ Scientific Coordinator:

**Marcos López Hoyos.**  
(Immunology Department, HUMV)

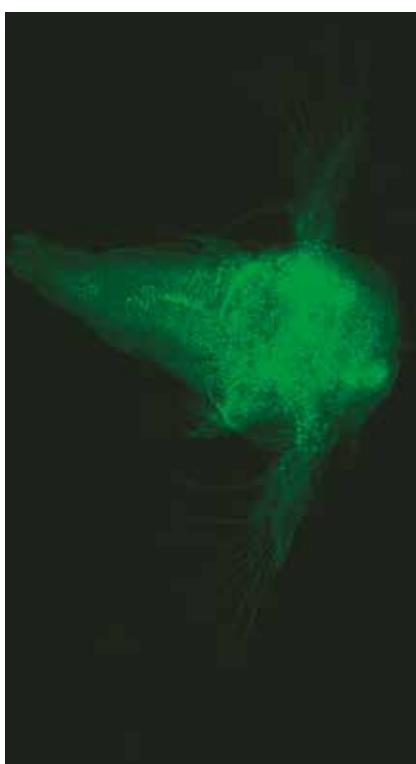

### ○ Technical Coordinator:

**David San Segundo Arribas.**  
(Immunology Department, HUMV)

### ○ Technical manager:

**David Merino Fernández.**  
(IDIVAL)

## Neuroimaging Unit

The neuroimaging laboratory, on the 2nd floor of the IDIVAL building, has implemented and developed a wide range of techniques for analysing images of the human brain obtained by magnetic resonance imaging (MRI), which the Unit offers IDIVAL researchers and external groups in order to provide technical and methodological support in the design and execution of scientific studies.

The analysis techniques employed can obtain quantitative data on important cerebral variables (volume of cerebral structures or areas, cortical thickness, gyration patterns, white matter structure, activity patterns, etc.) for the advancement of in vivo knowledge of the brain, and therefore, possible alterations in

severe mental illness, constituting a fundamental tool in brain research.

### ○ Scientific Coordinator:

**Benedicto Crespo Facorro.**  
(Psychiatry Department, HUMV)

### ○ Technicians:

**Diana Tordesillas Gutiérrez.**  
(CIBERSAM)

**Víctor Ortiz de la Foz.**  
(IDIVAL)

## Units supported by the University of Cantabria

IDIVAL has a number of facilities that the University of Cantabria offers its researchers, such as materials characterisation, chromatography, and animal housing and experimentation services.

**Animal housing and experimentation services** (SEEA)

**Materials characterisation service** (SERCAMAT)

**Optical transmission microscopy service** (SERMET)

**Supercomputing service**

**Hydrobiology laboratory**  
(Hydraulic research)

**Chromatography service**  
(SERCROM)

**Advanced microscopy** (IBBTEC)

**Mass sequencing service**  
(IBBTEC)

SAT UNITS	No. of requests	Service hours	* Scientific performance
FLOW CYTOMETRY	120	185	3
MICROSCOPY	299	817	16
NEUROIMAGING	5	1062,5	6

VALDECILLA BIOBANK	2018	Accumulated to 2018
Total samples included in the biobank	2547	33,539
No. sample transfer requests	11	166
Total samples transferred	10036	20,966
No. service requests	123	931
*Accumulated scientific performance	12	38

\* No. of publications that used services provided by the units or samples transferred by the Valdecilla Biobank.

## ○ IDIVAL Research Grants

IDIVAL has a line of research grants focusing on fostering talent. One of these programmes has a clear educational focus so the description of its activity is featured in the training section of this report. In 2018, IDIVAL announced and awarded the following grants:

- > **Inn-Val Grants.** Awarded to Innovation projects.
- > **Next-Val Grants.** Awarded to projects for young researchers.

- > **Ges-Val Grants.** A research management training scholarship.
- > **Prim-Val Grants.** Grants for primary healthcare research projects.
- > **Int-Val Grants.** For research intensification.
- > **Ment-Val Grants.** Mentoring programme for resident doctors.
- > **Support Grants.** Support programme for IDIVAL groups.
- > **Summer internships.** Student grants.
- > **Pre-doctoral contracts.** Combined IDIVAL-University of Cantabria contracts.
- > **Innplant Programme.** Programme to embed clinical researchers as Heads of Department at the Marqués de Valdecilla University Hospital.
- > **Wenceslao López Albo Post-MIR contracts programme** (described in the training section of the report).
- > **National call for "Enfermería Valdecilla" research projects.**
- > **Pre-doctoral mobility grants** for IDIVAL-UC pre-doctoral contract personnel.

The number and total amount of IDIVAL grants awarded in 2018 were as follows:

Programme	Priority	Budget (€)	Grants awarded
Post-MIR Programme	Post-Residency research training	109,667	1
Intensification	Prioritising research in healthcare personnel working in patient care	120,000	4
Mentoring	Specialists in training	32,000	4
Inplant Programme	Attracting new Heads of Department or Section	100,000	1
Research Managers	Research management training	93,365	2
Pre-doctoral programme	Pre-doctoral training	247,000	4
Next-Val Programme	New researcher projects	100,000	10
Inn-Val Programme	Innovation projects	100,000	11
Prim-Val Programme	Primary care projects	30,000	3
Support Programme	Support for the functioning of IDIVAL Groups	300,000	31
Summer Internships	Undergraduates in the biomedical field	3,200	4
Pre-doctoral mobility	Mobility grants for IDIVAL-UC pre-doctoral contract personnel	12,000	4
"Enfermería Valdecilla" research projects	Nursing research projects	4,000	1

## O Inn-Val Grants

In 2018, IDIVAL launched the fourth edition of the Inn-Val grants programme. This programme focuses on the development of innovative technological and healthcare projects in order to promote the transfer of

knowledge to society and the market, and to integrate external agents in the Valdecilla environment. The following projects were awarded grants in 2018:

Principal investigator	Project title	Amount granted (€)
Anchuelo Latorre, Javier Tomás	Impact of musical training on cognitive, functional and emotional variables in cancer patients with cognitive post-treatment effects	10,000
Maestre Alonso, José María	Implementation strategy for medical technology based on Human Factor engineering: the case of infusion pumps	9,480
Morales García, Dieter José	Determination of BRAF mutations by liquid biopsy in patients with suspected papillary thyroid carcinoma	8,000
Nistal Herrera, Juan Francisco	Design and assessment of small molecules similar to BMP-7 for the treatment of pathological cardiac remodelling	8,000
Ramos Vivas, José	Search and characterisation of lytic phages against clinically relevant hospital-acquired pathogens	10,000
Real Peña, Eusebio	Automated diagnosis of ophthalmological pathologies using OCT (DAPatOO)	12,500
Ruiz Arrebola, Samuel	Technique to optimise absorbed dose in intraoperative radiotherapy treatments	8,000
Suberviola Cañas, Borja	Gene transcription of human neutrophils as a tool to diagnose patients with sepsis	5,520
Valiente Barroso, Rafael	Multifunctional nanoparticles for treatment head/neck cancer with photo-induced hyperthermia	8,000
Vázquez Bourgon, Javier	Novel pharmacologic formulation of cannabidiol (CBD-loaded nanoparticles) and effect on antipsychotic-induced weight gain and related metabolic alterations	8,000
Viera Artiles, Jaime	System for improving spatial orientation in rigid optics endoscopy surgery	12,500

## ○ Next-Val Grants

In 2018 IDIVAL announced the fourth round of NEXT-VAL (NEXT generation VALdecilla) grants for the development of research projects led by new researchers from the

biohealthcare environment in Cantabria. The projects selected in 2018 were:

Principal investigator	Project title	Amount granted (€)
Casado Rojo, Alfonso	Retina and optic nerve analysis in patients with Alzheimer's	15,207
Cayón de las Cuevas, Joaquín	Gen-Ethics and Neuro-Ethics: Implementation of a bio-legal and bio-ethical framework for treatments to improve biology and bionics in humans	8,775
Cobo Sánchez, José Luis	Design and validation of an evaluation scale for the central venous catheter exit orifice for haemodialysis	7,200
González Legarreta, Lorena	Design of multifunctional nanoparticle for nanotheranostics (DiNMN)	8,775
Gozalo Margüello, Mónica	Burkholderia cepacia complex in cystic fibrosis: contribution of antibiotic resistance mechanisms and virulence factors.	16,250
Kislíkova, María	Changes in mean arterial matrix in the context of uremia and cardiovascular disease	11,250
Mora Cuesta, Víctor Manuel	Interstitial lung disease biomarkers: Implication of IL-6. General and functional study	11,228
Palanca Cuñado, Ana Rosa	Blood test for early diagnosis of escleroderma	12,025
Sarabia Cobo, Carmen María	Multi-component therapy in addressing moderate/mild dementia in patients and their careers: intervention in the Community Centres of Santander	5,788
Suárez Pérez, Angela	Effectiveness of transcutaneous neuromuscular electrical stimulation in the treatment of critical patients: randomised clinical trial	2,783

## GES-VAL grants

The Ges-Val programme aims to train research and innovation managers with an internship contract of up to two years in which they take on activities related to

monitoring, justifying and assessing research and innovation projects, including contract and human resources management. In 2018, two contracts were awarded to:

**María Díez Sánchez.**  
**Garazi Carbón Soto.**

## INT-VAL grants

The Int-Val programme (Intensification of research - Valdecilla) aims to release clinical practitioners with heavy research and/or innovation workloads from their other duties. IDIVAL funds the part-time or full-time substitution of doctors or nurses involved in research or innovation projects. Researchers benefiting from intensification grants in 2018 were:

**Jon Infante Ceberio.**  
Head of the Neurology  
Department of Marqués de Valdecilla University Hospital.  
**Duration: 6 months.**

**Benedicto Crespo Facorro.**  
Head of the Psychiatry  
Department of Marqués de Valdecilla University Hospital.  
**Duration: 6 months.**

**Marcos López Hoyos.**  
Head of the Microbiology  
Department of Marqués de Valdecilla University Hospital.  
**Duration: 6 months.**

**Marcos Gómez Ruiz.**  
Associate of the General Surgery  
Department of Marqués de Valdecilla University Hospital.  
**Duration: 6 months.**

## MENT-VAL grants

Through the Ment-Val mentoring programme for resident doctors, IDIVAL helps to attract new clinical professionals in training. The grant is for young, investigation-oriented resident doctors who are seeking excellence and are interested in

following a custom specialised healthcare training period as an introduction to research. The selected candidates were:

**Alba Fernández Rodríguez.**  
Resident in Intensive Medicine.

**Alejandro Aguilera Fernández.**  
Resident in Nephrology.

**Celia Garilleti Cámara.** Resident in Cardiology.

**Ignacio Setién Santiago.**  
Resident in Cardiology.

## Production Grants

In 2018, IDIVAL allocated funds for the operating costs of research groups, based on their activity in 2017. This grant was calculated considering the impact factor quartiles of each project in which a group member is the first or

last author, differentiating them from projects where authors from the group are neither the first nor last. The funds obtained by the group, the patents generated, RETIC or CIBER membership, participation in doctoral theses

and European projects, the existence of novice researchers, and the responsibility of any group members for any IDIVAL platform were also considered. The following production grants were allocated to IDIVAL groups in 2018:

Group	Amount in €
ANATOMICAL PATHOLOGY AND MOLECULAR PATHOLOGY	7,010
APOPTOSIS	3,133
CELL NUCLEUS BIOLOGY	4,209
CELL CYCLE, STEM CELLS AND CANCER	9,221
CYTOKINES AND GROWTH FACTORS IN THE PHENOMENA OF PATHOLOGICAL TISSUE PLASTICITY	6,180
CEPHALEA CLINIC AND GENETICS	6,943
HEALTHCARE LAW AND BIOETHICS	5,044
DIAGNOSIS AND TREATMENT USING IMAGING	2,765
NEURODEGENERATIVE DISEASES	16,711
GENETIC EPIDEMIOLOGY AND ATHEROSCLEROSIS IN SYSTEMIC INFLAMMATORY DISEASES	33,320
EPIDEMIOLOGY AND PATHOGENIC MECHANISMS OF INFECTIOUS DISEASES	10,694
TRANSLATIONAL HAEMATOLOGY	15,749
NANOVACCINES AND CELLULAR VACCINES BASED ON LISTERIA MONOCYTOGENES AND THEIR APPLICATIONS IN BIOMEDICINE	5,327
HEREDITARY HAEMORRHAGIC TELANGIECTASIA STUDY GROUP	2,934
CARDIOVASCULAR RESEARCH GROUP	10,266
PHOTONICS ENGINEERING	7,194
MOLECULAR IMAGING	6,536
INFECTION AND IMMUNITY AND DIGESTIVE PATHOLOGY	17,039
IMMUNOPATHOLOGY OF RHEUMATIC DISEASES	3,937
MELATONIN AND BREAST CANCER	2,828
MINERAL AND LIPID METABOLISM	11,332
CLINICAL AND MOLECULAR MICROBIOLOGY	9,417
NANOMEDICINE	18,955
HAEMATOLOGIC NEOPLASMS AND HAEMATOPOIETIC PROGENITOR CELL TRANSPLANTATION	14,841
NEUROPHYSIOLOGY IN EPILEPSY AND NEUROINTENSIVES	6,211
NEW TECHNIQUES IN ABDOMINAL SURGERY	3,048
PSYCHIATRY	17,437
TRANSPLANTATION AND AUTOIMMUNITY	12,707
CLINICAL TRIALS, MEDICAL ONCOLOGY AND PALLIATIVE MEDICINE UNIT	22,208
NURSING RESEARCH	4,322
COMMUNITY HEALTHCARE	2,481

 Valdecilla  
UNIVERSITY HOSPITAL

## Pre-doctoral fellowships

In 2018, IDIVAL partnered with the University of Cantabria to launch a new pre-doctoral fellowship programme, in which seven candidates were selected (four funded by IDIVAL and three by the University of Cantabria) for a fellowship of up to four years with the goal of completing their doctoral theses.

The selected candidates and their thesis directors in 2018 were:

- Pre-doctoral fellow: **Verónica Pulito Cueto**. Director: **Miguel Ángel González-Gay Mantecón** (HUMV)
- Pre-doctoral fellow: **David Salcines Cuevas**. Director: **Carmen Álvarez Domínguez** (IDIVAL)
- Pre-doctoral fellow: **Ana Belén Salido Medina**. Director: **Juan Francisco Nistal Herrera** (HUMV)
- Pre-doctoral fellow: **José Ramón Sánchez De La Torre**. Director: **Jon Infante Ceberio** (HUMV)

## Summer internships

IDIVAL, in partnership with the Institute of Biomedicine and Biotechnology of Cantabria (IBBTEC), funds summer internships for students in the biomedical and biotechnological fields at the IDIVAL research group laboratories. The grant funds an eight-week stay during the months of July, August

and September for students in their last year of undergraduate or master's degree studies in a biomedical subject (biology, biotechnology, nursing, pharmacy, medicine, dentistry, etc.) during the internship period. The students selected to work in the IDIVAL Group laboratories in 2018 were:

**Alex Mur Espinosa**  
**Carlos Wert Carvajal**  
**Maite Garraza Obaldia**  
**David Núñez Nepomuceno**

95° ETOH

80° ETOH

Wet Germ

**Training**

## Hospital sessions

This dissemination activity includes monthly scientific sessions which sees the participation of internationally renowned guests and IDIVAL researchers, who run sessions within the Marqués de Valdecilla University Hospital (HUMV) setting.

The 2018 weekly HUMV hospital sessions were the following:

### January:

**18:** "Commitment to quality at HUMV: Best in Class Awards 2017". J. Pascual; C. Fariñas; J.M. Rabanal; M Drake; J. Crespo; J.C. Ruiz San Millán.

### February:

**1:** "Auricular fibrillation, new approaches to classic arrhythmia. Dr Juan José Olalla Antolín-Head of the Cardiology Service Department".

**8:** "Male with abdominal pain, metabolic acidosis and acute renal failure", Julia Beatriz Gª Reyero-R2 Pathological Anatomy / Zaida Salmón Glez-R5 Internal Medicine.

**15:** "Strategies to improve quality and safety in at-risk or critical patients: future perspectives". Dr Mª Cruz Martín Delgado-Head of the Intensive Care Medicine Department H. U. Torrejón. Madrid-President of the Spanish Intensive Care Medicine and Coronary Unit Society (SEMICYUC).

### March:

**1:** "Current lines in healthcare and research in neuro-ophthalmology". Dr Alfonso Casado Rojo- Ophthalmology Department HUMV.

**8:** "ECMO. A system for gaining time or saving lives? Multidisciplinary approach". J.A Sarralde Aguayo- Cardiovascular Department HUMV and Camilo González Fernández- Intensive Care Medicine Department H. C. Asturias.

**15:** "The sick doctor care programme (PAIME): solidarity among doctors". José Ramón Pallas Álvarez - PAIME Coordinator at COMCantabria.

### April:

**12:** "Optimising the results of surgery in elderly adults to remove this space through Geriatric Medicine". Dr Jesús Pérez del Molino Martín (Head of Geriatrics Department). Dr Manuel Gómez Fleitas (Technological Innovation Coordinator HUMV Professor of Surgery) Dr Begoña Busta Vallina (Head of the Traumatology and Orthopaedics Department) Dr Trinitario Pina Murcia (Medical management, HUMV).

**19:** "Applications of cell therapy in tumour pathology and regenerative treatments". Juan Irure Ventura -R4 Immunology Department.

### May:

**3:** "Endometriosis, the enigma of a benign disease". Elena Prieto Ruiz R4 Obstetrics and Gynaecology Department.

**10:** "Multorgan failure in an immunosuppressed patient due to solid organ transplant". Lara Ruiz Martínez- R 3 Nephrology, Jorge Martínez-Echevarría Gil-Delgado. R 1 A P. Cristina Fernández Martínez. R3 Haematology.

**24:** "Let's avoid bad smoke together". Virginia Flor President of the Smoke-free hospital ethics committee, Carlos Amado Secretary, Cristina Renedo González.

### June:

**7:** "Presentation of the results of the HUMV's Clinical Commissions". Mario Domínguez Esteban-Library committee; Ana Batle López-Medical record and information systems committee; Aitziber Illaro Uranga-Infections and Antibiotics Policy Committee. Moderator. Concepción Fariñas Álvarez.

**8:** "Laparoscopic abdominal wall surgery in major outpatient surgery. Current reality and options for the future". Juan Manuel Suárez Grau- Digestive Department- Hospital Quirón Sagrado Corazón.

**14:** "Rehabilitation in amputated patients. Step by step". Dr Casar Associate Rehabilitation Doctor.

**21:** "Tribute to Dr Ramón Agüero. - Pulmonary fibrosis". Dr Ferrán Morell (Emeritus professor U A Barcelona).

### September:

**27:** "A Nobel medicine nominee in the hospital" (ORL). Dr Juan Manuel Espinosa Sánchez.

**28:** "University of Cantabria doctoral programme". Alberto Ruiz Jimeno - UC Vice Rector for Doctoral Studies.

### October:

**4:** "Can we trust claims from clinical trial reports?". Dr Stuart J. Pocock, Department of Medical Statistics, London School of Hygiene and Tropical Medicine, London.

**11:** "Current clinical contribution to nuclear medicine". Dr Remedios Quirce. Nuclear Medicine Associate HUMV.

**25:** "Minimally invasive monitoring. Clinical cases". Speaker Dr José Luis Rábago, HUMV.

### November:

**8:** "HAH, DMH and WH: The triple A". Dr Manuel Fernández Miera Hospital at Home HUMV.

**15:** "Fever and weakness: an unexpected result". Dr Iria Sanles R5 MI – Dr. J. L. Lozano Polo Internal Medicine Specialist HUMV.

**22:** "Developments in paediatric cardiology" Dr Viadero Associate Paediatrics Doctor HUMV.

### December:

**13:** "Use of systemic corticosteroids in community-acquired pneumonia". Karla Fabiola Escobar R3 - Sandra Tello R3 Pulmonology HUMV.

## ○ Training related to Support Unit Departments

Includes activities designed for researchers, organised and provided by Institute departments. In 2018,

the following activities were provided under this line:

### ○ Workshop: Patents, a key tool for research.

Patricia Zorrilla, Innovation Area (OTRI) IDIVAL.  
**30 January.**

### ○ 5th Flow Cytometry Course.

Clinical and research techniques and applications.  
David San Segundo (HUMV),  
Maria José Marín (Technological Services Coordinator, IDIVAL).

**4-7 June.**

## ○ Dissemination activities

### ○ IV Long Live Science Workshops (March 2018).

The workshops were given by IDIVAL research personnel were:

**DNA workshop.** DNA workshop. This workshop allowed students to work with DNA samples to study their quality. Using spectrophotometry they determined the concentration and purity of nucleic acids and analysed the integrity of the DNA using electrophoresis in agarose gel. They also studied functionality by using PCR to amplify fragments of X and Y chromosomes that provide information on the sex of the sample individual.

**Bacteria workshop.** The workshop consisted of analysing two biological samples of the students using microscopy to examine the different bacterial morphologies and their movement.

**Neuroimaging workshop.** In this workshop students examined a anthropomorphic dummy and processed the images acquired.

**Light and its Technologies helping Biomedical Engineering workshop.** This workshop presented the opportunities offered by light and its photonic technologies for diagnosing and treating diseases. Experiments were

conducted in relation to optical radiation parameters (refraction, absorption, polarisation, etc.) and experimental demonstrations were given of the equipment currently used to diagnose and treat diseases in the hospital environment.

### ○ Scientific Coffee organised by IFCA (Institute of Physics of Cantabria).

**José Ramos Vivas.**  
29 June 2018 "Healthcare scaremongering due to poor scientific practice".

**Carmen Saravia.**  
26 January 2018 "Brain and dark matter: the universe in the head".

### ○ First regional symposium of the Small World Initiative project (SWI@ SPAIN).

**6 September 2018**

### ○ 2018 Researchers' Night (28 September).

**Organised by:** the Scientific and Innovation Culture Unit of the University of Cantabria (UCC+i). IDIVAL took part in the 2018 Researchers' Night held on **28 September** with a series of workshops and visits to IDIVAL facilities:

**1) Guided tour:** "How do your cells talk to us?", by the **Pathological Anatomy Department of Marqués de Valdecilla Hospital.**

**2) Workshop:** "Your defences protect you from danger" by the IDIVAL Transplantation and Immunity group.

**3) Workshop:** "What do tests that assess intelligence and other cognitive domains consist of?" Workshop by the IDIVAL Psychiatry research group.

**4) Workshop:** "Would you like to see a research sample bank?" Workshop by Valdecilla Biobank personnel.

**5) Conference:** Nanovaccines: do vaccines serve a purpose? And nano what? What's that?, conference by the Nanovaccines and cellular vaccines based on Listeria monocytogenes and their applications in biomedicine research group.

IDIVAL also had a corporate stand in the Plaza Porticada where the "Genetic epidemiology and atherosclerosis in systemic inflammatory diseases" research group carried out different activities for visitors.

**Science Week  
(5-16 November 2018).**

**Organised by:** the Scientific and Innovation Culture Unit of the University of Cantabria (UCC+i) and the School of Science, in collaboration with the Spanish Foundation for Science and Technology (FECYT) and the Ministry of Science, Innovation and Universities.

Research Group and Technological Services activities organised by IDIVAL-UC-HUMV are briefly described below:

> Visit to the IDIVAL Microscopy Unit

> Visit to the Anatomical pathology and molecular pathology department of Marqués de Valdecilla University Hospital

> Visit to the IDIVAL Microbiology laboratory

> Visit to the Photonics Engineering department

**Workshop 1:** What is Internet? Where is Internet?

**Workshop 2:** What are the practical applications of light?

> Visit to the Transplantation and Autoimmunity Group

## ○ Collaborations with Universities

IDIVAL's research groups include 40 of the 132 associate professors working in the Marqués de Valdecilla University Hospital. Of the 26 professors from the University of Cantabria at the Marqués de Valdecilla University Hospital, 23 belong to IDIVAL groups.

In terms of training in the various fields related to research, IDIVAL researchers have collaborated on the organisation and implementation of training within different master's degree programmes:

### **Master's Degree in Molecular Biology and Biomedicine.**

University of Cantabria and University of the Basque Country  
**Director:** Dolores Delgado (Professor of Immunology. Department of Molecular Biology. University of Cantabria).

### **Master's Degree in Healthcare and Social Services Management.**

**Director:** David Cantarero Prieto (University Professor in the Area of Applied Economics, Area of Public Tax Authority, Department of Economics of the University of Cantabria).

### **Master's Degree in the Study and Treatment of Pain.**

Rey Juan Carlos University and University of Cantabria.

### **Master's Degree: Introduction to Mental Health Research.**

University of Cantabria; Complutense University of Madrid; Autonomous University of Barcelona; University of Barcelona and University of Cádiz in collaboration with CIBERSAM.

### **Innovation in Health.** An unavoidable opportunity.

**Directors:** Jesús Fernández Crespo (Director General of the Carlos III Health Institute), Alfonso Beltrán (Deputy Director General of International Research Programmes and Institutional Relations, Carlos III Health Institute), Galo Peralta Fernández (Management Director of IDIVAL). **2-4 July.** Annual landmark meeting in which IDIVAL collaborates with the Carlos III Health Institute.

## ○ Research Methodology

This section includes in-house training activities and programmes organised and financed directly by IDIVAL. In 2018, this section included the following activities:

### **3rd edition of the IDIVAL course on Good Clinical Practice.**

18-22 June 2018  
**Course Director:** Galo Peralta.  
**Duration:** 10 hours.

### **2nd edition of the Research Methodology course.**

12-16 November 2018. **Course Director:** Galo Peralta. **Duration:** 20 hours.

## Specialist Training

The Marqués de Valdecilla University Hospital is accredited to train internal medical residents in various specialisations, internal psychology

residents, internal pharmaceutical residents, internal biology residents, internal chemistry residents and internal midwifery nursing residents. In 2018, the Marqués de Valdecilla University Hospital offered 82 places in 40 specialisations for 2019 (Official State Gazette 223, 2018). Furthermore, the Marqués de Valdecilla University Hospital participated in the training of the 20 places offered for a specialisation

in Family and Community Medicine for the Santander Area and for four specialists in Occupational Medicine.

The medical specialisations accredited in the Marqués de Valdecilla University Hospital and the number of places offered in the last call for specialised health training were:

Specialisation	No.	Specialisation	No.
Allergology	1	Internal Medicine	4
Clinical Analysis	1	Nuclear Medicine	2
Pathological Anatomy	3	Microbiology and Parasitology	1
Anaesthesiology and Reanimation	6	Nephrology	2
Digestive System	2	Pulmonology	2
Clinical Biochemistry	3	Neurosurgery	1
Cardiology	3	Clinical Neurophysiology	2
Cardiovascular Surgery	1	Neurology	2
General and Digestive Surgery	2	Obstetrics and Gynaecology	3
Oral and Maxillofacial Surgery	1	Ophthalmology:	1
Orthopaedic Surgery and Traumatology	2	Medical Oncology	2
Thoracic Surgery	1	Radiation Oncology	1
Medical-Surgical Dermatology	1	Otorhinolaryngology	1
Endocrinology and Nutrition	1	Paediatrics and Specific Areas	5
Hospital Pharmacy	2	Clinical Psychology	1
Clinical Pharmacology	2	Psychiatry	3
Haematology and Haemotherapy	3	Radiodiagnostics	4
Immunology	2	Hospital Radiophysics	1
Physical Medicine and Rehabilitation	1	Rheumatology	2
Intensive Care Medicine	3	Urology	1

## ○ Training new clinical researchers

IDIVAL's training programme in healthcare-related research and innovation is specifically for residents who have completed their specialisation and is known as the

Valdecilla López Albo post-residency programme. It has been active since 2003 as a way to promote training, attracting and consolidating talent in the Marqués de Valdecilla University Hospital environment.

This nationwide call invites recently-trained specialists from any centre in the country to develop a research programme supervised by the

Marqués de Valdecilla University Hospital over up to three years that should include a stay at one or more renowned international centres. In 2018, IDIVAL offered a grant for a two-year contract to one specialist; the Post-Residency Valdecilla contracts of a further five specialists were active at some point during 2018.

### 2018 Call

**Ventura Irure, Juan.** Immunology specialist, trained at HUMV.  
**Tutor:** Marcos López Hoyos.  
**Project:** Immunomonitoring cancer patients receiving immunotherapy treatments.  
**Residency abroad:** Lowance Center, Atlanta, USA.  
**Duration:** 24 months.

### 2017 Call

**Velásquez Rodríguez, Carlos José.** Neurosurgery specialist, trained at HUMV.  
**Tutor:** José Luis Fdez Luna.  
**Project:** New prognosis markers in high-grade gliomas and feasibility study for developing an Outpatient Neuro-oncological Surgery programme at HUMV.  
**Residency abroad:** Division of Neurosurgery, Toronto Western Hospital, Canada.  
**Duration:** 24 months. (DURATION IN BOLD)  
**Ruiz Guerrero, Luis Javier.** Cardiology specialist.  
**Tutor:** Javier Zueco  
**Project:** Healthcare innovation project for the creation of an Inherited Cardiovascular Diseases Unit (UECF);

Cardiomyopathy, Aortopathy and Channelopathy, Preventing Sudden Death and Cardiopathy in Sport.  
**Residency abroad:** Department of Hereditary Cardiovascular Diseases, St George's Hospital, London.  
**Duration:** 24 months.

**Sánchez Escamilla, Miriam.** Haematology specialist.  
**Tutor:** Arancha Bermúdez  
**Project:** Immunotherapy against Lymphoid Neoplasms using T lymphocytes with a Design Antigen Receptor.  
**Residency abroad:** Haematopoietic Transplant Program. Memorial Sloan Kettering Cancer Center, New York.  
**Duration:** 24 months.

### 2016 Call

**Fabregat Borrás, Rosa.** Radiation Oncology specialist, trained at HUMV.  
**Tutor:** Pedro Prada.  
**Project:** Intraoperative radiotherapy as an innovation in healthcare treatment in the Public Health Service of Cantabria. Technical and clinical characteristics, methodology, dosage, and quality control.  
**Residency abroad:** Gregorio Marañón University Hospital (Madrid)  
European Institute of Oncology (Milan).  
**Duration:** 18 months.

### 2015 Call

**Kislíková, Mária.** Nephrology specialist, trained at HUMV.  
**Tutor:** Ángel Martín de Francisco.  
**Project:** Epigenetic Regulation of Arterial Smooth Muscle Phenotype in CKD-Associated Vascular Disease.  
**Stay abroad:** Dr David Wheeler.  
The UCL Centre for Nephrology, University College of London.  
**Duration:** 24 months.

## Doctoral theses. Doctoral Programmes

IDIVAL researchers participate in the two active doctoral programmes in the Faculty of Medicine of the University of Cantabria:

- > Doctorate in Molecular Biology and Biomedicine (coordinated by Dolores Delgado. The programme is quality accredited).
- > Doctorate in Health Sciences (currently coordinated by institute researcher Benedicto Crespo-Facorro).

IDIVAL training activity is reflected in doctoral theses.

In 2018, IDIVAL groups participated in a total of 15 doctoral theses, either through their direction or authorship. The adjoining table lists theses read or directed by IDIVAL personnel.

Author and directors	Title	University
María Amada Pellico López, David Cantarero Prieto, María Paz Zulueta	Characteristics and Impact of Bed-Blocking. Case studies and controls in Cantabria.	Cantabria
María Del Pilar Mollinedo Sedano, José Luis Fernández Luna, Alberto Gandarillas Solinis	Primary skin cells as an in vitro model for ADNP syndrome: a new variant of the autism spectrum.	Cantabria
Javier Isaac Lera Torres, Marta Pascual Saez, David Cantarero Prieto	Tests in health economics: healthcare use.	Cantabria
Patricia Moreno Mencía, David Cantarero Prieto	Essays about econometric model subjects. Sample selection and endogeneity in the field of health. Economics and labour.	Cantabria
Paloma Lanza León, Marta Pascual Saez, David Cantarero Prieto	Essays about health economics: inequality, poverty and polarization.	Cantabria
María Esther Setién Suero, María Rosa Ayesa Arriola	Longitudinal study on the consumption of cannabis in the first episodes of psychosis.	Cantabria
Susana Hernández García, Enrique María Ocio San Miguel, Teresa Paino	Assessment of the synergic effect of the Kinesin Spindle Protein inhibitor filanesib (arry-520) in combination with immunomodulatory drugs in preclinical multiple myeloma models.	Cantabria
María Lázaro Diez, José Ramos Vivas, Marcos López Hoyos	Clinically relevant host-pathogen key interaction in acinetobacter species.	Cantabria
Jessica Alonso Molero, Antonio José Molina De La Hoz, Vicente Martín Sánchez	Peroxisome proliferator-activated receptor gamma coactivator 1 (pgc1) interactions and environmental factors in the development of colorectal cancer.	Cantabria
Rut Molinuevo Llaria, Alberto Gandarillas Solinis	Molecular control of the differentiation mitosis checkpoint of keratinocytes in response to DNA damage.	Cantabria
Eloísa González Lavado, Mónica López Fanárraga	Antitumour drug nanodispensers based on carbon nanotubes: design, assessment and biocompatibilisation.	Cantabria
Asier García Escarzaga, Igor Gutiérrez Zugasti, Adolfo Cobo García	Paleoclimate and the use of coastal resources during the Mesolithic in the region of Cantabria.	Cantabria
Marta Muñoz Ruiz, Ramón Merino Pérez, Jesús Merino Pérez	Role of BAMBI in the immune response of mucosa and in the development of inflammatory intestinal pathology and secondary neoplasms.	Cantabria
Isabel De Pedro González, Alberto Gandarillas Solinis	Role of Cdk1 mitosis kinase inhibitors in epidermoid differentiation.	Cantabria
María Juncal Ruiz, Benedicto Crespo Facorro, Marcos López Hoyos	Systemic immunoinflammatory response in subjects with a first psychotic episode	Cantabria

## ○ Progress Reports

This programme began as a joint initiative by the Biomedical Research Forum of Cantabria, consisting of researchers from IDIVAL, the University of Cantabria and the Institute of Biology and Biomedicine of Cantabria, as a continuation of the programme of research seminars presented by young researchers, in collaboration with clinical and basic researchers.

The 2018 programme included the following seminars, held at the Marqués de Valdecilla University Hospital.

### ○ Thursday 18/01/2018

**Speaker:**

**Fulgencio Russo Julve.**

Pre-doc of the IDIVAL Psychiatry research group.

**Title:** Drug-Induced modulation of Clinical Response Genes to Antipsychotics (CRGAs) in Schizophrenia: integrating insights from human and cellular transcriptome.

**Speaker:**

**Sara Remuzgo Martínez.**

Member of the Genetic Epidemiology and Atherosclerosis in Systemic Inflammatory Diseases research group.

**Title:** Transcriptional study of genes associated with rheumatoid arthritis and cardiovascular disease.

### ○ Wednesday 14/02/2018

**Speaker:**

**Nerea Iturrioz Rodríguez**

Pre-doc of the IDIVAL Nanomedicine research group.

**Title:** Carbon nanotube coated particles as a possible delivery system.

**Speaker:**

**Inmaculada Concepción Pérez del Molino Bernal.**

Member of the HUMV Microbiology Department. **Title:** Mycobacterium

tuberculosis complex genotyping techniques.

### ○ Wednesday 14/03/2018

**Speaker:**

**Javier Vázquez Bourgon**

Associate Professor of Psychiatry at the University of Cantabria.

**Title:** Searching for early biomarkers of long-term hepatic alterations in non-affective psychosis.

**Speaker:**

**Leticia de las Vecillas Sánchez**

Specialist Doctor in the HUMV Allergology Area.

**Title:** Drug hypersensitivity and desensitization: mechanisms and new approaches.

### ○ Wednesday 11/04/2018

**Speaker:**

**María Iglesias Escudero**

Pre-doc of the IDIVAL Autoimmunity and Transplantation research group.

**Title:** Utility of myeloid-derived suppressor cells (MDSC) in monitoring renal transplant patients.

**Speaker:**

**Maria Carcelen Labrador**

Pre-doc of the IDIVAL Cytokines and Growth Factors in the Phenomena of Pathological Tissue Plasticity research group.

**Title:** MicroRNAs and neuropathic pain.

### ○ Wednesday 16/05/2018

**Speaker:**

**Ángela Puente Sánchez**

Specialist doctor in the Hepatology unit of the HUMV Digestive System Department.

**Title:** Liver fibrosis regression after hepatitis C eradication.

**Speaker:**

**Catalina Díaz Ríos**

Pre-doc of the IDIVAL Epidemiology and Pathogenic and Molecular Mechanisms of Infectious Diseases and Clinical Microbiology research group.

**Title:** Pseudomonas aeruginosa in cystic fibrosis: Evolution of the type VI secretion system (T6SS). Identification and functional characterisation of new T6SS components.

### ○ Wednesday 13/06/2018

**Speaker:**

**Elena Navarro Palomares**

Pre-doc of the IDIVAL Nanomedicine research group.

**Title:** Coating and functionalization of nanoparticles for biomedical applications.

### ○ Wednesday 24/10/2018

**Speaker:**

**Carmen Lage Martínez**

Pre-doc of the IDIVAL Neurodegenerative Diseases research group. **Title:** Automated evaluation of eye movement and diagnostic utility in neurodegenerative diseases.

**Speaker:**

**Nuria García Díaz**

Pre-doc of the IDIVAL Translational Haematology research group.

**Title:** Deregulated mechanisms downstream of PLCG1 promoting cutaneous T cell lymphoma progression.

### ○ Wednesday 14/11/2018

**Speaker:**

**Luis Ruiz Guerrero**

Specialist doctor in the HUMV Cardiology Department.

**Title:** A family cardiovascular disease consultation.

**Speaker:**

**Ana Freije León**

Member of the IDIVAL Cell Cycle, Stem Cells and Cancer research group.

**Title:** New prognostic targets in oropharynx epidermoid carcinoma.

### ○ Wednesday 12/12/2018

**Speaker:**

**Marta Drake Pérez**

Specialist doctor in the HUMV Radiodiagnostics Department.

**Title:** Clinical applications of Synthetic MRI.

**Speaker:**

**Eloisa González Lavado**

Pre-doc of the IDIVAL Nanomedicine research group.

**Title:** Biodegradable carbon nanotubes maintain their antitumour effect.

## O Student training

The Public Health System of Cantabria has 171 Associate Professors in Health Sciences and 118 Full Professors and Professors at the University of Cantabria.

**1. Undergraduate Studies in Medicine at the University of Cantabria.** Courses at the Marqués de Valdecilla University Hospital cover students of the Faculty of Medicine in their third, fourth, fifth and sixth year of medical studies. The number of students enrolled in these courses in 2018 whose training involves the Marqués de Valdecilla University Hospital is as follows: 4th year of Medical Studies: 122, 5th year of Medical Studies: 168, 6th year of Medical Studies: 107

**2. Summer internship programme.** In 2013, IDIVAL, in collaboration with the Institute of Biomedicine and Biotechnology of Cantabria, launched a grant programme for students studying an undergraduate degree or diploma in any biomedical discipline (Biology, Biotechnology, Nursing, Pharmacy, Medicine, Dentistry, etc.) to spend a summer working in the laboratories of IDIVAL groups, a programme that has continued since then. The students awarded the grant and the research group in which they worked during the summer of 2018 appear in the IDIVAL grants section.

## O Santander Biomedical Lectures

The Biomedical Research Forum of Cantabria, consisting of Cantabria Healthcare Services, the Marqués de Valdecilla Research Institute (IDIVAL), the University of Cantabria and the Institute of Biomedicine and Biotechnology of Cantabria launched in 2016 the SANTANDER BIOMEDICAL LECTURES programme, a series of lectures intended to advance worldwide Biomedical knowledge.

Prestigious researchers at the top of the field worldwide are invited to lecture.

These lectures were an initiative of scientists at the different research centres of Cantabria to create a forum for discussing current advances in biomedicine, in which some of our region's research groups play a leading role.

They will also be a discussion forum for young researchers and healthcare personnel in our hospitals, and for the general public, and an opportunity to establish partnerships. The lectures in this programme in 2018 were:

**Thursday 25/01/2018**

**Speaker:**  
**Jose A. Bengoechea**  
 Director, Wellcome-Wolfson Institute of Experimental Medicine - Queen's University Belfast – UK  
**Title:** Superbugs: myth, reality or the new cell biologists.

**Thursday 22/02/2018**

**Speaker:**  
**Denis Duboule**  
 École Polytechnique Fédérale de Lausanne - Switzerland  
**Title:** The control of Hox Genes; From Mammalian Development to Human Genetic Syndromes.

**Thursday 22/03/2018**

**Speaker:**  
**Bente Langdahl**  
 Department of Endocrinology and Internal Medicine - Aarhus University Hospital - Aarhus – Denmark  
**Title:** New clinical, genetic and pharmacogenetic approaches to bone disorders.

**Thursday 26/04/2018**

**Speaker:**  
**Jorge Galán**  
 Director, Department of Microbial Pathogenesis - Yale University - School of Medicine - New Haven, Connecticut – USA  
**Title:** Pathogen restriction and host specificity: insights from the human pathogen *Salmonella Typhi*.

○ Thursday 31/05/2018

**Speaker:**

**Fernando J. Corrales**

Senior Scientist and head of the Proteomics Laboratory at the National Biotechnology Centre, CSIC

**Title:** Applications of proteomics in biomedicine.  
Mechanisms and biomarkers in liver disease.

○ Thursday 28/06/2018

**Speaker:**

Juan Ignacio Aróstegui  
Head of the unit of autoinflammatory diseases in the Immunology Service of the Hospital Clínic

**Title:** Diagnostic developments and rational bases of new treatments for inherited autoinflammatory diseases

○ Thursday 18/10/2018

**Speaker:**

Solomon Dadia  
Deputy Director of Orthopaedic Oncology Dept & Head of Surgical 3D Printing Lab, Tel Aviv Medical Center.

**Title:** New trends in 3D printing.

○ Thursday 29/11/2018

**Speaker:**

José Alcamí  
Director of the Immunopathology Unit of AIDS. ISCIII.

**Title:** HIV cure, the next frontier.

○ Thursday 20/12/2018

**Speaker:**

Jordi Vila  
Head of the Department of Clinical Microbiology - Clinic Hospital - University of Barcelona. Research Professor of the Institute of Global Health Barcelona.

**Title:** Acinetobacter baumannii paradigm of pan-resistance: future alternatives for treatment.

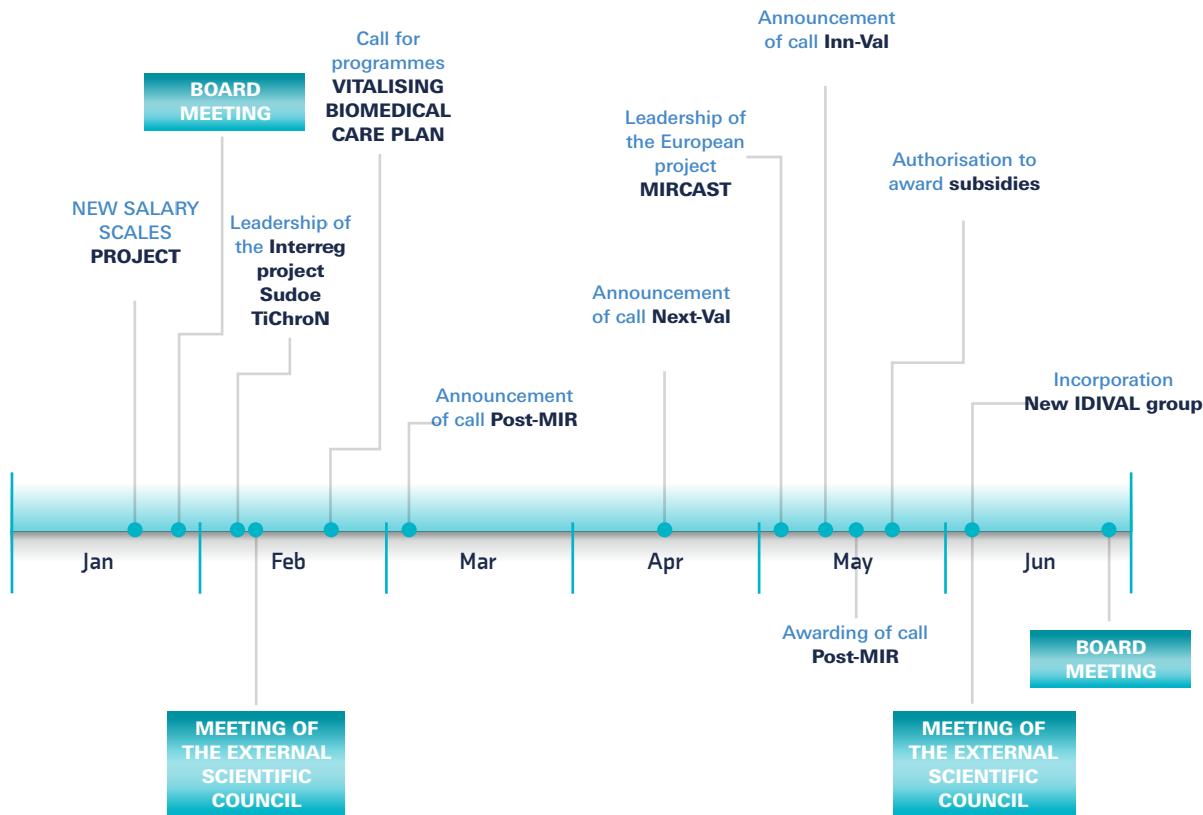

24/02/16

**○ A few  
milestones  
in 2018**

## ● January / June

## ● July / December

## ○ IDIVAL in the media

In 2018, the presence of IDIVAL in the media was relevant, as shown by numerous website visits, over 125,000 impacts for the IDIVAL brand and more than 2,800 accumulated news articles on the Google search engine at the time of publishing this report. IDIVAL has a shared audiovisual portal with the Marqués de Valdecilla University Hospital and the Valdecilla Virtual Hospital, the Somos Valdecilla Platform ([www.somosvaldecilla.org](http://www.somosvaldecilla.org)) and Social Networks on this platform, in addition to having its own accounts and presence on Twitter (@IDIVALdirección with more than 2,000 followers).

## ○ News stories from 2018

### ○ Cantabria leads a European healthcare project for the first time

The Office for Chronic Disease of the Cantabrian Health Service (CHS), in collaboration with the Valdecilla Healthcare Research Institute (IDIVAL), has led a European research project for the first time, focusing on healthcare innovation in chronic paediatric diseases.

Entitled the 'TiChroN Project', this project aims to bring new approaches associated with promoting health and improving care to children with chronic diseases, based on the use of new technologies, informed the Government in this press release. With a budget of 760,833 euros, financed from the European

Union 'Interreg SUDOE' programme, the project is one of 21 proposals approved of the 357 submitted between Spain, France and Portugal.

### ○ IDIVAL announces the annual call of the Vitalising Biomedical Care Plan

The plan includes 10 programmes which, as a whole, prioritise talent, internationalisation and innovation, with special emphasis in Primary Care and Nursing. It is structured into three project programmes (NextVal, for new researchers; InnVal, to develop research projects; and PrimVal, for Primary Care projects); two programmes for attracting talent (Mentoring, junior programme for new residents; and Innplant, senior programme for new department or section heads joining the Marqués de Valdecilla University Hospital from other centres); a programme to promote clinical researchers (intensification modality A and B), a pre-doctoral mobility programme and a research group support programme (Support).

### ○ IDIVAL leads the ITEMAS platform for innovation in medical and health technologies

Dr Galo Peralta, Management Director of IDIVAL, has been named National Coordinator for the Platform for Innovation in Medical and Health Technologies.

After eight years in operation, ITEMAS has consolidated Innovation Support Unit formed by experts who support innovation in Spain's main hospitals; it receives financing from the Carlos III Health Institute.

The overall objective of the ITEMAS platform is to promote a culture of innovation and facilitate the detection, management and enhancement of scientific and healthcare

knowledge in the field of medical and health technologies. For this purpose, ITEMAS tries to create value and improve the efficiency of the healthcare system, understanding that healthcare professionals and their environment have major capacities to generate knowledge and products from that knowledge.

### ○ IDIVAL and UC agree to openly disseminate their research publications

The Valdecilla Research Institute (IDIVAL) and the University of Cantabria (UC) have agreed to openly disseminate the results of their research publications in the university's institutional repository, UCrea. The Regional Minister for Health, María Luisa Real, and Rector of the University of Cantabria (UC), Ángel Pazos, have signed a collaboration agreement.

Signing this document establishes the mechanisms necessary for IDIVAL to use the 'UCrea Investigación' repository to conserve and disseminate with open access the publications of its researchers. The publications will always be scientific and a result of research work involving IDIVAL personnel.

### ○ New infection risk markers in lung transplant patients

Researchers from the Marqués de Valdecilla University Hospital and IDIVAL have taken part in a study recently published in The Journal of Heart and Lung Transplantation. This multi-centre paper involving IDIVAL and the Gregorio Marañón, 12 de Octubre, Puerta de Hierro, Val d'Hebron and La Fe hospitals. The work extends the spectrum of hypogammaglobulinemia, especially IgC, as a risk factor of infectious complications observed in other types of solid organ transplants, such as the heart. Its importance lies in that,

by measuring immunoglobulin levels in Immunology laboratories easily in clinical practice during the first days after the lung transplant, pulmonologists can adopt useful decisions to prevent infections and avoid subsequent complications.

**● IDIVAL is authorised to award subsidies by the Government of Cantabria**

With an authorisation of the Government of Cantabria, IDIVAL acquires authority to award subsidies in compliance with current state regulations.

This generic authorisation must be followed by an authorisation based on each subsidy that IDIVAL will award before publication; they must be published in the national subsidy database.

**● Biodegradable carbon nanotubes trigger antitumour effects**

The University of Cantabria-IDIVAL nanomedicine group has proven in a publication in the Nanoscale journal how certain chemical treatments improve the elimination of nanomaterials by *in vitro* and *in vivo* reticuloendothelial system cells in the peritumoral region once they have exerted their antitumour action. These results lead to new hopes in treating cancer where applying carbon nanotubes and other nanomaterials would significantly amplify the effects of traditional drugs to inhibit the microtubule dynamic by reducing cell resistance, the reappearance of tumours and, in short, improving survival in cancer patients.

**● Ramales Council sponsors IDIVAL research**

Ramales de la Victoria Town Council has donated 8,000 euros to the Marqués de Valdecilla Research Institute - IDIVAL. The funds come from the charity registration of participants in the

2nd Charity Walk against Cancer, a charitable sporting event that gathered 1,500 participants on 9 June and which was possible thanks to the collaboration of the Council and the Regional Ministry of Education, Culture and Sport of the Government of Cantabria. This donation will contribute to the research projects of Dr Prada Gómez, Head of the Radiotherapy Oncology Department at the Marqués de Valdecilla University Hospital.

**● IDIVAL researchers discover a novel mechanism that is key for the development of chronic pain**

The IDIVAL research group in which includes María A. Hurlé, Professor of Pharmacology at the University of Cantabria, has described the critical role of microRNA-30c in the development of a variety of chronic and extremely incapacitating pain called neuropathic pain.

The paper published in a high-impact journal, *Science Translational Medicine*, reveals a novel mechanism mediated by microRNA-30c, which is key for the development of chronic neuropathic pain.

Treating animals with a molecule that neutralises microRNA-30c effectively combats neuropathic pain through a mechanism, mediated by TGF-beta, which improves the function of the natural system mammals have to protect against pain, exerted by endogenous opiodes. This grants microRNA-30c potential value as a biomarker for this pathology which is often difficult to diagnose clinically.

**● Presentation of Results of the First Symposium of the Small World Initiative Project**

The first Small World Initiative Project held in our region took place on 6 September and was

organised by IDIVAL and the University of Cantabria.

This project aims to involve Secondary and Baccalaureate students in a real research project with a society service-learning strategy to solve the problem of increased infectious diseases caused by bacteria resistant to antibiotics. In Spain, in addition to IDIVAL, this international programme is run in 17 SWI@Spain National Network research centres and universities.

**● Presentation 3rd Santander Biomedical Lectures**

Following the success of the previous editions of Santander Biomedical Lectures, the speakers at the third round of lectures are presented, including researchers renowned worldwide for their international contributions. In the line of previous years, this new edition, to be held from October 2018 to June 2019, will focus on a series of lectures dedicated to the progress of world knowledge in Biomedicine.

**● UIMP meeting: Innovation in Health, a vital opportunity**

Once again, the Carlos III Health Institute and IDIVAL are organising a summer meeting at the Menéndez Pelayo International University in Santander, which this time will focus on aspects related to innovation in health, closely related to the actions carried out by the Platform for Innovation in Health Technologies, which belongs to the Carlos III Health Institute (ITEMAS).

The meeting, which has become an essential date in the annual events calendar for health research and innovation and involves some of the main names in innovation in health in our country, will present healthcare innovation organisation models

from other countries, such as the Irish or German model, or the Medstar model in Washington. Round tables will also tackle issues such as sustainability, entrepreneurship, new technologies, value contributed by innovation and success stories.

#### ○ Valdecilla Cohort for the study of memory and Cognitive Impairment

The Cognitive Impairment Unit of the Marqués de Valdecilla University Hospital Neurology department, led by Dr Pascual Sanchez-Juan, launched the Valdecilla cohort in August for the study of memory and brain ageing. This project aims to study the evolution of a group of volunteers comprising patients with cognitive deterioration and healthy individuals, all aged over 55, in order to understand which factors help predict each person's risk of developing dementia, especially Alzheimer's.

The study was launched thanks to a collaboration with SIEMENS HEALTHINEERS with the participation of other Hospital services, such as Ophthalmology, Nuclear Medicine or Radiology, in addition to IDIVAL and the movement analysis laboratory of the Gimbernat Cantabria University School. Detailed analyses will be conducted with molecular imaging, magnetic resonance imaging and neurocognitive tests; genetic and environmental factors will also be studied.

#### ○ Genetics helps to figure out the key components of fracture risk

A major international collaboration with the participation of José Antonio Riancho, IDIVAL Researcher, Head of the Internal Medicine Department of the Marqués de Valdecilla University Hospital and Professor at the University of Cantabria, has identified 15 genetic variants related to the

risk of suffering osteoporotic fractures, a significant health problem affecting over 9 million people in the world each year. The collaboration took another step forward and used genomic information on other risk factors to examine their role in causing fractures. Researchers found that only bone mineral density and muscle strength are directly involved in susceptibility to fracture.

The findings propose that interventions aimed at increasing bone mass and muscle function are more likely to prevent fractures than the general administering of calcium and vitamin D supplements.

#### ○ The genetic profile of each patient can predict the effectiveness of antipsychotic treatment in schizophrenia

The collaborative research project recently published in the American Journal of Psychiatry by the Marqués de Valdecilla University Hospital-IDIVAL-CIBERSAM schizophrenic research group together with the Zucker Hillside Hospital (New York) and the international EUFEST consortium, used the global genetic fingerprint of patients and highlighted that the efficacy of antipsychotic treatment will have in patients can be partially predicted.

"Patients with low genetic risk are twice as likely to respond than those with high genetic risk". The findings may be of great interest in making clinical decisions and have been replicated in three independent patient cohorts.

#### ○ Assessment of the therapeutic impact of PET/CT with $^{11}\text{C}$ -Choline in the reappearance of prostate cancer

In a study published in Nuclear Medicine Communications, the official publication of the British Nuclear Medicine Society, a journal with a high impact

and international prestige, the Marqués de Valdecilla University Hospital Nuclear Medicine Department has communicated the results of patients with recurring biochemistry of prostate cancer following initial curative treatment. All patients had a positive PET/CT with  $^{11}\text{C}$ -Choline. The production and synthesis of the  $^{11}\text{C}$ -Choline radiotherapy drug was conducted at the Nuclear Medicine Department Radiopharmacy Unit. The primary objective of the study was to determine the effect that result had on the clinical management of patients. Results showed a change in the clinical attitude expected in two thirds of patients (66.1%). As an added value, PET/CT with  $^{11}\text{C}$ -Choline identified a second unexpected neoplasm in 4.5% of patients (4 lung cancer and 1 colon cancer).

#### ○ Epigenetic therapy in hepatocellular carcinoma

Researchers from CIMA (Applied Medical Research Centre of the University of Navarra), led by doctors Ávila and Fernández-Barrena, publish an interesting paper in Hepatology, the official publication of the American Association for the Study of Liver Diseases (AASLD), one of the main international journals in the field. In this paper on experimental models such as over-expression of G9a and DNMT1 histone methyltransferase correlates with a poorer prognosis of hepatocellular carcinoma. By selectively inhibiting these two enzymes with the CM-272 drug we observe a powerful effect in terms of cell proliferation and tumour growth. This drug is especially effective in hypoxia, which is extremely relevant as CM272 interferes with the adaptation process of tumour angiogenesis. This treatment also appears to have antifibrotic properties on the liver.

**IDIVAL is at the forefront of national medical research in microscopy**

The Valdecilla Healthcare Research Institute (IDIVAL) has consolidated its position at the forefront as a national benchmark in microscopy by incorporating a RAMAN confocal image microscope, an addition to existing high-end electronic and confocal microscopy equipment. This new microscope lends speed in detecting the structure and biochemical composition of any organic or inorganic element, ease of use as the sample need

not be set, and the possibility of working with very small volumes.

**MIRCAST project, a European study led by IDIVAL**

The ultimate goal of MIRCAST is the prospective assessment of post-operative recovery, hospital stay, wound complications, serious complications and medium-term results (hernia, recurrence, etc.) of minimally invasive right colectomy, comparing intracorporeal anastomosis with extracorporeal, and comparing

conventional laparoscopic instruments with robotics. A network of more than 55 professionals and hospitals from eight European countries (Spain, France, Italy, Germany, United Kingdom, Finland, Denmark and Holland) will take part in MIRCAST, led by Dr Marcos Gómez from the Marqués de Valdecilla University Hospital.

**New tools for diagnosing and treating hepatocellular carcinoma**

A multidisciplinary team comprised of researchers from the Marqués de Valdecilla University Hospital, the

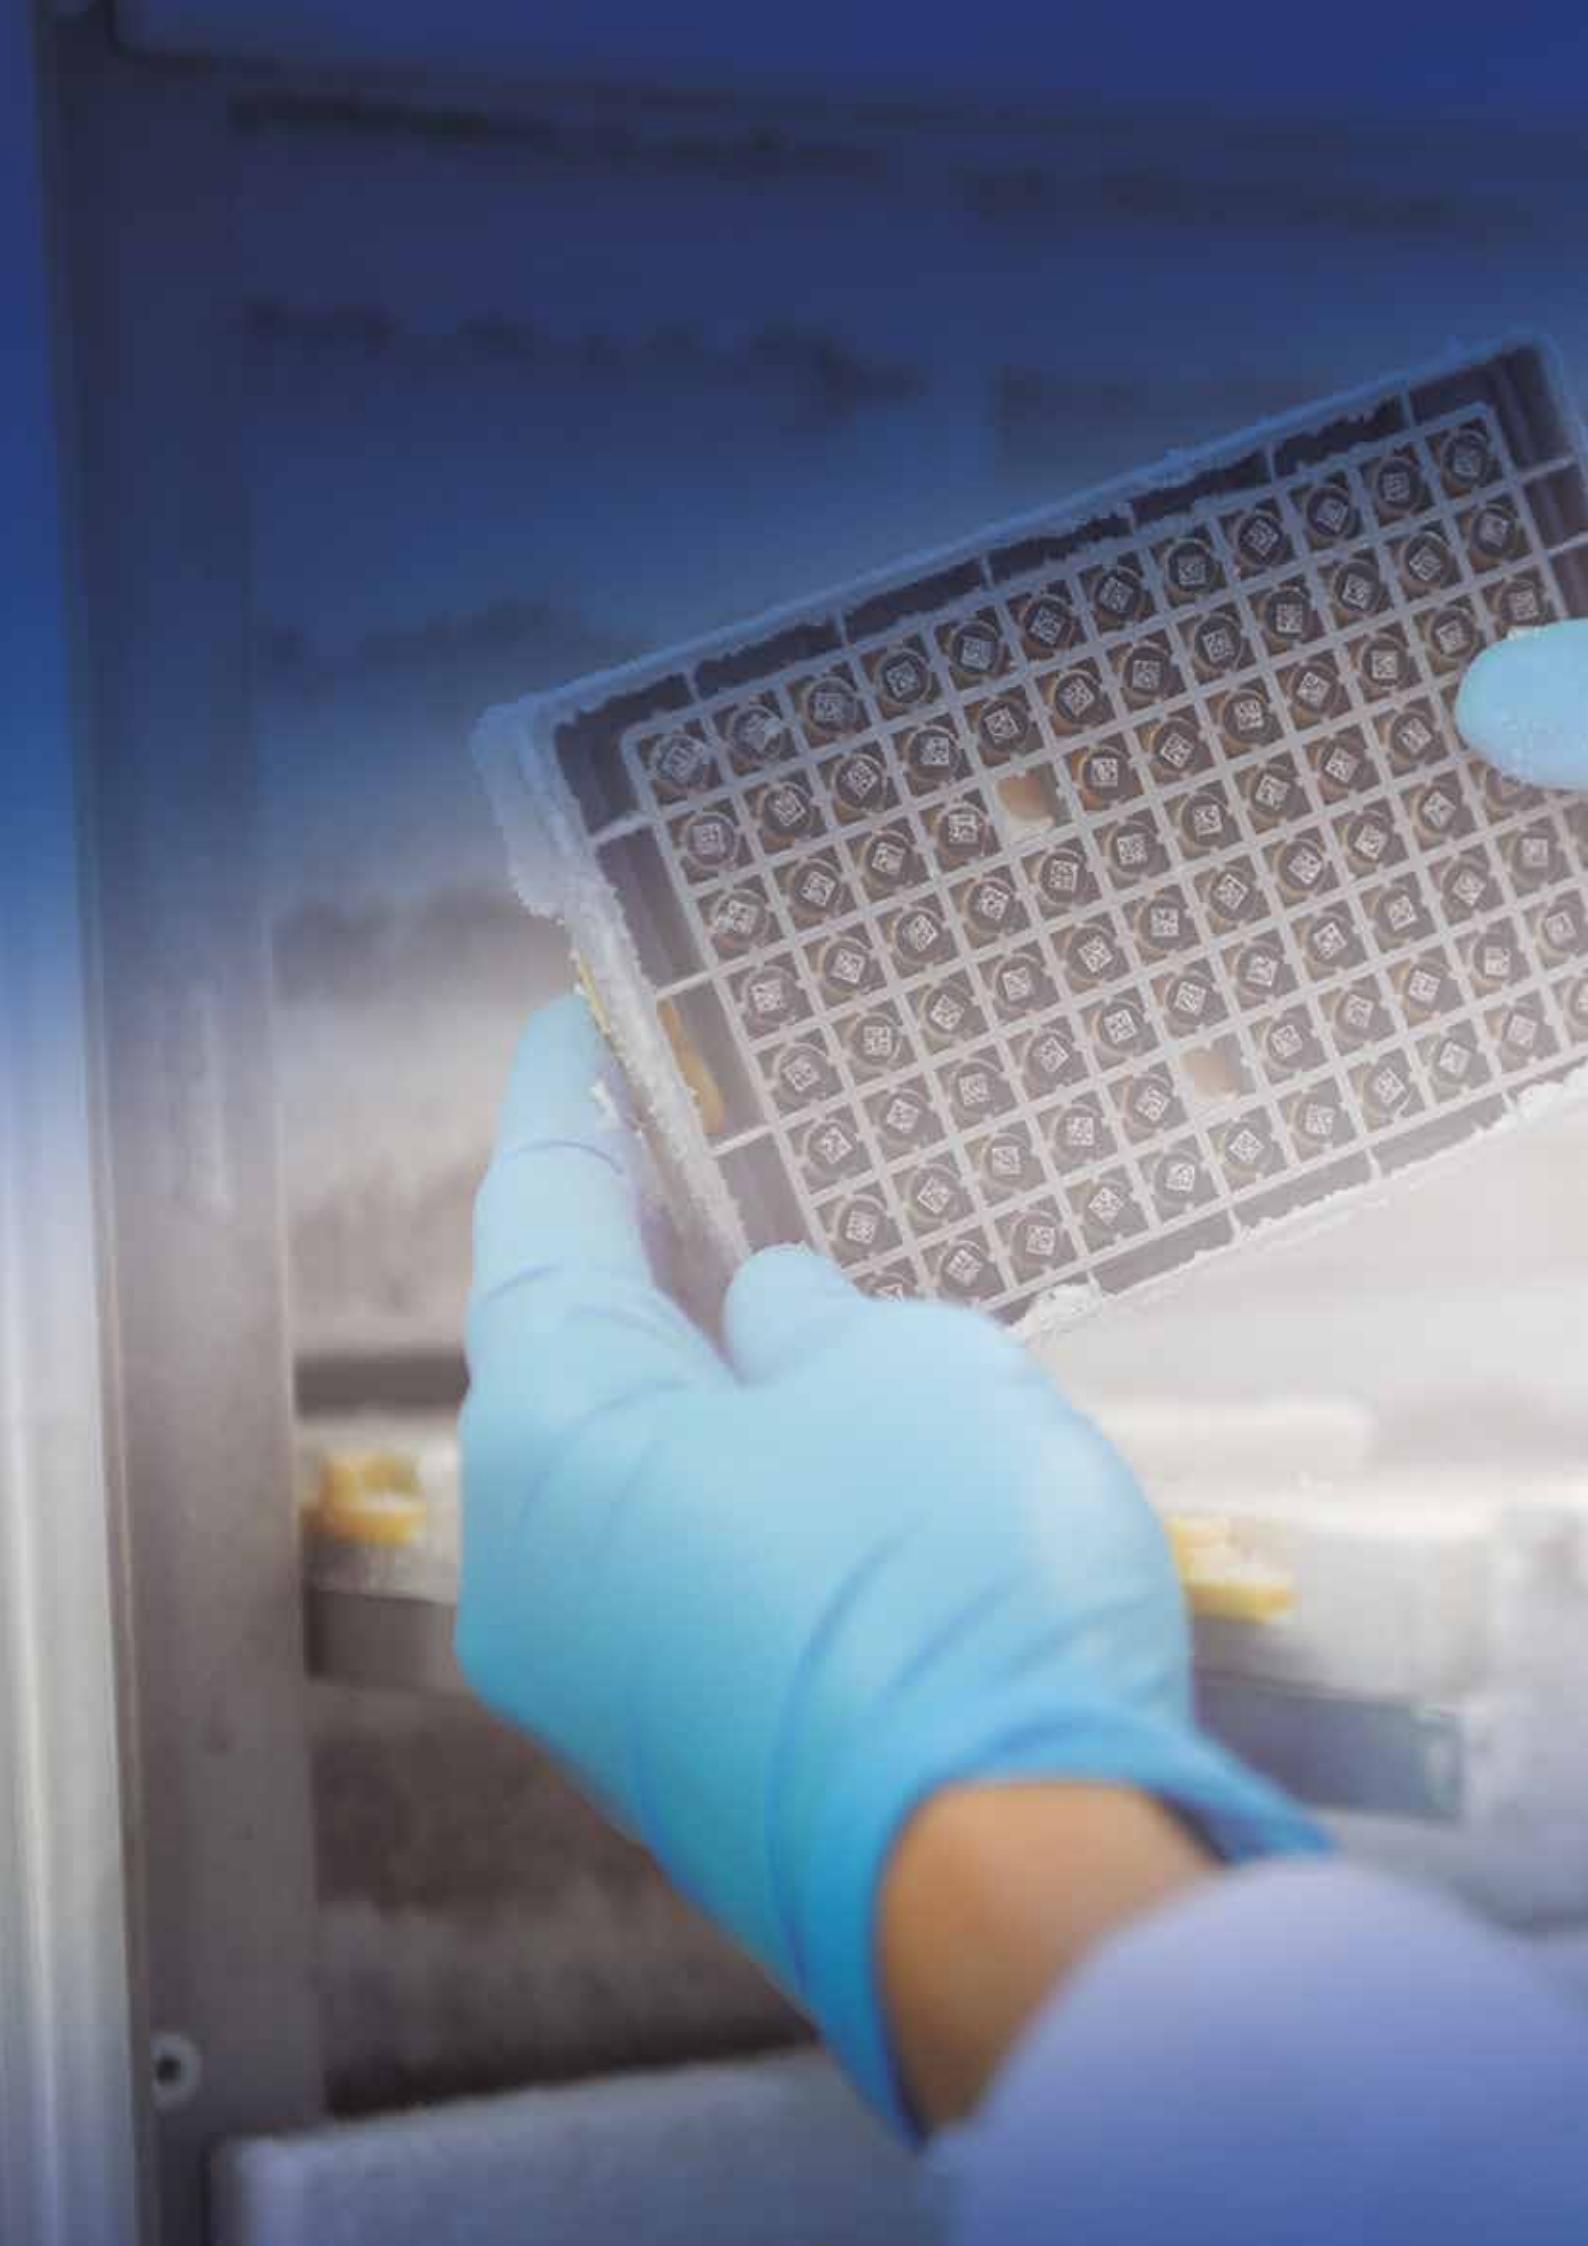

University of Cantabria and IDIVAL and IBBTEC research institutes, took the initiative to research HC. Thanks to obtaining public financing resources from the Carlos III Health Institute and private contributions (Fight for Life Foundation), the team has published its first contribution to liver cancer, proposing a route that includes liver cancer biopsies and their characterisation using genomic techniques for a detailed analysis of the characteristics of the tumour, a technique known as ultrasequencing. This detects genetic mutations in the tumour

lesions of each patient with liver cancer.

#### **IDIVAL receives the European HRS4R human resources certificate**

IDIVAL has recently received the excellence in human resources seal known as HRS4R. The seal a recognition by the pan-European Euraxess Initiative that IDIVAL complies with European standards in human resource management in research. To achieve this, the team comprising researchers and management personnel, has analysed the institute's situation in this field, identifying aspects

that require improvement and an action plan for implementing it according to the 40 principles of the European research human resources code. The certification process began in October 2016 by adhering to the code of conduct. During this process, the certifying agency, euraxess (<https://euraxess.ec.europa.eu/jobs/hrs4r>), verified compliance with its requirements via an action plan prepared by IDIVAL, which is already in use in around 60 actions that ultimately aim to promote and attract talent in research and that are available on the IDIVAL website.

**IDIVAL R&D&i  
Activity**

## IDIVAL financing in 2018

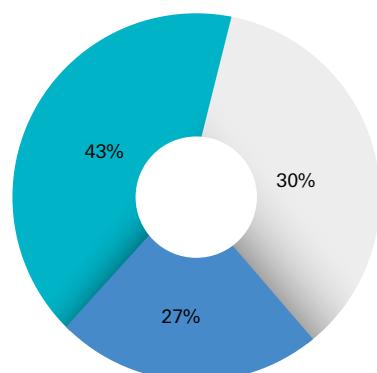

### Revenue

IDIVAL recorded total revenue of €7.6 million in 2018. Revenue from the Government of Cantabria was €2.29 million, representing 30% of total revenue. The

remaining revenue (70%) came from public and private competitive programmes at national and international level (€2.07 million) and the private agreements and

contracts signed during the year (€3.26 million).

IDIVAL REVENUE	Amount
Government of Cantabria	2,229,000.00
Competitive calls	2,069,683.40
Regional programmes	40,000.00
R&D National Plan	1,669,659.86
European Commission Programmes	104,907.34
Private competitive grants	255,116.20
Private contracts and agreements	3,263,272.47
Clinical testing	2,030,111.14
Service contracts	413,769.40
Collaboration agreements	57,563.19
Donations	761,828.74
Provision of services	25,963.51
<b>TOTAL REVENUE</b>	<b>7,587,919.38</b>

ORIGIN OF REVENUE, 2018  
Percentage Distribution

- Government of Cantabria
- Competitive calls
- Private contracts and agreements

## Expenditure

IDIVAL's expenditure is essentially allocated to developing self-funded research projects, to the IDIVAL research grant programme and to structural costs (support personnel, in-house research personnel and operational costs)

In 2018, total expenditure for developing projects with specific financing was €3.1 million, €3.1 million in structural costs and €0.3 million in investments. The IDIVAL grant programme involved expenditure of €1.06 million

(Valdecilla López Albo Post-MIR contracts, productivity, research projects for new researchers, innovation projects, nursing projects, primary care, cofinancing projects and contracts, etc.).

## Personnel

In 2018, IDIVAL had 32 Research Groups, consisting of researchers, collaborators and technical personnel, all belonging to the Marqués de Valdecilla University Hospital and the University of Cantabria. One of these research groups joined in 2018 after the assessment of the External Scientific Council. Of the 32 research groups, 19 are consolidated, 6 emerging, 6 associated clinical, and 1 newly created.

Of the 32 Research Groups, 21 are directed by head researchers involved with clinical activity, 9 by researchers of the University of Cantabria, 2 by Institute researchers, and 1 by Ministry of Health personnel.

In 2018, these groups had a total of 610 members, of which 46 were Primary Investigators on projects developed through competitive funding in active national or international calls over the last five years (2014-2018).

Personnel contracted by IDIVAL during 2018 belong to the following programmes:

	<b>Number</b>
<b>Researcher Programmes</b>	
Miguel Servet Programme (ISCIII):	3
IDIVAL Researchers:	6
<b>Research Training Programme</b>	
Rio Hortega Programme (ISCIII):	2
Sara Borell Programme (ISCIII):	1
Wenceslao López Albo Programme (IDIVAL):	6
<b>Contracts for Research Projects</b>	
IDIVAL-funded contracts	29
Public-funded contracts:	26
Privately-funded contracts:	34
<b>Support Services</b>	
Scren Programme (ISCIII):	2
Biobank network (ISCIII):	1
ITEMAS Platform (ISCIII):	4
Infrastructure technicians (MICINN):	1
IDIVAL support personnel:	22
Four individuals contracted through CIBER must be added to this list.	

## Publications

In terms of production activity, IDIVAL researchers have published 458 indexed papers in 2018 (excluding conference papers published in journals). In 197 papers (43%), the first or last

author pertains to IDIVAL, and two or more IDIVAL groups participated in 177 (39%). 292 publications (64%) were in collaboration with authors from other countries.

The list of countries and the number of authors from each country is shown in the attached table.

Country	No. authors	Country	No. authors
Germany	315	Ireland	47
Argentina	17	Iceland	3
Australia	188	Israel	17
Austria	35	Italy	259

Granada	2	Thailand	1
Greece	29	Taiwan	3
Hong Kong	6	Tunisia	24
Hungary	6	Turkey	7
India	5	Uruguay	2

## Impact factor

In 2018, the cumulative impact factor of IDIVAL group publications was 2,296 (JCR 2017), with a percentage of

publications with an impact factor in the first quartile of 52%, and 100 (21.8%) of the papers published in 2018 had an impact

factor in the first decile of the specialisation.

## Citations

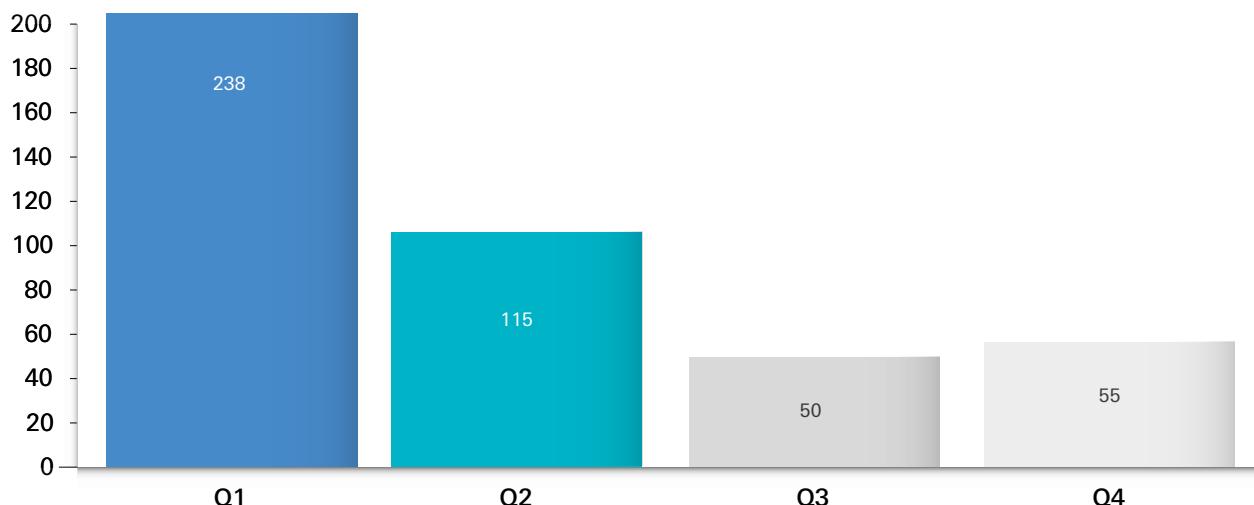

The first article by Valdecilla researchers was cited in 1930 and 1941. This was the paper published by Dr González Aguilar: González-Aguilar J. Contribution to the pathogeny of tendon tumours of giant cells. *Journal of Bone and Joint Surgery*, 1930; 12: 280-288.

Throughout 2018, the Valdecilla mark obtained 15,798 featured quotations according to data from the ISI web of knowledge platform (using the descriptor "valdecilla" in the corresponding affiliation field). Thus, by 2018 the Valdecilla brand had reached 140,000 accumulated

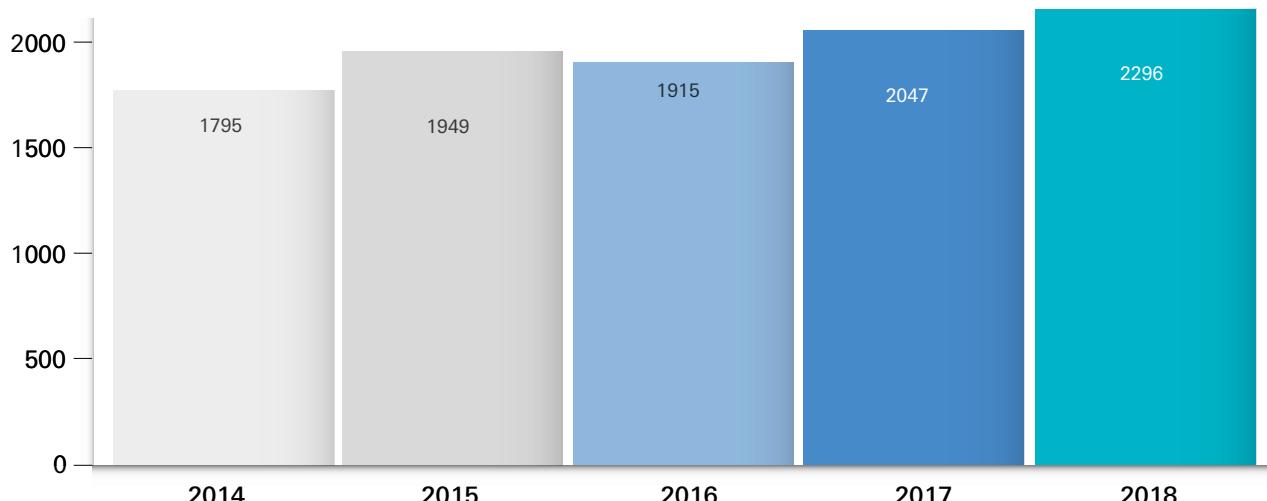

citations, and more than 210 works exceeded 100 citations.

In 2018, the IDIVAL brand had an impact in 101 written press new articles, 56 regional, 43 national and 2 international.

### IDIVAL publications in 2018, distributed by quartile

**17.** Räber L, Mintz GS, Koskinas KC, Johnson TW, Holm NR, Onuma Y, Radu MD, Joner M, Yu B, Jia H, Menevau N, de la Torre Hernandez JM, Escaned J, Hill J, Prati F, Colombo A, di Mario C, Regar E, Capodanno D, Wijns W, Byrne RA, Guagliumi G, **ESC Scientific Document Group. Clinical use of intracoronary imaging. Part 1: guidance and optimization of coronary interventions. An expert consensus document of the European Association of Percutaneous Cardiovascular Interventions.** Eur Heart J 2018. 39(35): 3281 - 3300. IF: 23.425 (Q1).

**18.** Tramullas M, Francés R, de la Fuente R, Velategui S, Carcelén M, García R, Llorca J, Hurlé MA. **MicroRNA-30c-5p modulates neuropathic pain in rodents.** SCI TRANSL MED 2018. 10(453). IF: 16.710 (Q1).

**19.** Villahoz S, Yunes-Leites PS, Méndez-Barbero N, Urso K, Bonzon-Kulichenko E, Ortega S, Nistal JF, Vazquez J, Offermanns S, Redondo JM, Campanero MR. **Conditional deletion of Rcan1 predisposes to hypertension-mediated intramural hematoma and subsequent aneurysm and aortic rupture.** Nat. Commun. 2018. 9(1): 4795 - 4795. IF: 12.353 (Q1).

**20.** Abad A, Martínez-Balibrea E, Viéitez JM, Orduña VA, García Alfonso P, Manzano JL, Massuti B, Benavides M, Carrato A, Zanui M, Gallego J, Grávalos C, Conde V, Provencio M, Valladares M, Salazar R, Sastre J, Montagut C, Rivera F, Aranda E. **Genotype-based selection of treatment of patients with advanced colorectal cancer (SETICC): a pharmacogenetic-based randomized phase II trial.** Ann Oncol 2018. 29(2): 439 - 444. IF: 13.926 (Q1).

## Research Projects

### Grants active or awarded in 2018

#### Active Grants

Throughout 2018, IDIVAL groups maintained the following active projects in the R&D&i National Plan, research contracts and European projects.

#### Projects

##### 1. PI 15/00009. **OCAMPO SOSA, ALAIN ANTONIO.**

Functional identification and characterisation of new components of type VI secretion systems and the molecular basis of their regulation in clinical strains of *Pseudomonas aeruginosa*. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 2. PI 15/00521. **OLMOS MARTÍNEZ, JOSÉ MANUEL.**

Study of bone and mineral metabolism of the post-menopausal female and male population aged 50 and over receiving care from a health centre in Cantabria. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 3. PI 15/00525. **GONZALEZ-GAY MANTECON, MIGUEL ANGEL** Genetic markers of atherosclerotic disease in Rheumatoid Arthritis. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 4. PI 15/01224. **NISTAL HERRERA, JUAN FRANCISCO.** Bone morphogenetic protein 7 (BMP7): Potential therapeutic target in the pathological remodelling of the cardiovascular system. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 5. PI 15/02138. **CRESPO GARCIA, JAVIER.** Endothelial dysfunction, subclinical atheromatous disease and cardiomyopathy in patients with HCV infection. Characterisation and potential reversibility with direct antiviral agents. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 6. PI 15/01285. **OTERINO DURAN, AGUSTIN** Epigenetic modifications induced by adverse childhood experiences and endothelial damage in chronic migraines: case-control study. Murine experimental model creation. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 7. PI 15/00069. **LLORCA DÍAZ, JAVIER.** Integration of genetic big data and clinical data: survival with breast cancer in the MCC-Spain study. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 8. PI E15/00079. **CRESPO GARCIA, JAVIER.** Personalized Medicine in HCV infection: understanding and predicting hepatic and systemic responses in the era of the new antiviral drugs. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 9. RTC-2015-3786-1. **GOMEZ ROMÁN, JAVIER.** Development of anti-CCR9 therapeutic antibodies for the personalised treatment of tumours- TERPERAN. CARLOS III HEALTH INSTITUTE. 2016-2018.

##### 10. PI16/00156 **VAQUE DIEZ, JOSE PEDRO.** New mechanisms in aggressive skin cancers: Applications to the diagnosis, prognosis and treatment of therapy-resistant melanoma and Merkel-cell carcinoma. CARLOS III HEALTH INSTITUTE. 2017-2019.

##### 11. PI16/00915 **RIANCHO MORAL, JOSE ANTONIO.** Study of mesenchymal stem cells in osteoporosis: Role of long non-coding RNAs (lncRNAs) and regenerative potential. CARLOS III HEALTH INSTITUTE. 2017-2019.

##### 12. PI16/01103 **RAMOS VIVAS, JOSE.** Integrated biology of infection and antimicrobial resistance of *Acinetobacter baumannii* and *A. pittii*. CARLOS III HEALTH INSTITUTE. 2017-2019.

##### 13. PI16/01294 **PIRIS PINILLA, MIGUEL ANGEL.** Aggressive lymphomas:

Interaction between the tumour genome and the microenvironment as a determinant of progression and response to therapy. CARLOS III HEALTH INSTITUTE. 2017-2019.

**14. PI16/01397**  
**MONTES MORENO, SANTIAGO.**  
Targeted exonic next generation sequencing for the molecular diagnosis and cell free tumour DNA analysis as a screening method for patients with DLBCL. CARLOS III HEALTH INSTITUTE. 2017-2019.

**15. PI16/01415**  
**FARIÑAS ALVAREZ, MARIA DEL CARMEN.**  
Impact of intestinal colonisation by multiresistant enterobacteriaceae in systemic infections, graft-versus-host disease (GVHD), and mortality in patients receiving transplants of allogeneic hematopoietic progenitor cells (Alo-HCT). CARLOS III HEALTH INSTITUTE. 2017-2019.

**16. PI16/01535**  
**FRANCIA GIL, MARIA VICTORIA.**  
Induction of conjugative pheromone-induced plasmid transfer. CARLOS III HEALTH INSTITUTE. 2017-2019.

**17. PI16/01585**  
**LOPEZ HOYOS, MARCOS.**  
Utility of the study of Myeloid-Derived Suppressor Cells (MDSC) when monitoring kidney transplants. CARLOS III HEALTH INSTITUTE. 2017-2019.

**18. PI16/01652**  
**SANCHEZ JUAN, PASCUAL.** Study of rare variant genes associated with Alzheimer's disease in the Spanish population. CARLOS III HEALTH INSTITUTE. 2017-2019.

**19. PI16/01656**  
**JIMENEZ BONILLA, JULIO FRANCISCO.**  
5-Year study of a population with Mild Cognitive Impairment (MCI) previously evaluated with 11C-PIB and 18F-FDG PET/TAC. CARLOS

III HEALTH INSTITUTE. 2017-2019.

**20. PI16/01717**  
**MARTINEZ TABOADA, VICTOR MANUEL.**  
Study of the role of Bambi, a regulator of TGF beta signalling, as a pathogenic factor and prognostic marker in rheumatoid arthritis. CARLOS III HEALTH INSTITUTE. 2017-2019.  
**21. CP16/00033**  
**LOPEZ MEJIAS, RAQUEL.**  
Cardiovascular risk assessment in patients with rheumatoid arthritis: the relevance of genetic markers. CARLOS III HEALTH INSTITUTE 2017-2019.

**22. PI16-00496**  
**LÓPEZ FANARRAGA, MÓNICA**  
Design and evaluation of multi-therapeutic nano-dispensers based on carbon nanotubes to treat tumours. CARLOS III HEALTH INSTITUTE. 2017-2019.

**23. SAF2016-76046-R**  
**CRESPO FACORRO, BENEDICTO.**  
Stratified treatment in schizophrenia: integrating results of the human and cellular transcriptome in antipsychotic treatment strategies. MINECO. 2017-2019.

**24.SAF2016-75195-R**  
**MERINO PÉREZ, JESÚS.**  
Bambi, a regulator of TGF beta signalling, in cutaneous inflammation and differentiation of Human CD4 T Lymphocytes. MINECO. 2017-2019.

**25. PI17/00156.**  
**FERNÁNDEZ TORRE, JOSE LUIS.** Intracortical electroencephalography in coma patients with acute brain damage. CARLOS III HEALTH INSTITUTE. 2018-2020.

**26. PI17/00936.**  
**INFANTE CEBERIO, JON.**  
Study of motor, genetic and imaging biomarkers in prodromal Parkinson's disease associated with the G2019S mutation in LRRK2.

CARLOS III HEALTH INSTITUTE. 2018-2020.

**27. PI17/01307**  
**GANDARILLAS SOLINÍS, ALBERTO.**  
Therapeutic targets: common causes of genomic instability and malignancy in squamous cancer, for application in personalised medicine. CARLOS III HEALTH INSTITUTE. 2018-2020.

**28. PI17/01399.**  
**FERNÁNDEZ LUNA, JOSE LUIS.**  
Contribution of the hypoxia-odz1 axis to the invasive capacity of glioblastoma. CARLOS III HEALTH INSTITUTE. 2018-2020.

**29. PI17/01688.**  
**PIPAON GONZÁLEZ, CARLOS.**  
The role of neddylation in chronic lymphocytic leukaemia, its value for prognosis and therapeutic applications. CARLOS III HEALTH INSTITUTE. 2018-2020.

**30. DTS17/00055**  
**CONDE PORTILLA, OLGA MARIA.**  
Design and development of a multimodal device for intraoperative cardiovascular diagnosis (IntraCardio). CARLOS III HEALTH INSTITUTE. 2018-2019.

#### Research and Mobility Contracts

**CPII17/00011**  
**OCAMPO SOSA, ALAIN ANTONIO.**  
Miguel Servet Type II contract. CARLOS III HEALTH INSTITUTE 2018-2020.

**CD17/00105**  
**GONZÁLEZ LAGARRETA, LORENA.**  
Sara Borrell contract. CARLOS III HEALTH INSTITUTE 2018-2020.

**PTA2015-11501-I.**  
**PEREDA MARCOS, SARAY**  
Research Technical Support Contract MINECO 2017-2019.

MS16/00033

**RAQUEL LÓPEZ MEJIAS.**Miguel Servet Type I contract.  
CARLOS III HEALTH INSTITUTE  
2017-2021.**Active European Projects in 2018**

EU12/01- PSYSCAN.

**CRESPO FACORRO, BENEDICTO.**Translating neuroimaging findings  
from research into clinical practice.  
7PM. European Commission.

EU13/01- PRECISESADS.

**GONZÁLEZ-GAY, MIGUEL ÁNGEL.**Molecular Reclassification to Find  
Clinically Useful Biomarkers for  
Systemic Autoimmune Diseases.  
FP7, Innovative Medicines  
Initiative. European Commission.

EU16/1. CHRODIS PLUS.

**FERNANDEZ VIADERO, CARLOS.**Action on chronic diseases.  
European Commission.

ECT-2017-0371. VALER H2020.

**CRESPO FACORRO, BENEDICTO.**Valdecilla initiative to promote  
European research. European  
Commission.

SOE2/P1/E0674. TiChroN.

**LAPUENTE HEPPE, IGNACIO.**Use of ICTs as a tool to improve  
comprehensive care of children  
with chronic diseases. Interreg,  
Sudoe.

EU17/15

**CRESPO FACORRO, BENEDICTO.**COST Action CA15211  
Atmospheric Electricity Network:  
coupling with the Earth System,  
climate and biological systems

EU17/24.

**LOPEZ FANARRAGA, MÓNICA.**COST Action BM1401 European  
Network on RAMAN-BASED  
Applications for clinical diagnosis  
(Raman4clinics)

EU17/26.

**INFANTE CEBIRO, JON.** ICTUSnet  
- Network of excellence for the  
development and implementation  
of innovative models in the  
integrated care of ictus.

EU17/27.

**CAYÓN DE LAS CUEVAS,****JOAQUIN.** HLPN Health Law  
and Policy Network. Erasmus+  
Programme - Jean Monnet  
Activities.

EU18/08. PSYCH UP.

**CRESPO FACORRO, BENEDICTO.**Improving support for people  
affected by psychological  
disorders during their training  
path.

EU18/12

**RIANCHO MORAL, JOSE ANTONIO.**COST Action: GEMSTONE  
“GEnomics cooSkeletal traits  
TranslatiOnal Network”.**NISTAL HERRERA, JUAN****FRANCISCO.**MicroRNAs: biomarkers with  
prognostic value and potential  
therapy targets for regression  
of cardiac hypertrophy. CARLOS  
III HEALTH INSTITUTE 2019-  
2021.

PI18/00762.

**OLMOS MARTÍNEZ, JOSÉ  
MANUEL.**Study of bone and mineral  
metabolism of the post-  
menopausal female and male  
population aged 50 and over  
receiving care from a health  
centre in Cantabria. Camargo  
cohort. CARLOS III HEALTH  
INSTITUTE 2019-2021.

PI18/00827

**DIERSEN SOTOS,  
TRINIDAD.**Lifestyles and breast cancer  
- LifeBreast Test. CARLOS III  
HEALTH INSTITUTE 2019-  
2021.

PI18/01304

**CRESPO GARCÍA, JAVIER.**Non-alcoholic steatohepatitis  
as an immunomediated  
inflammatory disease. Prevalence  
and characterisation. INSTInCT  
Study. CARLOS III HEALTH  
INSTITUTE 2019-2021.

CP18/00003

**AYESA ARRIOLA, ROSA.**The study of intelligence and  
general neurocognitive  
function, that strongly overlap  
genetically, may be a promising  
approach for genetic research  
in schizophrenia spectrum  
disorders (from now SSD).  
CARLOS III HEALTH I  
NSTITUTE 2019-2022.

DTS18/00022.

**ÁLVAREZ DOMÍNGUEZ,  
CARMEN.**Validation of nanovaccines  
based on Listeria as combination  
immunotherapy in solid  
tumours. CARLOS III  
HEALTH INSTITUTE  
2019-2020.**Grants awarded**In 2018, IDIVAL researchers  
received a positive response  
on the following projects in the  
National Plan

PI18/00042.

**LÓPEZ MEJIAS, RAQUEL.**Characterisation of molecular  
bases of IgA-mediated vasculitis.  
CARLOS III HEALTH INSTITUTE  
2019-2021.

PI18/00043.

**GONZÁLEZ-GAY MANTECÓN,  
MIGUEL ÁNGEL.**Genetic markers associated  
with metabolic syndrome  
and cardiovascular disease in  
rheumatoid arthritis. CARLOS III  
HEALTH INSTITUTE 2019-2021.

PI18/00380.

**OCAMPO SOSA, ALAIN ANTONIO.**Type VI secretion system and  
ExIA exolysin as virulence  
markers in *Pseudomonas*  
*aeruginosa* in pneumonia  
association with mechanical  
ventilation. CARLOS III HEALTH  
INSTITUTE 2019-2021.

PI18/00543.

DTS18/00141.  
**FERNÁNDEZ LUNA, JOSÉ LUIS.**  
 Nanoplasmonic sensor for the detection of tumour cells circulating in the blood.  
 CARLOS III HEALTH INSTITUTE  
 2019-2020.

MS18/00003.  
**AYESA ARRIOLA, ROSA.**  
 Miguel Servet type I contract.  
 2019-2023

IFI18-00027.  
**SANTAMARÍA AGUIRRE, JAVIER.**  
 IIS-business Doctorates in Health Sciences and Technologies. 2019-2022

## Clinical trials

During 2018, IDIVAL authorised a total of 77 clinical trial contracts and 48 post-authorisation studies to be performed in the Marqués de

Valdecilla University Hospital and its area of influence. The list of major clinical trials approved in 2018 is shown in the attached table.

### List of trials with contracts signed in 2018

Researcher	Clinical trial
<b>CRESPO GARCÍA, JAVIER</b>	AURORA: Phase 3, multicentre, randomised, double-blind, placebo-controlled study to assess the effectiveness and safety of cenicriviroc for treating hepatic fibrosis in adult patients with non-alcoholic steatohepatitis.
<b>RIVERA HERRERO, FERNANDO</b>	Phase 3, Multicenter, Randomized, Double-Blind, Placebo-controlled Study of AG-120 in Previously-treated Subjects with Nonresectable or Metastatic Cholangiocarcinoma with an IDH1 Mutation.
<b>OTERINO DURÁN, AGUSTÍN</b>	Multicentre, randomised, double-blind, parallel group, placebo-controlled, open period study to assess the effectiveness and safety of fremanezumab in prophylactic treatment of migraines in patients with an inadequate response to previous preventive treatments
<b>RUÍZ SAN MILLÁN, JUAN CARLOS</b>	Single-group ALXN1210 study in adult and teenage patients with atypical haemolytic-uremic syndrome (SHUA) with no prior treatment with complement inhibitors
<b>GARCÍA RIVERO, JUAN LUIS</b>	Multicentre, randomised, double-blind, placebo-controlled 12 week study to assess the effectiveness and safety of QAW039 added to standard base treatment of asthma in patients with uncontrolled asthma
<b>BLANCO ALONSO, RICARDO</b>	Multicentre, randomised, partial-blind, active control study to demonstrate reduction in radiographic progression with secukinumab compared to GP2017 (biosimilar to adalimumab) in week 104, and to assess safety, tolerability and long-term effectiveness in a 2-year period in patients with active ankylosing spondylitis
<b>SÁNCHEZ JUAN, PASCUAL JESÚS</b>	Multicentre, double-blind, randomised and parallel group-controlled study to research the effectiveness and safety of BI 425809, administered orally during a 12-week treatment period, compared to placebo in patients with cognitive deterioration due to Alzheimer's disease
<b>YÁÑEZ SAN SEGUNDO, LUCRECIA</b>	Phase 2, open, prospective and randomised study on the effectiveness of adding defibrotide to regular treatment of immunoprophylaxis for the prevention of acute graft-versus-host disease in adult and paediatric patients following allogeneic haematopoietic stem cell transplantation
<b>CRESPO GARCÍA, JAVIER</b>	Phase 2a, randomised, partially-blind and placebo-controlled study to assess the effectiveness, safety and pharmacokinetics of 24-week treatment with multiple doses of JNJ-56136379 in monotherapy and in combination with nucleotide analogue in patients with chronic hepatitis B virus infection
<b>RIVERA HERRERO, FERNANDO</b>	PANOVA-3: Fundamental, randomised and open study of simultaneous treatment with TTFIELDS (electrical fields for treating tumours, 150 kHz) and gemcitabine and nab-paclitaxel (paclitaxel bound to albumin in nanoparticle formation) as a first-line treatment of pancreatic adenocarcinoma in locally advanced stage.

Researcher	Clinical trial
LÓPEZ-BREA PIQUERAS, MARTA FRANCISCA	Phase 2/3, randomised, open and two-part study of dinutuximab and irinotecan versus irinotecan as second-line treatment in subjects with recurring or resistant small cell lung cancer
RIVERO TIRADO, MONTSERRAT	Suspension of TNF inhibitor treatment in patients with inflammatory bowel disease: multicentre, prospective and randomised clinical trial
FERNANDEZ FORCELLEDO, J. LUIS	Suspension of TNF inhibitor treatment in patients with inflammatory bowel disease: multicentre, prospective and randomised clinical trial
BLANCO ALONSO, RICARDO	Multicentre, randomised, double-blind and placebo-controlled study to assess the safety and effectiveness of upadacitinib in patients with active ankylosing spondylitis
CRESPO FACORRO, BENEDICTO	Phase 3 study to assess the safety, tolerability and long-term durability of the effect of treatment with ALKs3831 in subjects with schizophrenia or type 1 bipolar disorder
GARCÍA RIVERO, JUAN LUIS	Phase 3b, multicentre, randomised, double-blind, parallel group and placebo-controlled study to assess the safety and effectiveness of Benralizumab 30 mg SC in patients with severe asthma not controlled with common clinical practice
GARCÍA RIVERO, JUAN LUIS	Multicentre, randomised, placebo-controlled, parallel group study in two treatment periods to assess the safety of QAW039 added to existing treatment in patients with asthma not controlled with GINA steps 3, 4 and 5
DE LA TORRE HERNÁNDEZ, MARÍA	Edoxaban versus standard treatment and its effects on clinical results in patients <b>JOSÉ</b> subjected to transcatheter aortic valve implantation (in auricular fibrillation).
RODRÍGUEZ FDEZ, FERNANDO	Phase 3 trial to assess the effectiveness and safety on sublingual components in immunotherapy against domestic dust mites in children and teenagers (5 to 17 years) with allergic asthma induced by domestic dust mites
VÁZQUEZ SALVI, LUÍS	Randomised, double-blind and parallel group study to assess the effectiveness and safety of dulaglutide doses in research when added to metformin treatment in patients with type 2 diabetes mellitus
ZUECO GIL, JOSE JAVIER	Register with healthcare product: Optical coherence tomography study 9 months after pharmacocoactive biostable albuminal polymer and sirolimus.
CRESPO GARCÍA, JAVIER	Randomised, double-blind, placebo-controlled, exploratory, phase 2a study to assess the safety and effectiveness of DS102 administered orally in patients with NAFLD
PIÑERA HACES, VICENTE C.	Phase 3, randomised, double-blind, active control, parallel group and multicentre study in haemodialysis participants with anaemia caused by chronic liver disease to assess the effectiveness, safety and pharmacokinetics of daprodustat administered three times a week, versus recombinant human erythropoietin, after having received recombinant human erythropoietin or similar
RIVERO TIRADO, MONTSERRAT	Phase 2a, randomised, double-blind, placebo-controlled, parallel group study to assess the effectiveness and safety of oral pf-06651600 and pf-06700841 as an induction and open extension treatment in patients with moderate or severe Crohn's disease
RIVERO TIRADO, MONTSERRAT	Phase 3b, multicentre, randomised, blind, active drug-controlled study to compare the effectiveness and safety of ustekinumab versus adalimumab in the treatment of patients with moderate or severe activity Crohn's disease not previously treated with biological drugs
NÚÑEZ CÉSPEDES, JAVIER	Phase 1b/2 Trial of Combined SGN-35 (BrentuximabVedotin) Therapy with cyclophosphamide, procarbazine, prednisone, etoposide and mitoxantrone (BrEPEM) for Older Patients with Untreated Hodgkin Lymphoma (HL)
SAINZ LASO, FERMÍN	Master DAPT
RIVERA HERRERO, FERNANDO	Open phase 1b/2 study of binimetinib administered in combination with nivolumab or nivolumab plus ipilimumab in patients with metastatic colorectal cancer with stable microsatellite (MSE) previously treated with RAS mutation
CRESPO GARCÍA, JAVIER	Multicentre, randomised, controlled and double-blind study of the effectiveness and safety of gastric endoscopic tubulation in patients with non-alcoholic steatohepatitis
GARCÍA RIVERO, JUAN LUIS	Multicentre, randomised, double-blind trial in parallel groups to assess the effectiveness and safety of PT010 compared to PT003 and PT009 in exacerbation of COPD during a 52-week treatment period, in subjects with COPD ranging from moderate to very severe.
GUTÍERREZ BAÑOS, JOSÉ LUÍS	Phase 3, randomised, double-blind, active drug (tolterodine) and placebo-controlled, international and multicentre study to assess the safety and effectiveness of vibegron in patients with symptoms of hyperactive bladder

## Researcher

## Clinical trial

<b>DE JUAN FERRÉ, ANA</b>	Phase 2 Olaparib maintenance trial following response to trabectedin and pegylated liposomal doxorubicin in recurring ovarian cancer
<b>RODRÍGUEZ RODRÍGUEZ, ELOY M.</b>	Multicentre, randomised, double-blind, placebo-controlled, parallel-group phase III study to assess the effectiveness and safety of gantenerumab in patients with early (prodromal to mild) Alzheimer's disease and sub-studies: "Longitudinal PET sub-study for amyloid associated with: phase 3, multicentre, randomised, double-blind, placebo-controlled and parallel group study to assess the effectiveness and safety of gantenerumab in patients with early (prodromal to mild) Alzheimer's disease and "exploratory PET sub-study for tau associated with: phase 3, multicentre, randomised, double-blind, placebo-controlled and parallel group study to assess the effectiveness and safety of gantenerumab in patients with early (prodromal to mild) Alzheimer's disease
<b>CRESPO GARCÍA, JAVIER</b>	Phase 2, randomised, double-blind, placebo-controlled and dose interval study to assess the safety, tolerability, pharmacokinetics and effectiveness of EDP-305 in patients with primary biliary cholangitis (PBC) with or without insufficient response to ursodeoxycholic acid (UDCA)
<b>DURAN MARTINEZ, IGNACIO</b>	Phase 3, randomised, double-blind, multicentre study of nivolumab as adjuvant treatment versus placebo in subjects with high risk invasive urothelial carcinoma
<b>DURAN MARTINEZ, IGNACIO</b>	The DUTRENEO Trial: A Prospective Study to Individualize the Approach with DUrvatumab (MEDI4736) and TREmelimumab in NEOadjuvant Bladder Cancer patients
<b>DURAN MARTINEZ, IGNACIO</b>	Phase 3, randomised, open and multicentre clinical trial to compare the effectiveness and safety of lenvatinib in combination with everolimus or pembrolizumab versus sunitinib monotherapy in first line treatment of subjects with advanced renal cell carcinoma (CLEAR)
<b>LÓPEZ LÓPEZ, CARLOS</b>	Phase 3, randomised, open, multicentre trial of durvalumab and tremelimumab as first line treatment in patients with Unresectable Hepatocellular Carcinoma (HIMALAYA)
<b>DURAN MARTINEZ, IGNACIO</b>	Phase 3, randomised, open study of nivolumab combined with cabozantinib or nivolumab and ipilimumab combined with cabozantinib versus sunitinib in participants with previously untreated advanced or metastatic renal cell carcinoma
<b>RIVERA HERRERO, FERNANDO</b>	Phase 3, randomised, blind, active controlled clinical trial of BMS-986213 (combination with fixed doses of relatlimab [anti-LAG-3] plus nivolumab) in combination with chemotherapy versus placebo plus chemotherapy as first line treatment in patients with locally advanced or metastatic unresectable gastric adenocarcinoma, LAG-3 positive
<b>OTERINO DURÁN, AGUSTÍN</b>	Randomised, double-blind study of galcanezumab versus placebo in adult patients with treatment-resistance migraine - CONQUER Study.
<b>BERMÚDEZ RODRÍGUEZ, MARÍA A.</b>	Phase 1, open trial searching for the dose of CC-93269, a BCMA X CD3 T cell antibody, in subjects with relapsed or resistant multiple myeloma
<b>COLORADO ARAUJO, MARÍA DE LAS MERCEDES</b>	Phase 1/2, Multicentre, Open-label Study of FT-2102 as a Single Agent and in Combination with Azacitidine in Patients with Acute Myeloid Leukaemia or Myelodysplastic Syndrome with an IDH1 R132 Mutation.
<b>CRESPO GARCÍA, JAVIER</b>	Phase 3, multicentre, randomised, double-blind, parallel group, placebo-controlled maintenance study on mirikizumab in patients with active moderate to severe ulcerative colitis
<b>RIVERA HERRERO, FERNANDO</b>	Phase 3, randomised and double-blind trial to compare trastuzumab plus chemotherapy and pembrolizumab with trastuzumab plus chemotherapy and placebo as first line treatment in participants with gastric adenocarcinoma or advanced gastroesophageal junction with HER2 positive (KEYNOTE 811)
<b>LÓPEZ-BREA PIQUERAS, MARTA F.</b>	Phase 1 study searching for the dose to assess the safety, tolerability, pharmacokinetics and preliminary effectiveness of CC-90011 in subjects with non-Hodgkin's lymphoma and relapsed and/or resistant solid tumours
<b>LÓPEZ LÓPEZ, CARLOS</b>	Open phase 1b trial with Lenvatinib plus Pembrolizumab in subjects with hepatocellular carcinoma
<b>OTERINO DURÁN, AGUSTÍN</b>	Single-group, 4-year open study to assess the effectiveness and safety of treatment with ocrelizumab in patients with progressive multiple sclerosis
<b>DE LA TORRE HERNÁNDEZ, JOSÉ M.</b>	Xience 28 Estudio Global
<b>CRESPO GARCÍA, JAVIER</b>	Phase 3, multicentre, randomised, double-blind, parallel group, placebo-controlled induction study on mirikizumab in patients with conventional and biological failure with active moderate to severe ulcerative colitis

## Researcher

## Clinical trial

<b>LÓPEZ LÓPEZ, CARLOS</b>	Phase 3, open and randomised study of atezolizumab in combination with bevacizumab versus sorafenib in patients with untreated locally advanced or metastatic hepatocellular carcinoma
<b>RIVERO TIRADO, MONTSERRAT</b>	Phase 2, randomised, double-blind and placebo-controlled study to assess the safety and effectiveness of BMS-986165 in patients with moderate to severe Crohn's disease
<b>CIFRIÁN MARTÍNEZ, JOSÉ MANUEL</b>	Phase 2, double-blind, placebo-controlled and randomised study to compare the effectiveness and safety of sotatercept (ACE-011) versus placebo when added to standard pulmonary arterial hypertension (PAH) treatment
<b>DURAN MARTINEZ, IGNACIO</b>	Phase 3, multicentre, randomised, double-blind, placebo-controlled study to research ipatasertib in combination with abiraterone plus prednisone/prednisolone, versus placebo in combination with abiraterone plus prednisone/prednisolone, in adult patients with metastatic castration-resistant prostate cancer, asymptomatic or slightly symptomatic, who have not been previously treated
<b>CRESPO GARCÍA, JAVIER</b>	Multicentre, randomised, double-blind study to assess the safety, tolerability and effectiveness of treatment combining tropifexor (LJN452) and cenicriviroc (CVC) in adult patients with non-alcoholic steatohepatitis (NASH) and hepatic fibrosis (TANDEM).
<b>DURAN MARTINEZ, IGNACIO</b>	Multicentre, single-group and open study of enfortumab vedotin (ASG-22CE) in the treatment of patients with locally advanced or metastatic urothelial cancer who have previously immune checkpoint inhibitors (CPI)
<b>RODRÍGUEZ RODRÍGUEZ, ELOY M.</b>	Multicentre long-term open phase 3 study (BN29552/ BN29553) of Crenezumab in patients with Alzheimer's disease
<b>PORTILLO MARTÍN, JOSE ANTONIO</b>	Treatment of high grade non-invasive urothelial bladder carcinoma by standard number and dose of intravesical BCG instillations versus a reduced number of intravesical instillations with a standard BCG dose
<b>RODRÍGUEZ ENTEM, FELIPE</b>	Cryoablation of pulmonary veins vs antiarrhythmic drugs in persistent auricular fibrillation (CRAFT)
<b>GARCÍA RIVERO, JUAN LUIS</b>	Clinical effectiveness of Fluticasone furoate/Umeclidinium bromide/Vilanterol in a single inhaler (TRELEGY® ELLIPTA®) versus triple therapy in various non-ELLIPTA devices in patients with COPD in standard clinical practice.
<b>RIVERA HERRERO, FERNANDO</b>	Phase 3, randomised and double-blind trial of pembrolizumab (MK-3475) plus chemotherapy versus placebo plus chemotherapy as first line treatment in participants with gastric adenocarcinoma or unresectable or metastatic gastroesophageal junction, without prior treatment and with HER2 negative (KEYNOTE-859)
<b>SÁNCHEZ JUAN, PASCUAL JESÚS</b>	Phase 3 multicentre, randomised, double-blind, placebo-controlled, parallel group study to assess the effectiveness, safety and tolerability of AVP-786 (deudextromethorphan hydrobromide [d6-DM]/quinidine sulphate [Q]) in treating anxiety in patients with Alzheimer's type dementia.
<b>LÓPEZ-BREA PIQUERAS, MARTA F.</b>	Phase 3, multicentre, randomised, double-blind, placebo-controlled study assessing the effectiveness and safety of canakinumab versus placebo as adjuvant therapy in adult patients with non-small cell lung cancer (NSCLC), completely resected (R0), in stage II-IIIA and IIIB (T>5 cm N2) according to AJCC/UICC v.8
<b>BLANCO ALONSO, RICARDO</b>	Phase 2, multicentre, randomised, double-blind, placebo-controlled study of to assess the effectiveness and safety of CC-220 in subjects with active systemic lupus erythematosus.
<b>DURAN MARTINEZ, IGNACIO</b>	Phase 2 study on the effectiveness and safety of Niraparib in men with castration-resistant metastatic prostate cancer and anomalies in DNA repair.
<b>DURAN MARTINEZ, IGNACIO</b>	Phase 3, randomised, open, multicentre and international trial to determine the effectiveness and safety of durvalumab combined with gemcitabine + cisplatin as neoadjuvant treatment followed by durvalumab monotherapy as adjuvant treatment in patients with muscle invasive bladder cancer (NIAGARA).
<b>RIVERO TIRADO, MONTSERRAT</b>	Multicentre, randomised, double-blind and placebo-controlled induction study to assess the effectiveness and safety of upadacitinib (ABT-494) in subjects with moderate to severe Crohn's disease who have had an insufficient response or intolerance to biological treatment.
<b>RIVERO TIRADO, MONTSERRAT</b>	Effectiveness of intravenous corticosteroid bolus plus treatment with oral corticosteroids versus oral corticosteroid monotherapy to treat moderate ulcerative colitis: multicentre and randomised clinical trial (CECUM)

<b>SUBERVIOLA CAÑAS, BORJA</b>	Phase 3, randomised and placebo-controlled trial to assess the safety and effectiveness of pembrolizumab (MK-3475) and lenvatinib (E7080/MK-7902) versus pembrolizumab monotherapy as first line intervention in participants with advanced melanoma (LEAP-003).
<b>DURAN MARTINEZ, IGNACIO</b>	TRITON2: Multicentre, open phase 2 study of Rucaparib in patients with metastatic castration-resistant prostate cancer associated with homologous recombination deficiency, with Protocol CO-338-052 code (TRITON2)
<b>DURAN MARTINEZ, IGNACIO</b>	Open, multicentre, phase 1b study of JNJ-63723283, a PD-1 inhibitor, administered with Apalutamide in men with castration-resistant prostate cancer
<b>GARCÍA CASTAÑO, ALMUDENA</b>	Phase 2, randomised, double-blind and placebo-controlled study of cemiplimab versus the combination of cemiplimab plus ISA101b in treating subjects with HPV16-positive platinum-resistant oropharyngeal cancer (OPC)
<b>RIVERO TIRADO, MONTSERRAT</b>	Phase 3b, randomised, double-blind, multicentre study to assess the safety and effectiveness of intravenous reinduction therapy with Ustekinumab in patients with active moderate to severe Crohn's disease

## Collaboration Agreements

In 2018, IDIVAL received contributions from various entities to support different initiatives.

Collaboration agreements are shown in the following table.

Collaborating entity	Purpose	Contribution
B. BRAUN MEDICAL, S.A.	Collaboration agreement to attend the 1st Course on Ultrasound Applied to Regional Anaesthesia	3000
FIGHT FOR LIFE ASSOCIATION	Collaboration agreement to develop the Nanovaccines based on Listeria and their application of anti-tumour therapy research project	12000
FIGHT FOR LIFE ASSOCIATION	Collaboration agreement to develop the New clinical markers for the diagnosis and treatment of hepatocellular carcinoma research project by the IDIVAL Infection and immunity and digestive pathology group	18000
ALERE HEALTHCARE, S.L.U.	Collaboration agreement to register for the ECCMID Congress	1188
ABBOTT LABORATORIES, S.A.	Collaboration agreement for two healthcare professionals to attend the 22nd SEIMC Congress	700
ABBOTT LABORATORIES, S.A.	Collaboration agreement for two healthcare professionals to attend the 28th ECCMID Congress	1000
TECTON DICKINSON, S. A. U. SEIMC and 28th ECCMID Congress	Collaboration agreement to attend the 22nd National	2000
BIOMERIEUX ESPAÑA, S.A.	Collaboration agreement to attend the 28th ECCMID Congress	1700
SMITH & NEPHEW, S.A.U	Collaboration agreement to attend the 14th SEHAD Congress	1045
ABBOTT LABORATORIES, S.A.	Collaboration agreement for two professionals to attend the 22nd SEIMC Congress	700
SANOFI AVENTIS, S.A.	Collaboration agreement to develop the Statistical Analysis of the Database of patients with Multiple Sclerosis in northern Spain research project	10000
TECTON DICKINSON, S. A. U.	Collaboration agreement to attend the 30th European Congress of Pathology	1782
Boehringer Ingelheim España, S.A.	Collaboration Agreement to regulate pulmonary fibrosis training placements at HUMV.	
CASA DEL CORAZÓN FOUNDATION	Short-term circulatory support with the use of near-infrared spectroscopy	22500
ABBOTT LABORATORIES, S.A.	Collaboration agreement to develop the Nutritional intervention in patients with Cystic Fibrosis research project	9000
TECTON DICKINSON, S. A. U.	Collaboration Agreement to attend the 47th Annual Meeting of the Spanish Cytology Society	1210
ROCHE FARMA, S.A.U.	Collaboration Agreement to finance the Marqués de Valdecilla UH Rheumatology Department Publications Plan 2018	24965
RESPIRA. SPANISH LUNG FOUNDATION - SEPAR; ITURBE	Assessment of the use of Osteopontin to diagnose idiopathic pulmonary fibrosis	5000
RESPIRA. SPANISH LUNG FOUNDATION - SEPAR	Interstitial lung disease biomarkers: Implication of IL-6. General and functional study	12000

Collaborating entity	Purpose	Contribution
<b>Merck Sharp &amp; Dhome España</b>	Collaboration agreement to develop Dr Ricardo Blanco's research project at the Marqués de Valdecilla University Hospital Rheumatology Department	20000
<b>GILEAD SCIENCES, S.L.U.</b>	GILEAD17/30 11th edition of the Multidisciplinary Open Classroom in Hepatology	69100
<b>BOSTON SCIENTIFIC IBERICA S.A.</b>	Educational Grant Agreement for the 17th World Congress on Pain	6600
<b>MERCK, S.L.</b>	Collaboration agreement to develop medical training activities	13310
<b>OXIMESA, S.L.</b>	Collaboration agreement to develop the Improving adhesion to treatment in SAHS patients research project	60000
<b>MEDTRONIC IBERICA, S.A.</b>	Subsidy contract for medical training and teaching of healthcare professionals in thoracic surgery	6400
<b>Merck Sharp &amp; Dhome España; Blanco Alonso, Ricardo</b>	Agreement to support research and the publication of studies	6600
<b>CAJA DE AHORROS DE SANTANDER Y CANTABRIA BANKING FOUNDATION</b>	Collaboration Agreement to finance the 20th edition of the Valdecilla National Awards for Nursing Research Projects	6000
<b>ASOCIACION ESPAÑOLA AND ADOLESCENT PSYCHIATRY</b>	Development and assessment of the effectiveness of an intervention programme based on mindfulness in adolescents with anxiety-depressive symptomatology receiving care at a Child-Youth Mental Health Unit	10000
<b>ROCHE FARMA, S.A.U.</b>	Collaboration agreement to finance the Training programme for Neurology personnel in Cantabria	4000
<b>Merck Sharp &amp; Dhome España</b>	Collaboration agreement to develop the Training programme in pulmonary hypertension	2479
<b>Janssen-Cilag, S.A.</b>	Agreement for cooperation in the IDIVAL scientific research grant programme	75000
<b>ABBOTT LABORATORIES, S.A.</b>	Collaboration agreement to develop the Nutritional intervention in patients with cystic fibrosis research project	6000
<b>Merck Sharp &amp; Dhome España</b>	Collaboration agreement to develop research projects at the Sierrallana Regional Hospital Rheumatology Department	10000

## Clinical practice guidelines

In 2018, IDIVAL researchers participated in the following clinical practice guidelines and consensus documents. The relevance of these guidelines as recommendations developed systematically to help professionals and patients make decisions about the most suitable healthcare and to select the most appropriate diagnostic or therapeutic options when addressing a health problem is unquestionable.

**1.** Albéniz E, Pellisé M, Gimeno García AZ, Lucendo AJ, Alonso Aguirre PA, Herreros de Tejada A, Álvarez MA, Fraile M, Herráiz Bayod M, López Rosés L, Martínez Ares D, Ono A, Parra Blanco A, Redondo E, Sánchez Yagüe A, Soto S, Díaz Tasende J, Montes Díaz M, Téllez MR, García O, Zuñiga Ripa A, Hernández Conde M, Alberca de Las Parras F, Gargallo C, Saperas E, Navas MM, Gordillo J, Ramos Zabala F, Echevarría JM, Bustamante M, González Haba M, González Huix F, González Suárez B, Vila Costas JJ, Guarner Argente C, Múgica F, Cobián J, Rodríguez Sánchez J, López Viedma B, Pin N, Marín Gabriel JC, Nogales Ó, de la Peña J, Navajas León FJ, León Brito H, Remedios D, Esteban JM, Barquiero D, Martínez Cara JG, Martínez Alcalá F, Fernández Urién I, Valdivielso E; on behalf of the Spanish Endoscopic Resection Group of the Spanish Digestive Endoscopy Society. **Clinical guidelines for endoscopic mucosal resection of non-pedunculated colorectal lesions.** Gastroenterol Hepatol. 2018 Mar;41(3):175-190.

## ► RETICS and CIBER with the participation of IDIVAL

The Carlos III Health Institute has promoted several Thematic Networks for Cooperative Research

(RETIC), and Platforms and Biomedical Research Centre Networks (CIBER) with the participation of IDIVAL groups. These organisational structures formed by a variable set of multidisciplinary centres and research groups in biomedicine aim to conduct cooperative research projects of general interest, centred on

a common specific area for the achievement of scientific objectives that would be difficult to achieve in a context of more restricted execution. IDIVAL participates in four CIBERS, five RETICS and three platforms. In 2018, IDIVAL coordinated the Platform for Innovation in Medical and Health Technologies (ITEMAS).

CIBER / RETIC / Platform	IDIVAL Group or Unit	PI
Mental Health CIBER (CIBERSAM)	Psychiatry	Benedicto Crespo Facorro
Neurodegenerative Diseases CIBER (CIBERNED)	Neurodegenerative Diseases	Jon Infante Ceberio
Epidemiology and Public Health CIBER (CIBERESP)	Epidemiology and Public Health	Javier Llorca Díaz
Bioengineering, Biomaterials and Nanomedicine Photonics Engineering (CIBER-BBN)	Photonics Engineering	José Miguel López Higuera
Spanish Network for Research in Infectious Diseases (REIPI)	Epidemiology and Pathogenic and Molecular Mechanisms of Infectious Diseases and Clinical Microbiology	Carmen Fariñas Álvarez
Network of Maternal and Children's Health and Development (RED SAMID)	Marqués de Valdecilla University Hospital	María Jesús Cabero
Thematic Network of Multiple Sclerosis	Cephalea Clinic and Genetics	Agustín Oterino Durán
Renal Research Network (REDinREN)	Transplantation and autoimmunity	Marcos López Hoyos
Research Network in Inflammation and Diseases Rheumatics (RIER)	Genetic epidemiology and atherosclerosis in systemic inflammatory diseases	Miguel Ángel González-Gay Mantecón
Biobank Platform	IDIVAL	Pascual Sánchez Juan
Platform for Innovation in Healthcare Technologies (ITEMAS)	IDIVAL	Galo Peralta Fernández
Platform for Clinical Research and Clinical Trial Units (Scren)	IDIVAL	Benedicto Crespo Facorro

## O Innovation

### Introduction

Innovation is a key element of regional economic development. From the point of view of society, innovation in the healthcare sector means continuous improvement of the efficiency and productivity of national health systems, significantly improving patients' quality of life.

In Cantabria we are lucky enough to have the Marqués de Valdecilla University Hospital, which as well as attracting healthcare expertise can be regarded as one of the region's economic driving forces, as it transforms this knowledge into value.

IDIVAL's Innovation area consists of 5 people, structured as the Research Results Transfer Office (OTRI) and the Innovation Unit, and EVaTec®.

**Some of its milestones in 2018 were:**

- An ambitious intra-entrepreneurship programme has been designed at the Cantabrian Health Service in collaboration with the Botín Foundation and Santander International Entrepreneurship Centre (CISE).

- The EVaTec (Valdecilla Evaluation of Healthcare Technologies) has been consolidated with the development of premarket and postmarket for healthcare sector companies.

### ITEMAS platform

The Platform for Innovation in Medical and Health Technologies (ITEMAS), promoted and financed by the Carlos III Health Institute (ISCIII), is a structure to support innovation in healthcare. It exists to help the innovation ideas of healthcare professionals generate value for the system, by favouring technology transfer, the culture of

innovation, and communication with the rest of society. The main tool of ITEMAS is the creation of Innovation Support Units (UAL) in hospitals. These provide the resources and help needed so that healthcare professionals can turn their ideas and discoveries into reality for patients, creating a more sustainable National Health System.

Through its Innovation Unit, IDIVAL has been a node of this Platform since it began in 2010, and

currently finances the contracts of 3 of the professionals in the Area.

In 2018 Galo Peralta, Management Director of IDIVAL, began coordinating the Platform at the national level.

## Transfer

For innovation and the transfer of research results to the market to be effective and have an impact on society, it is necessary to create an economic and legal environment conducive to innovation and economic development.

IDIVAL adheres to Industrial Property Regulations, which govern the management and use of intellectual and industrial property rights and transfers to the market within the area of responsibility of the Healthcare Administration of Cantabria.

**Since the establishment of the OTRI, the following have been presented:**

- 23 Spanish patent applications to the Spanish Office of Patents and Brands (OEPM).
- 18 international patent applications through the Patent Cooperation Treaty (PCT).
- 4 European patent applications to the European Patent Office (EPO).
- 4 utility model applications to the Spanish Office of Patents and Brands (OEPM).
- 1 community design to the Spanish Office of Patents and Brands (OEPM).
- 3 Spanish brand applications to the Spanish Office of Patents and Brands (OEPM).

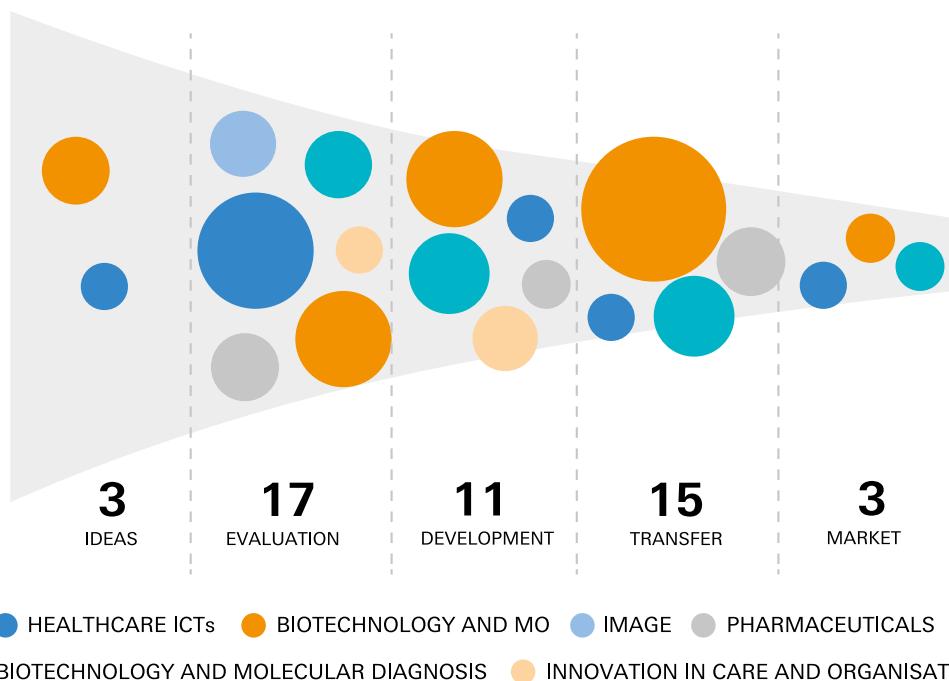

Of these, the following were processed in 2018:

Application no.	Title	Applicants	Inventor
PCT/EP2018/057681	System and device for positioning medical needles	CHS/UC	Pedro Prada Gómez Juan Ignacio Raba Díez Luis Rodríguez Cobo Adolfo Cobo García Olga Conde Portilla Jose Miguel López Higuera Jose Julián Valdiande Gutiérrez
PCT/EP2018/057761	Method for predicting therapeutic response to antipsychotic drugs	CHS/UC/CSIC/CIBER	Benedicto Crespo Facorro Jesús Vicente Sainz Maza
U201830853	Protective dressing for abdominal viscera in negative pressure therapy	CHS	Federico Castillo Suescun
U201830919	Reference navigation equipment in robot-assisted surgery with stereostatic navigation of organs and soft tissue in the pelvic area of a patient	CHS	Marcos Gómez Ruiz Alberto Calleja Iglesias Felipe Alonso Horga
P201830628	Multivalent vaccination for the treatment and prevention of tuberculosis, listeriosis and pneumonia	IDIVAL	Carmen Álvarez Domínguez Héctor Terán Navarro David Salcines Cuevas Ricardo Calderón González Isabel García Marco Marradi Soledad Penadés Ullate Elisabet Frande Cabanes

Application no.	Title	Applicants	Inventor
PCT/EP2018/070724	Cartridge, device and procedure for the detection, capture, identification and counting of circulating tumour cells	IDIVAL/CHS/UC/TEKNIKER/CELLBIOCAN	José Luis Fernández Luna Fernando Moreno García Ángela Barreda Gómez Francisco González Fernández Deitze Otaduy del Paso
US16/079,477	Use a GNP-LLO91-99 complex for the treatment and prevention of cancer	IDIVAL/CHS	Carmen Álvarez Domínguez Ricardo Calderón González Elisabet Frande Cabanes Sonsoles Yáñez Díaz Eva Ferrández Fernández Soledad Penadés Ullate Marco Marradi Isabel García Martín Fernando Rivera Herrero
EP17715958.9	Use a GNP-LLO91-99 complex for the treatment and prevention of cancer	IDIVAL/CHS	Carmen Álvarez Domínguez Ricardo Calderón González Elisabet Frande Cabanes Sonsoles Yáñez Díaz Eva Ferrández Fernández Soledad Penadés Ullate Marco Marradi Isabel García Martín Fernando Rivera Herrero
P201800217	System and method for a blood sample cell count	IDIVAL/UC/FMV	Manuel Pérez Cagigal Jose Luis Arroyo Rodríguez Antonio Fuentes Ruiz Pedro José Valle Herrero

## Innovation support

- According to the innovation funnel, ideas are distributed as follows:

## Innovation support

IDIVAL's innovation management complies with UNE standard 166.002:2014, and its management system has been certified by DNV.

Its main activities are:

### Promotion of the Culture of Innovation

To promote the culture of innovation in the Valdecilla environment, IDIVAL organises a series of courses and workshops that encourage creativity and teamwork, issues reports, and provides training on specific aspects of the innovation process, etc.

The Innovation Unit has participated in various activities presented in the training section.

### Technological Surveillance Newsletter

IDIVAL publishes a regular newsletter on technological surveillance which covers the bases of competitive financing for public and

private research and innovation projects, internal and external symposia relating to relevant research and innovation, and the latest publications produced in the Valdecilla environment. This newsletter will be available on the IDIVAL website and emailed to subscribers.

### Innovation Funnel

The innovation projects managed by IDIVAL are classified into FIVE phases, defined below:

**1. Capture.** In this phase, the ideas that the unit captured in 2018 are considered, as well as those captured in previous years that did not advance to a later stage.

**2. Analysis:** This phase considers proposals for which market research, patentability reports, or product value or technical feasibility reports are being carried out.

**3. Development:** This phase includes ideas being developed

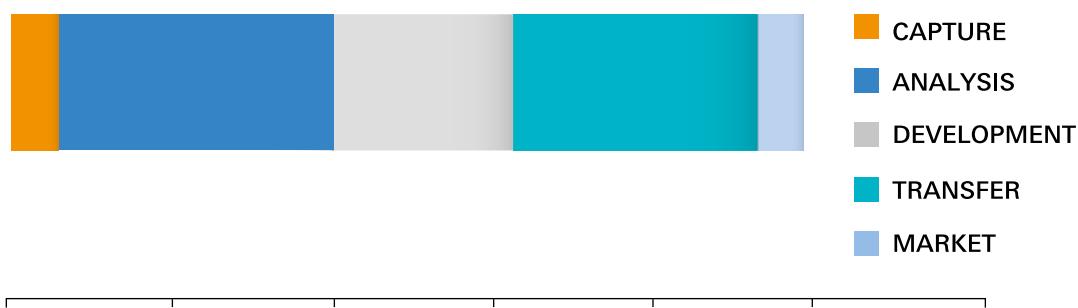

in the form of prototypes, approvals and/or trials.

**4. Transfer:** This phase includes ideas that have generated some type of commercial activity, e.g., contact with companies or potential licensees.

**5. Market:** This phase includes ideas in any of the following situations:

- a) Licensed to industry.
- b) Generated a spin-off.
- c) Forms part of an exclusive agreement with a company.
- d) Implemented in a healthcare centre (in the case of healthcare and organisational innovations).

- In 2018, the Innovation Area managed 44 ideas, distributed among the five stages as follows:

## EVaTec®

**Valdecilla**  
Hospital Virtual Valdecilla

**Valdecilla**  
Instituto de  
Investigación  
Sanitaria  
**IDIVAL**

EVaTec® is a project which aims to apply Human Factor Engineering as a tool for assessment and implementation of medical technology. It is the result of the collaboration of HUMV, the Valdecilla Virtual Hospital and IDIVAL, and its team is made up of professionals from the different institutions.

It has an alliance with Medstar Health Research Institute- National Center for Human Factors in Healthcare, Washington, a centre of recognised international prestige.

 **MedStar Health**  
**National Center for**  
**Human Factors in Healthcare**

EVaTec® considers the human factor to be a tool for making changes in organisations and improving patient safety. In 2018 it worked with the Cantabrian Health Service (CHS) in the technical assessment of volumetric and syringe infusion pumps in the context of a public tender to acquire these systems for a price of over 1 million euros, in the first action by Spain in this field. Human Factor methods were applied to assess them, such as heuristics and usability tests.

25 professionals participated in the usability test from units like the Day Hospital, ICU, neonatal ICU, and anaesthesia, the three hospitals in the region.

This assessment provided the opportunity for a deeper examination of the technology and how it can adapt to the needs of the different units where it will be used, so EVaTec also collaborated in its implementation, developing a strategy based on training facilitators, leading professionals in the use of technology in the different units and hospitals.

At present EVaTec® is ready to face new challenges, such as competing for funding, working with medical technology development companies to favour the development of more usable and safer devices, and the possibility of evaluating new technologies in the Cantabrian Health System.

## O Research line

**Pathological plasticity of myocardium.** We are analysing the involvement of transforming growth factors beta (TGF- $\beta$ s,

activin and BMPs) in the molecular pathophysiology of myocardial remodelling secondary to haemodynamic stress and in altered development.

**1. 1. Pathological plasticity of myocardium subjected to pressure overload.** Aortic stenosis is the most frequent valvular cause for surgery in our area and is associated with a left ventricular

hypertrophy which is a response of pathological significance in these patients. We are studying the molecular mechanisms of myocardial remodelling in this context using samples of myocardium of patients with aortic stenosis, a murine experimental model of this pathology and cell cultures.

**1.2. Developmental variations and pathological plasticity of myocardium in Down syndrome.** El ratón Ts65Dn (trisomía de una región del cromosoma 16 homóloga a la del 21 humano) es un modelo experimental de síndrome de Down que reproduce sus características fenotípicas. Estudiamos la participación de la familia TGF-β en las alteraciones del desarrollo cardíaco encontradas en este modelo.

**2. Pathological plasticity of the aortic wall.** We are analysing the involvement of transforming growth factors beta in the molecular pathophysiology of the remodelling of the aortic wall in relation to aneurysm formation. Progressive dilation of the aorta carries high rates of morbidity and mortality. We are studying the role of TGF-βs in the molecular pathophysiology of the pathological remodelling of the aortic wall in aneurysm formation. We intend to: 1) Establish signalling pathways involved in the vascular chronic inflammatory process responsible for progressive aortic dilatation; 2) Identify biomarkers to assess the risk of rupture and assist in surgery indication; and 3) Establish new therapeutic targets

### 3. Pathological plasticity in the central nervous system.

#### 3.1 Pathological neuronal plasticity of the nociceptive system.

The mechanisms linking TGF-βs and modulation of pain transmission, basally and in pathological plasticity models of the nociceptive system, are being analysed.

Chronic neuropathic pain is highly resistant to conventional drug treatment. We have demonstrated the involvement of the TGF-β family in processing the physiological nociceptive signal. We intend to study: a) Molecular mechanisms involving TGF-β in neuropathic pain, and experimental inflammatory pain; b) The interaction between TGF-βs and the endogenous opioid system; c) The involvement of TGF-βs in adaptive processes in chronic opioid therapy; d) The involvement

of TGF-βs in the hypoesthesia of experimental Down syndrome.

#### 3.2. Pathological neuronal plasticity in learning and memory circuits.

We are analysing the mechanisms that connect the TGF-β family with cognitive variations and neurodegenerative disease in Down syndrome.

Down syndrome causes more cases of mental retardation and all patients develop an Alzheimer-type neuropathology early on. Deficits in the synthesis and transport of trophic factors could mediate these variations. Furthermore, the TGF-β family is involved in the pathophysiology of experimental Alzheimer's disease. We intend to evaluate the role of TGF-β in the cognitive variations found in the Ts65Dn mouse and evaluate different therapeutic strategies.

#### hematoma and subsequent aneurysm and aortic rupture.

## ○ Research lines

coronary angiography -including IVUS and optical coherence-, coronary CT angiography and Magnetic resonance Imaging). Our main areas of research are:

### Cardiovascular Therapy.

- a. Immunosuppression in Heart Transplantation, specifically the clinical implementation of new immunosuppressive approaches with proliferation signal inhibitors (mTOR inhibitors).
- b. Drug eluting stents, especially in the setting of left main disease.
- c. Percutaneous Structural Heart Disease Interventions

- Atrial septal defects closure

- Transcatheter aortic valve implantations (TAVI)

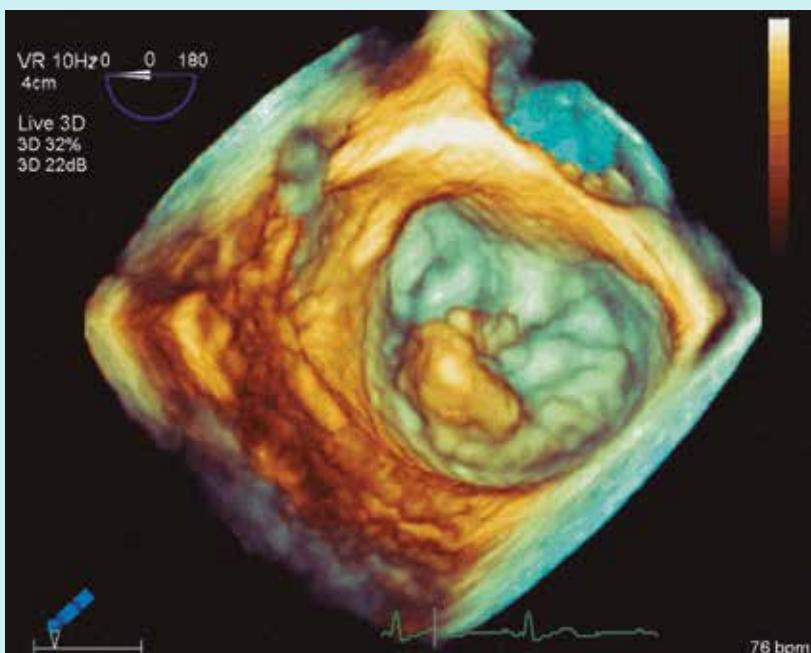

- Prosthetic leaks closure -Left atrial appendage closure

d. Preconditioning in acute coronary syndromes..

### Cardiovascular Diagnosis:

- a. Genetics in mitral valve prolapse
- b. Prevalence and clinical significance of Coronary aneurysms.

The Cardiovascular Research Group is actively working in the fields of Heart Failure and Heart Transplantation, Interventional Cardiology and the different modalities of Cardiac Imaging (2D and 3D echocardiography,

**Figura.** Three-dimensional echocardiogram demonstrating a mitral valve prolapse

### Multimodality Cardiac Imaging.

1. Diagnosis and characterization of Cardiac Allograft Vasculopathy with intravascular ultrasonography (IVUS), optical coherence and virtual histology.
2. Transesophageal three-dimensional echocardiography in atrial septal defects and mitral valve prolapse.
3. Three-dimensional echocardiography evaluation of the mitral annulus.
4. Strain and strain-rate in diabetic and oncologic cardiomyopathy

## O Research lines

### 1. Hepatitis C.

To know the real epidemiology of hepatitis C virus infection in our country. To evaluate the role of

the innate immune system in the spontaneous clearance of C virus infection, as well as the evolution towards chronicity and its implication in response / failure to treatment with new direct acting antiviral agents (ADIs). Regarding the therapeutic failure, the viral variants associated with resistance will also be studied. In addition, we will study whether the hepatitis C virus is capable of

producing endothelial dysfunction, subclinical atheromatosis, disorder of mineral and bone metabolism or neurocognitive manifestations and its potential reversibility after curing the infection with the new ADD agents. Finally, we intend to study whether regression occurs in liver fibrosis after the response to DDA and the pathogenic role of the enzyme Lisil-oxidase like 2 (LOXL2) in this process.

## 2. Molecular characterization of specific cases of human cancer.

Potential implications in diagnosis and therapy. Oncogenic signaling mechanisms that control initiation, progression and response to therapy. Study from a personalized point of view, advanced cases of human cancer that at present lack effective therapies. Currently we have research projects in liver cancer as well as some types of aggressive skin cancers such as advanced melanoma, Merkel cell carcinoma and cutaneous T-cell lymphoma.

## 3. Fatty Liver Disease (EHDG).

Obesity and insulin resistance are associated with a chronic inflammatory state. Current evidence indicates that the activation of the signal transduced at the level of the innate immune system by receptors such as TLRs and NLRs plays a decisive role in the genesis of this inflammatory state. Both receptor families, together with RLRs, make up what we know as pattern recognition receptors (PRRs). However, the role played by PRRs in the pathogenesis of HDD is largely unknown. It is possible that differences in the gene and protein expression of these peripheral, hepatic and fatty receptors between obese and non-obese subjects translate into a different susceptibility to the development of fatty liver disease.

On the other hand, the severity of the histological lesion of GHTD has been associated with the concomitant presence of hypopnea sleep apnea syndrome. The role that intermittent hypoxia plays in the development of liver injury has been studied previously. However, there are no studies aimed at evaluating the effect of hypercapnia maintained at the hepatic level. For this reason, we intend to analyze the effect of chronic hypercapnia, with or without added hypoxemia, at the liver level with ex vivo models of primary culture of immortalized hepatocytes, by analysis of gene expression associated with glucose and lipid metabolism and regulatory genes of the immune response, as well as assessing the inflammatory response induced in these cells by the infusion of lipopolysaccharide.

The partial deficiency of the lysosomal acid lipase (LAL) enzyme is an inherited, autosomal recessive pathology of lipid metabolism characterized by accumulation in lysosomes, especially in the liver of cholesterol and triglyceride esters, which may erroneously be diagnosed in the adult as HDSH. This pathology is due to mutations of the LAL gene (LIPA), of which more than 40 mutations have been described. We intend to evaluate whether the active screening by mass sequencing of the LIPA gene in adults with a diagnosis of GDHD could be relevant from a clinical point of view.

**4. Alcoholic liver disease.** To study the pathophysiological mechanisms of acute alcoholic hepatitis and the search for molecular targets. Analysis of the hepatic transcriptome in patients with alcoholic liver disease for the development of molecular signatures of gene expression.

## 5. Liver cirrhosis and portal hypertension.

To characterize the natural history of hepatic cirrhosis and factors that may influence the portal pressure gradient. To evaluate the long-term role of new oral anticoagulants in the survival and development of complications of portal hypertension in patients with liver cirrhosis.

## 6. Liver transplantation.

To study non-invasive blood biomarkers of clinical events related to liver transplantation (rejection, infection, vascular pathology, biliary disease, and short- and long-term survival of the graft).

## 7. Cholestatic and autoimmune liver disease.

Characterize the natural history and physiopathological mechanisms of cholestatic and autoimmune liver diseases.

## Clinical Trials

**1.** Montserrat Rivero Tirado. **Estudio de Fase III, de grupos paralelos, controlado con placebo, doble ciego, aleatorizado, multicéntrico, internacional, para investigar la seguridad y eficacia de los comprimidos de liberación modificada de propionil-L-carnitina clorhidrato (ST 261) en pacientes afectados por colitis ulcerosa leve bajo tratamiento oral estable.** ST261 DM 11 006. SIGMA-TAU INDUSTRIE FARMACEUTICHE RIUNITE S.P.A..

**2.** Javier Crespo García. **Estudio fase 3 de daclatasvir en combinación con peginterferón lambda 1a y ribavirina (RBV) o telaprevir en combinación con peginterferón alfa-2a y RBV en pacientes con hepatitis C crónica con genotipo 1b que no han recibido tratamiento previo o recidivantes previos al tratamiento con alfa/RBV.** AI452-021. BRISTOL-MYERS SQUIBB INTERNATIONAL CORPORATION (BMSIC).

**3.** Javier Crespo García. **Ensayo clínico aleatorizado de fase III para evaluar la eficacia y la seguridad del régimen en combinación de MK 5172/MK 8742 en sujetos que han presentado fracaso con un tratamiento previo con interferón pegilado y ribavirina (P/R) con infección crónica por el VHC GT1, GT4, GT5 y GT6.** 5172-068.

seguridad de la vacuna de toxoides de Clostridium difficile en sujetos en riesgo de desarrollar infección por C. difficile. H-030-014.

**10.** Javier Crespo García. **Estudio de fase 3, multicéntrico, aleatorizado, con doble enmascaramiento, a largo plazo y controlado con placebo para evaluar la seguridad y la eficacia del ácido obetocílico en sujetos con esteatohepatitis no alcohólica.** 747-303. INTERCEPT PHARMACEUTICALS INC..

**11.** Javier Crespo García. **Estudio fase I, doble ciego, aleatorizado, controlado con placebo, de primera administración en humanos de JNJ-56136379 administrado vía oral para examinar la seguridad, tolerabilidad y farmacocinética tras dosis únicas ascendentes y un régimen de dosis múltiple en voluntarios sanos (Parte I), y tras varios regímenes de dosis múltiple en sujetos con hepatitis B crónica (Parte II).** 56136379HPB1001. JANSSEN SCIENCES IRELAND UC..

**12.** Javier Crespo García. **Estudio de fase II, abierto, multicéntrico, aleatorizado para evaluar la eficacia y seguridad de la combinación a dosis fija (CDF) de sofosbuvir/velpatasvir y la CDF de sofosbuvir/velpatasvir más ribavirina en pacientes con infección crónica por el VHC de genotipo 3 y cirrosis.** GS-US-342-2097. GILEAD SCIENCES, INC.

**13.** Javier Crespo García. **Ensayo Multicentrico, aleatorizado, doble ciego y controlado con placebo para evaluar emricasán (IDN 6556), un inhibidor de la caspase administración oral, en sujetos con Fibrosis por Esteatohepatitis no alcohólica (EHNA).** IDN-6556-12. PPD GLOBAL LTD.

**14.** Javier Crespo García. **Ensayo multicéntrico, aleatorizado, doble ciego y controlado con placebo para evaluar emricasán, un inhibidor de la caspasa de administración oral, en sujetos con cirrosis por esteatohepatitis no alcohólica (EHNA) e hipertensión portal grave.** IDN-6556-14. PPD GLOBAL LTD.

**15.** Javier Crespo García. **Estudio aleatorizado, doble ciego, controlado con placebo, multicéntrico, de rango de dosis de prueba de concepto**

y de 24 semanas de tratamiento con IVA337 en pacientes adultos con esteatohepatitis no alcohólica (EHNA). A randomized, double-blind, placebo-controlled, multicenter, dose-range, proof-of-concept, 24-week treatment study of IVA337 in adult subjects with nonalcoholic steatohepatitis (NASH). IVA\_01\_337\_HNAS\_16\_002. INVENTIVA SAS.

**16.** Javier Crespo García. **Estudio de fase III, multicéntrico, aleatorizado, doble ciego, controlado con placebo para evaluar la eficacia y seguridad de Elafibranor en pacientes con esteatohepatitis no alcohólica (EHNA) y fibrosis.** GFT505-315-1.

**17.** Javier Crespo García. **Investigación sobre la eficacia y la seguridad de tres niveles de dosis de semaglutida subcutánea administrada una vez al día frente a placebo en sujetos con esteatohepatitis no alcohólica.** Ensayo clínico de 72 semanas de duración, aleatorizado, doble-ciego, controlado con placebo, con tres grupos paralelos, multicéntrico, multinacional. NN9931-4296. NOVO NORDISK PHARMA, S.A..

**18.** Montserrat Rivero Tirado. **Estudio en fase IIb, doble ciego, aleatorizado, controlado con placebo, con grupos paralelos y de búsqueda de dosis de PF-06651600 y PF-06700841 por vía oral como tratamiento de inducción y tratamiento crónico en pacientes con colitis ulcerosa moderada o grave.** B7981005. ICON CLINICAL RESEARCH LIMITED.

**19.** Javier Crespo García. **Estudio en fase III, aleatorizado, doble ciego y controlado con placebo para evaluar la seguridad y la eficacia de selonsertib en pacientes con cirrosis compensada debida a esteatohepatitis no alcohólica (EHNA).** GS-US-384-1944. GILEAD SCIENCES, INC.

**20.** Montserrat Rivero Tirado. **Estudio de prueba de concepto de BI 655130 como tratamiento complementario en pacientes con colitis ulcerosa activa de leve a moderada durante tratamiento con un inhibidor de TNF.** 1368.10. BOEHRINGER INGELHEIM ESPAÑA, S.A..

**21.** Javier Crespo García. **Estudio de fase III, aleatorizado, doble ciego,**

**controlado con placebo para evaluar la seguridad y eficacia de selonsertib en pacientes con esteatohepatitis no alcohólica (EHNA) y fibrosis en puentes (F3).** GS-US-384-1943. GILEAD SCIENCES, INC.

**22.** Javier Crespo García. **Ensayo fase II, multicéntrico, doble ciego, aleatorizado, de grupos paralelos y controlados con placebo para investigar la seguridad, tolerabilidad, farmacodinámica y farmacocinética de distintas dosis orales de BI 1467335 durante 12 semanas de tratamiento, en comparación con placebo en pacientes con evidencia clínica de EHNA.** 1386.4. BOEHRINGER INGELHEIM ESPAÑA, S.A..

**23.** Javier Crespo García. **AURORA: Estudio de fase III, multicéntrico, aleatorizado, con doble enmascaramiento, controlado con placebo, para evaluar la eficacia y seguridad de cenicriviroc para el tratamiento de la fibrosis hepática en pacientes adultos con esteatohepatitis no alcohólica.** 3152-301-002. ALLERGAN PHARMACEUTICAL INTERNATIONAL, LTD.,.

**24.** Javier Crespo García. **Estudio de fase 2a, aleatorizado, parcialmente ciego y controlado con placebo para evaluar la eficacia, la seguridad y la farmacocinética del tratamiento durante 24 semanas con dosis múltiples de JNJ-56136379 en monoterapia y en combinación con un análogo de nucleós(t) idos en pacientes con infección crónica por el virus de la hepatitis B.** 56136379HPB2001 (JADE). JANSSEN-CILAG, S.A..

**25.** Montserrat Rivero Tirado. **Estudio de fase IIIb, multicéntrico, aleatorizado, enmascarado ciego y controlado con fármaco activo para comparar la eficacia y seguridad de ustekinumab frente a adalimumab en el tratamiento de pacientes con enfermedad de Crohn con actividad moderada o grave previamente no tratados con fármacos biológicos.** CINTO1275CRD3007 (SEAVUE). JANSSEN-CILAG, S.A..

**26.** Javier Crespo García. **Estudio en fase II, aleatorizado, doble ciego, controlado con placebo**

y de intervalo de dosis para evaluar la seguridad, tolerabilidad, farmacocinética y eficacia de EDP-305 en pacientes con colangitis biliar primaria (CBP) con o sin respuesta insuficiente al ácido ursodesoxicólico (AUDC). EDP 305-201.

27. Javier Crespo García. **Estudio de inducción en fase III, multicéntrico, aleatorizado, doble ciego, de grupos paralelos y controlados con placebo sobre mirikizumab en pacientes con fracaso convencional y biológico con colitis ulcerosa activa de moderada a grave.** I6T-MC-AMAN. ELI LILLY & COMPANY.

28. Javier Crespo García. **Estudio de mantenimiento en fase III, multicéntrico, aleatorizado, doble ciego, de grupos paralelos, controlado con placebo sobre mirikizumab en pacientes con colitis ulcerosa activa de moderada a grave.** I6T-MC-AMBG.

29. Javier Crespo García. **Estudio multicéntrico, aleatorizado, doble ciego para evaluar la seguridad, tolerabilidad y eficacia de un tratamiento que combina tropifexor (LJN452) y cenicriviroc (CVC) en pacientes adultos con esteatohepatitis no alcohólica (EHNA) y fibrosis hepática (TANDEM).** CLJC242A2201J. NOVARTIS FARMACEUTICA, S.A..

30. Montserrat Rivero Tirado. **Estudio de inducción multicéntrico, aleatorizado, doble ciego y controlado con placebo para evaluar la eficacia y la seguridad de upadacitinib (ABT-494) en sujetos con enfermedad de Crohn de moderada a grave que han tenido una respuesta insuficiente o intolerancia a un tratamiento biológico.** M14-431. ABBVIE DEUTSCHLAND GMBH&CO K.G.

31. Javier Crespo García. **Estudio de fase 3, doble ciego, aleatorizado, controlado con placebo, multicéntrico para evaluar la eficacia y la seguridad del ácido obeticólico en pacientes con cirrosis compensada debida a esteatohepatitis no alcohólica.** 747-304. INTERCEPT PHARMACEUTICALS INC..

## ○ Research lines

### Line 1. Cellular biology of hemopathies

1. Molecular characterization of hematological neoplasms (with special focus on the epigenetic modulation of the BCL6 and MYC genes), as well as the application of new molecular techniques for the search of new markers with early diagnostic potential and of application for monitoring and the search for therapeutic targets

2. Analysis of post-translational modifications in chronic lymphatic leukemia: study of the prognostic value and therapeutic applications. Study of purine analogue resistance mediated by kinases.

3. Biology and molecular genetics of MDS: prospective tracking of alterations in the FA-BRACA route.

### Line 2. Therapeutic innovation

1. Preclinical evaluation of new therapeutic strategies in hematological neoplasms directed against specific targets of the tumor cell and their translation to the clinic.

2. Start-up and conduct of clinical trials in early stages (I and II) for different hematological diseases, both promoted by the industry and by cooperative groups.

3. Participation in clinical trials in advanced stages (III) in hematological diseases.

4. Clinical research of new strategies to improve the efficiency, results and quality of life of patients. Among others: optimization of the management of anticoagulant therapies; improvement of blood products and transfusion activity; collaboration with the Home Hospitalization unit.

### Line 3. Transplant of hematopoietic progenitors, cellular therapy and immunotherapy

1. Improvement of the clinical results of allo-TPH in patients with different neoplastic pathologies
2. Study of different immunosuppression modalities, including post-transplant cyclophosphamide in high-risk allogeneic transplant.
3. Search for new therapeutic strategies in acute or chronic EIHC, such as infusion of patient CMN treated with metopsi-psoralen and subjected to extracorporeal phototherapy.
4. Research on the application of specific anti-CMV vaccine in patients with hematopoietic allogeneic transplantation to reduce associated complications.
5. Research (from the preclinical to the clinic) of new cell therapy strategies in patients with hematological diseases subjected or not to transplantation of hematopoietic progenitors: Clinical application of lymphocyte immunotherapy with modified T-receptor (CAR-T) in lymphoid neoplasms, mesenchymal cells for the treatment of GVHD of allogeneic transplantation and cell populations against CMV and EBV viruses

## O Research lines

### Line 1: Transplantation of solid organs

#### 1. Non-invasive biomarkers in blood and urine of clinical

events transplant related of solid organs (rejection, infection, immunosuppression conversion, short-term and long-term graft survival). This line focuses on soluble and cellular markers related to the immune response in allograft transplantation and more recently. In addition, we included the study of molecular profiles predictive of failure of renal function and

increase of fibrosis in initial stages. Together with our own studies, we participated in REDINREN (Research Network on Renal Diseases: RD16 / 0009/027). At the same time, we have transferred the study of biomarkers to lung transplantation since it is a very potent clinical activity in our center, which has already allowed us to obtain results quickly, which have demonstrated specific

differences between kidney and lung transplantation. Soluble markers of humoral rejection. This line of research has made it possible to transfer to the clinic the monitoring of anti-HLA antibodies in desensitization treatments in renal transplants of patients hypersensitized with live donors. Thanks to this line, our center attracts patients from other regions and has allowed us to be part of the national cross-renal donation program. This line of work is also included in the REDINREN program and we lead within the network. We consider this line one of the greatest potential of clinical transference.

**2. Immunoregulation in kidney and lung transplantation.** To evaluate the effect that changes in blood and tissues of cellular populations with immunoregulatory capacity may have on the long-term evolution of the transplant in general and of the renal in particular. In the case of renal transplantation we have found a clear influence of the level of pharmacological immunosuppression on the number and function of regulatory T cells. In addition, in lung transplantation we have verified how a certain number of regulatory T cells in blood prior to transplantation play a prognostic role in the incidence of rejection. This line together with the previous one receives regular competitive financing from the ISCIII.

### 3. Intensive treatment of donors to increase the number of grafts suitable for transplantation.

Intensive treatment of multiorgan donors based on specific ventilatory therapy, extrapulmonary water-guided hemodynamic goals, and hormone therapy increases the number of transplantable pulmonary grafts. This increase in the number of available pulmonary grafts is due to the improvement in oxygenation of the lungs in the period between death and organ harvesting. This specific treatment is associated with an increase in the rest of organs to improve the perfusion and oxygenation of all of them.

The use of regional normothermic perfusion to deceased donors by circulatory criteria has allowed to reduce the ischemic damage of the grafts due to the deleterious effect of the cardiac arrest, and to simultaneously extract and successfully transplant all types of grafts (lungs, liver, Pancreas and kidneys). Both lines of research have

developed multicentric studies with funding from the Mutua Madrileña Foundation.

### Line 2: Inflammation and autoimmune diseases

**1. Inflammatory diseases associated with aging** (giant cell arteritis, polymyalgia rheumatica and rheumatoid arthritis of onset in the elderly). These syndromes, which are very prevalent in the elderly population, are mainly treated with corticosteroids, which are accompanied by a high toxicity. Studies investigate the role of cytokines, regulatory cells and alterations of innate immunity, with the ultimate goal of developing less toxic and more effective therapies. We used cellular markers (phenotypic and functional), serological and genetic (expression and genetic polymorphisms). More recently we have started a line of work on arthritis in connection with FIS-funded FG-beta signaling.

**2. Antiphospholipid syndrome.** The role that the innate immune response (specifically the TLR) and the different immunoregulatory populations may play in the pathogenesis of this disease is studied. We also analyzed the clinical results of the Unit of Autoimmune Gravidarum Pathology and performed a beta study to evaluate new methods of measurement of diagnostic antibodies in this pathology. In particular, we are validating the usefulness of new immunoglobulin isotypes (IgA) against phospholipids as well as the value of other antibodies against other phospholipids not included in the diagnostic criteria so far.

**3. Biomarkers.** The group has a large library associated with clinical data collected since 1997. This library allows the study and validation of new markers involved in the diagnosis, prognosis and response to the treatment of autoimmune pathology. In addition, we have all the type of tests necessary for the development and serological studies of autoimmunity. As a result of the exploitation of this library we have defined new diagnostic uses of antibodies not explored until now (anti-PR3) in pathologies such as inflammatory bowel disease with IDIVAL's group of digestive pathology.

Also using this library, we began to take the first steps in an ambitious

project that proposes the use of nanosensors as a tool in the diagnosis of patients with systemic diseases of unknown etiology such as scleroderma. We intend to perform the concept test, implementation and tuning of the prototype diagnostic test plate for its application in the clinical environment.

## ○ Research lines

**Line 1. Role of motor neuron survival factor (SMN) acetylation in the Cajal nuclear body assembly (Cajal body, CB): importance in spinal muscular atrophy (SMA).**

The core of Cajal (CB, Fig. 1) is the nuclear power plant that directs the final assembly and quality control of the snRNPs and snoRNPs (small nuclear nucleolar ribonucleoproteins) involved in the splicing of pre-mRNAs And in the maturation of pre-rRNAs. The

mutation in the gene encoding one of its essential proteins, SMN (Survival Motor Neuron), is responsible for spinal muscular atrophy (SMA), which causes motor neuron degeneration and is the main cause of genetic-based mortality in the childhood. In addition to SMNs and snRNPs and snoRNPs, another essential component of CB is the coilin nucleating protein. The fundamental objective of this line is to analyze the mechanisms that regulate the molecular assembly of the CB and its importance in the SMA. We have recently shown that the SMN protein is a substrate of SUMO1 and that its conjugation with SUMO is another factor regulating the formation of CBs. We are currently studying the impact of another post-translational modification of SMN, acetylation, on the assembly of snRNPs and snoRNPs and the formation of CBs. Our preliminary experiments indicate that SMN is acetylated by acetyltransferase and CBP analysis with mass spectrometry demonstrates that acetylation modifies the interactions of the SMN with its target proteins, affecting the cellular

localization of the protein and its ability to nuclear CBs.

**Line 2. Importance of dysfunction of nuclear compartments of spinal motor neurons in the cellular and molecular pathophysiology of spinal muscular atrophy (SMA) in murine model SMNd7.**

As discussed above, mutation or deletion of the SMN1 gene in SMA produces a severe deficiency of the functional SMN protein, leading to degeneration and death of spinal neurons. In the pathophysiology of SMA, three essential mechanisms exist at the level of spinal motoneurons: splicing dysfunction of pre-mRNAs, axonal transport alterations and dysfunction of the neuromuscular synapse. All of them contribute to neurodegeneration and, consequently, to atrophy and muscular paralysis. Our research focuses on deepening the nuclear mechanisms affected by the disease, which results in an alteration of the nuclear metabolism of the RNAs in

the motoneurons (Fig. 2). SMA has reported a deficit in the assembly of snRNPs for the spliceosome, the molecular machinery that governs the splicing of pre-mRNAs. The Cajal nuclear body (CB) is a nuclear power plant that governs the assembly and nuclear trafficking of snRNPs and snoRNPs to the spliceosome and nucleolus, respectively. In this context, we consider that the loss of CBs and their interactions with the nucleolus, required for the transport of snoRNPs involved in nucleolar processing of rRNAs, are responsible for the severe disruption of splicing and biogenesis of ribosomes in the motoneurons of The SMA. To investigate these nuclear mechanisms we used the transgenic mouse SMNd7 as a model of SMA type I, the most severe that causes the degeneration of motor neurons and death of animals between postnatal days 13 and 16.

**Line 3. Neuronal response to DNA damage: importance in neurodegeneration.** There is growing evidence in the literature that defects in DNA repair and the consequent accumulation of DNA lesions play an important role in the molecular pathophysiology of multiple neurodegenerative processes. Our goal is to analyze the nuclear processing of DNA damage in normal, ganglionic and cerebral cortex neurons irradiated with X-rays (4 Gy) to induce DNA double-strand breaks. In this model we have observed that most of the neuronal DNA breaks are repaired in the first 24 hours, but there are persistent foci of unrepairs DNA that remain for months in a specific nuclear compartment. We have characterized the structural, molecular and spatial organization of this nuclear compartment as well as its transcriptional repression (Fig. 3). In addition we are characterizing with ChIP-seq techniques DNA sequences enriched in the “persistent foci” of cortical neurons. We have identified 17 sequences associated with genes essential for neuronal homeostasis whose dysfunction is related to pictures of human neuropathology. This line opens a new horizon that should allow to identify neural genes very vulnerable to DNA damage or difficult to repair, whose accumulation of lesions may be involved in neurodegenerative diseases

## O Headache Clinic and Genetics

**Associated group**

## O Research lines

### 1. Genetics of migraines.

The group has maintained its epidemiological-clinical and basic research activity (mainly in genetic association studies) in the field of cephalgias. Within this first aspect, we should highlight the demonstration of the dose-dependent association between migraines and tobacco, and studies focusing on proving the usefulness of new neuromodulators (topiramate and zonisamide) in the treatment of refractory chronic migraines. In the field of genetics, the epistatic interaction of genes related to oestrogen metabolism in migraines (oestrogen receptor ESR2) has been described in 594 subjects grouped in 132 families, confirming

the existence of a genetic factor in the pathogenesis of migraines as related to sex hormones; we further researched the association of genes of the folate metabolic pathway and migraines, confirming the association of migraines with aura and high homocysteine levels. We have recently demonstrated that there is significant endothelial activation in migraine sufferers and that this activation is more pronounced in chronic migraines. Furthermore, we demonstrated that there are variants of certain subunits of GABA associated with migraines in general.

### 2. Clinical and Genetic Research in Multiple Sclerosis.

- HLA haplotype study regarding the origin within the region. Influence of HLA on multiple sclerosis.
- Study of vascular damage associated with Multiple Sclerosis by analysing circulating endothelial cells: the

correlation of endothelial activation with the severity and stage of the disease.

▶ **Figure 1.** Picture taken from the paper by Berciano et al (JNNP 2016; 87: 563-5. Epub 2015 May 13) showing electrophysiological and imaging findings in a patient with the paraparetic and axonal form of GBS. (A) Tibial nerve motor conduction velocity (MCV) study on day 4 after onset showing normal compound muscle action potential (CMAP) morphology, both on distal (ankle to abductor hallucis [AH] muscle) and proximal stimulation (popliteal fossa [PF] to AH); proximal CMAP amplitude is 14.4 mV, and distal CMAP amplitude is 18.9 mV (normal, = 3); MCV is 47 m/s (normal, = 41). (B) On day 12, note severe CMAP amplitude reduction to 1.7 mV, both on distal and proximal stimulation. Comparatively with the previous study, at this stage there was a mild slowing of MCV (passing from 47 m/s to 39.4 m/s) and prolongation of F-wave latency (55.5 ms; normal, = 55), which seems to be proportional to the observed CMAP reduction. Post contrast sagittal (C) and coronal (D) T1-weighted, fat-saturation MR images of the lower thoracic and lumbosacral spine, performed on day 4, showing diffusely thickened cauda equina (arrowheads), which in the axial image (L1 level) selectively involves the anterior roots (E, arrows); CM indicates conus medullaris. (F) Sagittal sonogram of the right ventral rami of C6-C7 cervical nerves (callipers) performed on day 3; note their characteristic homogeneous hypoechoic texture with partial loss of the surrounding perineural hyperechoic rims. (G) Short-axis sonogram the right ventral ramus of the C7 spinal nerve showing the cross sectional area (dotted green tracing) measuring 27.47 mm² (control, 12.29 ± 5.3 mm²). Note blurred margins and the absence of the physiologic hyperechoic rim. Asterisks indicate the posterior tubercle of the seventh transverse vertebral process

## Research lines

### 1- Brain Neuroimaging in Non Affective Psychosis (NAP).

**Responsibles:** R. ROIZ SANTIÁÑEZ Y D. TORDESILLAS GUTIÉRREZ.

The techniques of brain imaging, such as magnetic resonance imaging (MRI), allow exploring the presence of structural alterations from the first clinical phases of the disease (neurodevelopmental anomalies) and also study the onset of morphological changes during the course of the disease (neurodegeneration processes). Our work in this area aims to:

- a. To Compare the volume of gray and white matter in the cortex between patients and controls
- b. To Determine the existence of differences in volume of the basal ganglia between patients and controls
- c. A longitudinal study to detect structural changes over time in people with schizophrenia, and
- d. To study the relationship between variables related to brain structure and other clinical and / or genetic variables.

At present, we are developing research by DTI to explore alterations in the integrity of white matter tracts. Another line of recent research is the development of spectroscopy techniques to assess neuronal processes genesis.

### 2- Genomic of non-affective psychosis.

**Responsible:** Dr. B. CRESPO-FACORRO

In this field, our group has focused its work on two main lines of

activity. Firstly, in the field of Pharmacogenetics, we work on the study of single nucleotide polymorphisms (SNPs) of candidate genes, specifically the genes involved in dopaminergic neurotransmission, serotonergic and candidate genes in linking regions. The aim is to determine whether single nucleotide polymorphisms are associated with psychotic symptomatology, evolution and response to treatment. Also, we work in the field of "imaging genetics" genetic variations associated with brain alterations; In particular, gene expression studies are being carried out to identify genes whose expression is different in people with a first psychotic episode with respect to people not affected by the disease and also in possible differences in gene expression in people with a first Psychotic episode before starting treatment and after one year of pharmacological treatment.

### 3- Epidemiology and Clinical characteristics of non-affective psychosis.

**Responsible:** Dr. B. CRESPO-FACORRO.

The main objectives of this research are:

- a. To investigate the incidence of psychosis in Cantabria and likely related factors.
- b. To identify the profile of symptoms during early phases of the illness.
- c. To describe predictors of outcome.
- d. To advance in the knowledge of biological markers (neuroimage, biochemical, genetic) of Schizophrenia.
- e. To study new short- and long-term therapeutic, pharmacological, psychotherapeutic interventions in the treatment of non-affective psychosis. Special interest in treating metabolic side effects associated with antipsychotic treatments.

### 4- Cognition in non affective psychosis.

**Responsible:** Dr. R. AYESA-ARRIOLA.

The main objectives of this research are:

- a. To evaluate the course of early cognitive function in a sample of first episodes of psychosis individuals.

- b. To examine the relationship between cognitive functions and clinical variables.

- c. To evaluate the influence of cognitive function in the outcome and prognosis of the disease.

### 5. Research and Intervention program focused on the early phases of eating disorders.

**Responsible:** Dr. J.A. GÓMEZ DEL BARRIO.

It consists of a bio-psychosocial line of research and a therapeutic intervention and prevention focused on early phases of eating disorders

- a. Implement an early, multidisciplined and multi-factorial evaluation and intervention protocol for all patients that develop an eating disorder in the area referenced by the Psychiatric Service of Hospital Universitario Marqués de Valdecilla.

- b. Research the early phases of the disease—the psychological, biological, and social components of eating disorders.

- c. Identify and define the risk factors of developing eating disorders, as well as the nature and characteristics of prodromal symptoms and earliest clinical manifestations.

- d. Evaluate the response to interventions, as well as the evolutionary course of the disease, researching bio-psycho-social factors that condition them.

- e. Evaluate the costs derived from treatment, as well as the level of patient and family satisfaction.

### The line of investigation incorporates the following studies:

Intervention study focused on cognitive processes in eating disorders. Responsible: Laura Carral Fernandez y J.A. Gomez del Barrio. This study is framed under an investigation contract Rio Hortega (CM10/0017).

This program focuses on intervention and therapeutic strategies based on new technology for early phases

of eating disorders. Responsibles: Dra. Jana Gonzalez Gomez and Dr. J.A. Gomez del Barrio. This program integrates DETECTA (DEtección TEmpicana en Cantabria de Trasornos Alimentarios) and is framed under a research scholarship, financed by IDIVAL (Lopez Albo WLA 02/11).

#### **6.- Research and Pharmacological Interventions Program for Early Phases of Psychoses in children and adolescents population.**

**Responsibles:** Dr. S. OTERO CUESTA AND Dr. B. PAYÁ GONZÁLEZ.

This is a research program focused on mental health problems of young people. The main areas of interest are:

- a. Clinical trials on effectiveness and safety of new drugs for children and adolescents psychiatric disorders.
- b. Research on Prevention Strategies and Bio-psycho-social Interventions for Early Phases of Psychosis in children and adolescents.

#### **7.- Strategies of assessment in mental health.**

**Responsibles:** Dr. L. GAITÉ PINDADO Y Dr. S. HERRERA CASTANEDO.

- a. To develop and consolidate a network of health professionals interested in investigating mental health services and needs.
- b. To promote the development and dissemination of investigations on instruments of assessment and indicators of outcome (including economic indicators).

#### **8. Molecular basis of non-affective psychosis.**

**Responsibles:** DR. P. SUÁREZ PINILLA Y DR. B CRESPO FACORRO.

The range of clinical features shows that schizophrenia affects multiple brain circuits, and also peripheral pathways. Recently, we have been developing the research in this field through the study of serum and PBMCs (peripheral blood mononuclear cells). Our work in this area aims to:

- a. Detect blood biomarkers

and altered cellular signaling pathways leading to diagnose patients with a first episode of psychosis from healthy controls, combined with clinical practice.

- b. Determine peripheral differences between patients with an episode of non-affective psychosis and healthy controls, from the onset and over time.
- c. Conduct a longitudinal study of the change in biomarkers over time in people with schizophrenia.
- d. Study the relationship between changes in peripheral molecules and correlate with longitudinal severity scores.
- e. Detect biomarkers to predict treatment response.

#### **9- Classification and assessment of disability in mental health.**

**Responsibles:** Dr. S. HERRERA CASTANEDO Y Dr. L. GAITE PINDADO.

Since 1993, our research group has been involved in the development, publication and dissemination of the International classification of Functionality (ICF) and related instruments of assessment (i.e., World Health Organization Disability Assessment Schedule 11 (WHO-DAS 11)).

In addition, in 2011, the Project for the development of the Spanish version of the International Classification of Functioning, Disability and Health- Children and Youth Version of WHO, has been completed with its final publication and the beginning of the dissemination of the same.

## Research lines

### 1. Predictive markers and diagnostics in solid tumors based on techniques advanced molecular:

**molecular:** Our concern continues to be to establish the bridge between basic and clinical research by applying new technologies that help to make therapeutic decisions. Our work focuses on obtaining new markers that may be susceptible to their use in diagnosis and as predictive markers of response to drugs of different neoplasms (MAMACAN and TERPERAN projects based on epithelial-mesenchymal transition molecules such as Collagen Xlalfa1 or CCR9).

### 2. Incorporation of the technology of massive sequencing (Next Generation Sequencing):

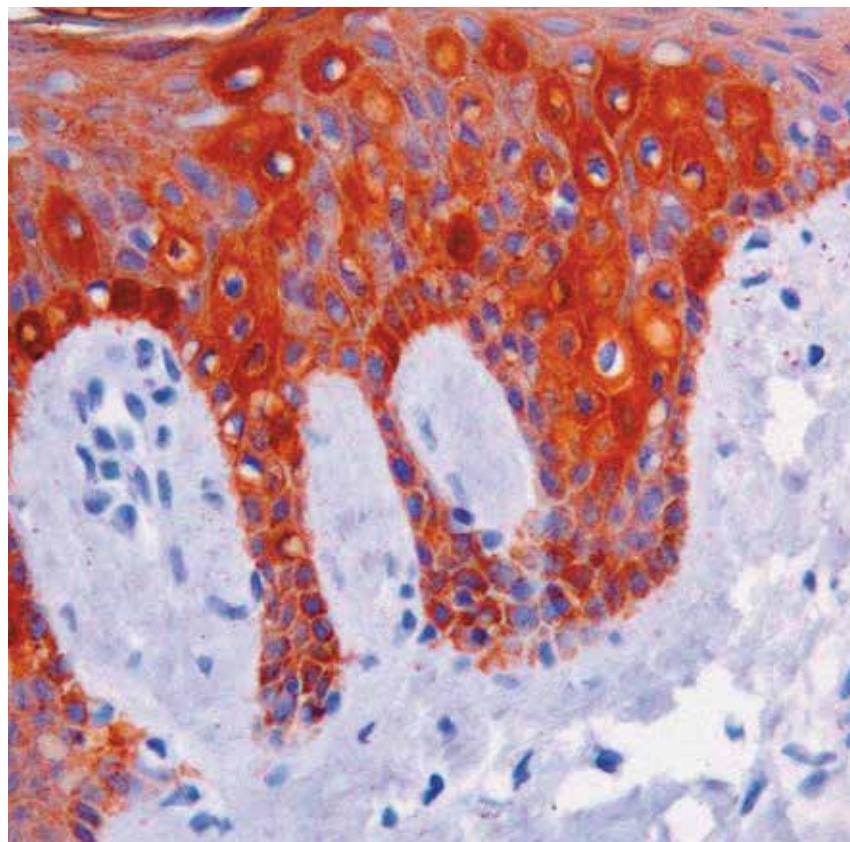

The task of diagnosing neoplastic pathology goes from making determinations on a single molecule to panels of genes with repercussions on the therapy to be applied. We have incorporated to the armamentarium of the group the two most powerful technologies at present in this sense as it is that of Illumina and that of ThermoFisher with which besides giving service to the hospital routine we provide collaborations to other units in research projects.

### 3. We incorporated the diagnosis of hereditary cancer

associated with mutations in BRCA1 and 2 with new technologies based on massive sequencing, decreasing the number of extrahospitalary referrals and the waiting time of the patients of the hereditary cancer unit of the Oncology Service.

### 4. Application of the results obtained and implementation in the clinical care routine.

The results of basic research take a

long time until they can be used in practice. Our mission is to speed up the use of biomarkers that have already proven their usefulness in assistance. Thus, we have already incorporated several of the most prevalent tumors such as lung cancer (mutations in EGFR, ALK and ROS1), breast cancer (Her2neu overexpression), colon cancer (mutations in KRAS, NRAS and BRAF) and brain tumors ( allelic losses of 1p and 19q regions and methylation of the MGMT promoter), malignant melanoma (mutations in the BRAF oncogene) and other tumor types where there are treatments that improve the quality of life and survival of patients.

### 5. Development of Liquid Biopsy:

The monitoring of patients with cancer is essential due to the existence of new treatments and the development of resistance to them. It is necessary to detect these resistances in the earliest possible way. We have implemented BEAMING technology to diagnose mutations in colon cancer in free

DNA in plasma with a sensitivity of 0.01% allelic frequency. We also have other technologies for diagnosis in free DNA in plasma for lung cancer, especially aimed at detecting the resistance mutation T790M.

### 6. Development of Immunotherapy in cancer.

Immunotherapy is one of the most promising fields in new cancer therapies. The use of the so-called "companion tests" are mandatory according to the regulatory agencies for the prescription. We have developed all the markers associated with specific anti PD1 and anti PD-L1 therapies. For this, we are involved in the clinical establishment and in new models of anti PD-L1 antibodies SP142, SP263, 22C3 and 28-8. The availability of all antibodies allows the participation in new clinical trials in new tumor models.

### 7. We actively collaborate with groups from Cantabria, Spain and international in several lines

**of work.** With the University of Cantabria with active projects in relation to Legal Medicine (utility of DNA extraction methods in old samples) and the IBBTEC in Genómica (Dr Ignacio Varela with several projects in execution using massive sequencing procedures). With Dr. Carmen Álvarez from IDIVAL in the project for the development of nanoparticle-based vaccines against melanoma. The collaboration with national research groups is mainly with the CIMA of the University of Navarra in its line of oncology led by Professor Luis Montuenga in the field of lung cancer and with the University of Oviedo and various hospitals of the national network in the role of the epithelium-mesenchyme transition in breast cancer. We receive rotating professionals from different hospitals in the national network to deepen their teaching. The collaboration extends to European countries as well as to the group of Dr Julian Downward of the London Research Institute investigating factors of resistance to drugs that inhibit tyrosine kinase activity in lung cancer. We also collaborated with MD Anderson Hospital in a neuroendocrine tumor evaluation project and its new classification (Dr. Cesar Moran)

## O Research lines

We are interested in the development of the vertebrate limb using avian and mouse embryos as experimental models. The aim of our research

is to uncover molecular signals which regulate the differentiation of skeletal progenitors and also to provide information about limb morphogenesis. Genes identified by different molecular strategies are functionally analyzed through gain-of- and loss-of-function experiments. Gain-of-function experiments are performed through the overexpression of the selected genes employing viral infections or plasmid electroporation. Loss-of-function experiments are made with short hairpin RNAi or CRISPR-Cas9 approaches. Our major research field is the formation of the digits. During

this process mesodermal progenitors of the embryonic limb bud follow two alternative fates: in the future digit regions, mesodermal cells aggregate and differentiate into cartilage, joints and fibrous tissues such as tendons or ligaments; in the interdigital regions, cells do not condense and instead undergo massive cell death. The goal of these studies is to obtain information of relevance in regenerative medicine to direct the differentiation of stem cells into skeletal tissues and to provide basic information about the mechanisms accounting for programmed cell death.

## Research lines

Epithelia are the tissues most frequently affected by cancer. Among them, squamous cell carcinoma (SCC) is the second most common cancer and one of the leading causes of cancer death (Ferlay et al., 2010; <http://www.wcrf.org/>; <https://www.cancer.gov/>; <http://www.cancer.org/>; <https://www.cancerresearchuk.org/>). SCC typically appears in the

stratified epithelia of the skin, oral cavity, pharynx, larynx, esophagus, cervix, but is also common in some simple epithelia such as the lung. It constitutes 20% of epithelial cancer in the skin, 90% in the head and neck, 20-80% in the esophagus, or 25-30% in the lung. It is usually aggressive and has a poor prognosis and treatment, except in the case of the skin where it is usually detected early and eliminated by surgery. Even so, in the skin, SCC metastasizes in 4-5% of cases (Karia et al., 2013).

Only the head and neck SCC (HNSCC in English) causes around 200,000 deaths per year in the world (Ferlay et al., 2010). In Spain, about 12,000 cases are diagnosed each year (SEOM, 2014).

There is growing evidence that epidermoid epithelia could have a common regulation, and therefore common alterations would give rise to epidermoid carcinomas. These epithelia are continuously exposed to the action of mutagens such as ultraviolet light from the sun, alcohol or tobacco. For these reasons they need powerful cellular and molecular mechanisms.

These mechanisms go through a correct control of Stem Cells and homeostasis. The main objective of our group is the investigation of these mechanisms and their alteration in hyperproliferative problems, fundamentally those that lead to cancer. We use and develop technologies *in vitro*, *in situ* and *in vivo* to study the different

tissues and squamous carcinomas. We are currently studying common regulatory mechanisms in melanocytes. We seek to apply the knowledge generated through the reciprocal transfer between the laboratory (molecular mechanisms of the cell cycle), the industry (exploitation of the results) and the clinic (obtaining biopsies, characterization, monitoring, new diagnoses or therapies).

The main lines currently active are:

- Mechanisms of homeostasis of the epidermis and other epidermoid epithelia against genetic damage.
- Mechanisms of control of mitosis and epidermoid and melanocytic differentiation.
- Alterations of the control mitosis-differentiation in squamous cancer.
- In vitro applications for personalized medicine in: Stem cells. Cancer. Rare, hereditary diseases or developmental syndromes. Through the culture of primary cells of skin and mucosa (keratinocytes, melanocytes, fibroblasts).

diffuse large cell lymphoma B from the national cooperative group GELTAMO (Spanish Lymphomas Group and Transplant Bone marrow, GELBRCAP21 (No. EudraCT: 2012-005138-12), GEL-RCOMP 2013 (No. EudraCT: 2013-001065-17), LR-ESHAP (No. EudraCT: 2010-018463-41), IBDCL (No. EudraCT: 2015-005390-21) This project has funding from national funds (MINECO, PI16 / 1397)

### **Identification of genetic alterations involved in the pathogenesis of large cell B-cell lymphoma and its progression.**

Diffuse large-cell lymphoma B (LBDG) is the most common form of non-Hodgkin's lymphoma in our country and accounts for 80% of aggressive lymphomas, with an upward-trend incidence that represents about 93,000 new cases a year in Europe. (GLOBOCAN (IARC) The precise subclassification of the different entities of LBDG has clinical relevance from the point of view of prognosis and selection of therapy since there are a series of phenotypes of aggressive clinical behavior (high grade B lymphoma with "double / triple hit ", ABC subtype LBDG, plasmablastic lymphoma) for which standard immunochemotherapy is ineffective. Recent studies using massive sequencing of the genome and the exome are identifying recurrent genetic alterations in the NFkB, BCR, JAK / STAT pathways, modifying genes of histones and genes related to the immune response, among others. Some of these alterations are associated with specific phenotypes and can be targeted therapy targets.

Recent data from our group (S Montes-Moreno, et al. Modern Pathology 2017) reinforce the relevance of the MYC oncogene in plasmablastic lymphoma and describe, for the first time, somatic mutations in PRDM1 / blimp1 in this type of neoplasm, revealing new molecular mechanisms of the disease (Figure 1B). The recent implementation of NGS-directed sequencing technologies in cases of LBDG is revealing that mutational profiles are associated with specific clinicopathological variants and condition their phenotype. Recent observations from our group confirm

that the application of directed sequencing methods of the exome using NGS allows to trace the clonal evolution of the refractory LBDG and may have an impact on the selection of the optimal therapy (Garcia-Reyero et al., Clonal Evolution in primary diffuse large B cell lymphoma of the Central Nervous System, AIMM, 2018, epub) (Figure 1C).

## ○ Research lines

### 1. Molecular Imaging od Glucose Metabolism in Oncology.

- Imaging Criteria for measuring the Metabolic Response to treatment in Oncology.
- Assessment of the role of 18F-FDG PET/CT on the effect of

biologic therapy in solid tumours.

- Tissue characterization of pulmonary lesions by 18F-FDG PET/CT.
- Assessment of the role of 18F-FDG PET/CT to the nodal staging of lung cancer.

### 2. Molecular Imaging in the study assessment of the mineralization and inflammation of the carotid atheroma plaque.

- To define an acquisition

protocol of 18F-FDG PET/CT to study the carotid plaque metabolism

- To assess the inflammation process of the carotid plaque by 18F-FDG PET/CT
- To assess the calcification process of the carotid plaque by 18FNa PET/CT
- To monitor the response to anti-inflammatory treatment by 18F-FDG PET/CT
- To study the carotid plaque

stability and to identify the vulnerable plaque by molecular imaging techniques

### **3. Assessment and evaluation of the clinical impact of 18F-FNa PET/CT and 18F-FDG PET/CT in the management of atherosclerosis in diabetic patients.**

- To establish an acquisition protocol for 18F-FNa PET/CT and 18F-FDG PET/CT for the study of atherosclerosis in diabetic patients
- To identify uptake patterns in different vascular territories of the body in diabetic patients
- To evaluate the correlation between the arterial uptake of 18F-Fna and cardiovascular risk factor of diabetes.

### **4. Molecular Imaging of the protein b-amyloid in the study of the cognitive impairment and assessment of its clinical impact.**

- Identification of patients with Alzheimer's disease
- To establish an acquisition protocol for b-amyloid imaging using 11C-PIB PET/CT
- To determine the 11C-PIB retention patterns in the brain
- To study the contribution of 11C-PIB PET/CT in the study of cognitive impairment
- To identify the patients with b amyloid deposit in the brain
- To assess the role of 11C-PIB in differential diagnose of dementias
- To evaluate quantitatively the contribution of 11C-PIB

### **5. Molecular Imaging in the early diagnosis and extension of vasculitis.**

- To establish an acquisition protocol for 18F-FDG in patients with suspicion of large vessel vasculitis.
- To determine the biokinetics of FDG in the large vessels was, to establish the optimum time for image acquisition
- To identify the normal uptake patterns in different vascular territories

- To quantify the arterial wall activity in relation to the global vascular activity

- To calculate the standard uptake values ( SUV ) in normal subjects and in patients with arterial wall inflammation

### **6. Research and Development of new molecular imangen radiotracers.**

- To study the application of radiotracers for prostate cancer recurrence
- To assess the role of 11C-methionine in primary hyperparathyroidism
- To evaluate the role of 11C-methionine in the suspicion of brain tumour recurrence
- To carry out the synthesis and clinical and to assess the clinical contribution of 18F-FLT
- To carry out the synthesis and develop.

## ○ Melatonin and Breast Cancer

**Consolidated group**

## ○ Research lines

Our group focuses its research on the actions of melatonin, the main hormone produced in the pineal gland, on the genesis and development of hormone-dependent mammary tumors. *In vivo*, either experimental manipulations that activate the pineal gland or the exogenous administration of melatonin, reduce the incidence and development of spontaneous mammary tumors or chemically-

induced mammary tumors in rodents, while pinealectomy or experimental conditions involving a reduction in melatonin synthesis stimulate mammary carcinogenesis. *In vitro*, melatonin inhibits proliferation and invasiveness of human breast cancer cells. The antitumoral properties of melatonin are based on its ability to interact with estrogen-signaling pathways. Two types of mechanisms have been proposed to explain these oncostatic actions of melatonin: a) downregulation of the circulating levels of gonadal estrogens, and b) direct actions at the tumoral level interfering with the activation of the estrogen receptor, therefore behaving as a SERM (selective estrogen receptor modulator). In last

years, research activity in our group focuses on the description of a third mechanism by which melatonin may reduce the development of estrogen-dependent tumors, based on the ability of melatonin to modulate estrogen synthesis in both tumoral and peritumoral surrounding tissues, behaving as a SEEM (selective estrogen enzyme modulator)

The research that we are currently developing centers on:

- a) To study, on the one hand, the ability of melatonin to modulate the activity of some enzymes (aromatase, sulfatase, 17 $\beta$ -dehydrogenase, sulfotransferase) involved in the

synthesis of estrogens at tumor level, and, then, to analyze the possible intracellular mediators through which melatonin regulates the activity and expression of these enzymes.

- b)** To study the ability of melatonin to modulate the angiogenesis and to antagonize the effects of estrogens on new blood vessel formation in hormone-dependent breast cancer.
- c)** To study the ability of melatonin to increase the sensibility of human breast cancer cells to the action of radiotherapy in base to its actions modulating the enzymes that participate in the synthesis of estrogens and its antiestrogenic actions.
- d)** To study the protective effects of melatonin on the molecular changes induced by chemotherapy used in the treatment of breast cancer.
- e)** To study the protective effects of chronic treatment with melatonin on cognitive and neuromorphological deficits in Ts65Dn mouse, a model of Down syndrome.

## ○ Research lines

The Nanomedicine group was created in 2014 after being positively accredited by the External Scientific Committee of the ISCiii-IDIVAL Institute. The group is

composed by scientists specialised in the fields of medicine, molecular/cellular biology, biotechnology, pharmacy, physics and chemistry at the IDIVAL institute, but we have several close external collaborators, mostly clinicians. The group has two functional units, the physicochemical subgroup, that self-finances (Directed by Rafael Valiente) that is specialised in the fields of spectroscopy, nanomaterial synthesis and characterisation, and the biomedical group, located at the

Faculty of Medicine. Both groups belong to the IDIVAL-Nanomedicine group. The biomedical group directed by ML Fanarraga has so far participated in two consecutive AES projects dedicated to the use of carbon nanotubes in cancer PI13/01074 and PI16/00496. The mission of our research is to understand the interactions between nanomaterials and proteins/cells/tissues -at the *in vitro* and *in vivo* levels to obtain products with a "high added value" for

biomedicine and biotechnology, and to develop therapeutic solutions for diseases where traditional therapies are inefficient.

Thus far, major contributions of the Fanarraga group have been achieved in the field of nanotechnology against cancer. In 2012, we first demonstrated the intrinsic anti-tumoral properties of CNT. We have demonstrated how CNTs interact with cell membrane receptors, are phagocytosed finally invading the cellular cytoplasm where they biomimetically interact with the microtubules, assembling biosynthetic tubulin polymers (*ACS Nano* 2012;6:6614). This interaction triggers important cellular biomechanical changes in highly proliferate cells interfering with microtubule dynamics resulting in "taxol-like" effects. We have pioneer the studies demonstrating how this "intrinsic" property of CNTs leads to anti-proliferative, anti-migratory and cytotoxic effects in different cancer cells *in vitro*, and significant anti-tumoral effects *in vivo*, even in solid melanoma models produced with taxol-resistant cells (*Adv Healthc Mater.* 2014;3:424; *Nanomed* 2014;9:1581-8; *Curr Pharm Des.* 2015;21:1920; *Adv Healthc Mater.* 2015;4:1640; *Adv Healthc Mater.* 2016;5:1080; *Nanoscale*. 2016; 8;10963; *Biomaterials*. 2017;114:62; *Int J Nanomed* 2017;12:6317; etc.). Recently we have developed a method to bio-compatibilize CNTs, improving *in vivo* degradation by the local tumour associated macrophages (*Nanoscale* 2018; 10:11013). Our recent results support a role of CNTs as active-by-design nanocarriers significantly boosting the effect of classical chemotherapy, preventing resistance (*Oncotarget*, 2019 *in press*). Finally, in the context of our las project we

have designed interesting CNTs coated nanomaterials to control the subcellular destiny of the nanocarrier systems (*Angew.Chem. Int. Ed.* 2017;56:13736).

## Research lines

**1. Study of the invasive capacity of glioblastoma stem cells (GSCs).** The capacity of glioblastoma (GBM) cells to invade the surrounding parenchyma is one of the main problems for an efficient therapeutic strategy because it makes complete

resection nearly impossible. Among the GBM cells there is a small population (<5%) with the capacity to regenerate the tumor and with features similar to those found in adult stem cells. They are the so-called cancer stem cells. If the current hypothesis is right, this cell population is the proper target for new therapeutic strategies. We aim to identify molecular mediators of migration and invasion of GSCs.

**2. Development of in vitro models to study the response of GBM cells to chemotherapy in physiological environments.**

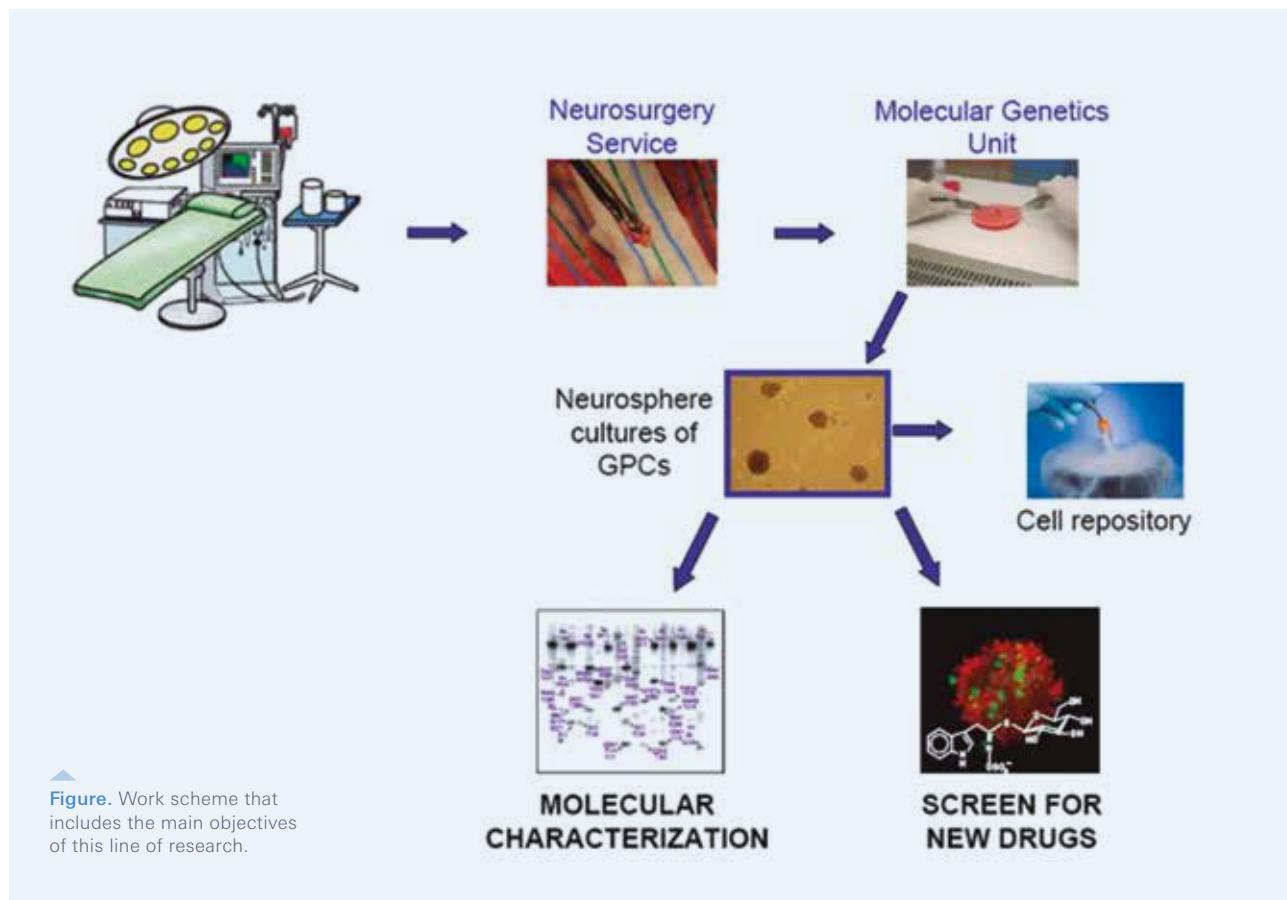

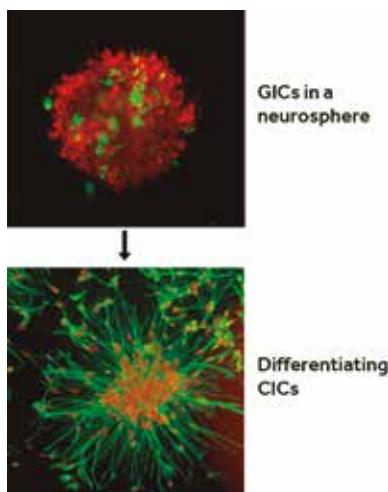

Most in vitro studies to measure the cellular response to chemotherapy use cell cultures on 2D surfaces. There are many evidences about the role of the biophysic features of the microenvironment in cellular processes studied in vitro (differentiation, migration, survival). In order to optimize more physiological in vitro models of chemotherapy response, closer to in vivo models, we are studying the behaviour of GBM cells (GSCs and tumor parenchymal

cells) following exposure to chemotherapeutic agents in different microenvironments.

**3. Screening of novel compounds addressed to cancer stem cells by using computational and biologic platforms.** Currently, there are different undergoing clinical trials addressed to kill cancer stem cells. However, a lack of proof of concept still persist, which means that there are no drugs approved for this indication. This novel therapeutic area is open to different experimental approaches including combinatorial chemistry, re - profiling and virtual screening, among others. In collaboration with a start-up from the Bioinformatics Unit at Centro de Biología Molecular Severo Ochoa (CSIC), we have established a platform that joints computational screening of 5 million compounds with the validation of candidates in biological models in vitro and in vivo. Target cells are cancer stem cells from GBM and colon cancer.

#### 4. Development of a biosensor device to detect, quantify and isolate circulating tumor cells from cancer patients: SENTIR Project.

This device, based on optical principles and a microfluidic system, is being developed jointly by IDIVAL (group of cell signaling and therapeutic targets and group of Medical Oncology), University of Cantabria (optics group of the Faculty of Sciences), the center Technological group IK4-TEKNIKER (micro-manufacturing group) and the Cantabrian biotech company CELLBIOCAN. Currently, the assembly of an experimental prototype is being finalized, which will be optimized until it reaches a final product with which a clinical validation will be performed with samples from cancer patients. The objective is to quantify blood CTCs as a predictor, and to isolate them for further genetic analysis, which will allow a personalized selection of the treatment.

## C Clinical Trials Unit, Medical Oncology and Palliative Medicine

**Associated group**

## O Research lines

Clinical trials in solid tumors  
Nowadays our Unit starts around thirty new clinical trials every year, many of them in Phases II and III, becoming a leading center in Spain

on development of some lines of new drugs, particularly anti-EGFR therapies, anti-VGF and anti-PD-L1.

This line of research is well established, it is the basis of the group's publications and has an intense activity.

## Projects

### Clinical Trials

**1.** Marta Francisca López-Brea Piquerias. **Estudio en fase 3, aleatorizado, con doble enmascaramiento, controlado, con placebo, para el acetato de abiraterona (CB7630) más prednisona en pacientes asintomáticos o con síntomas leves que padecen cáncer de próstata metastásico resistente a la castración, versión 1.0 del 11/02/2009.** HIP/CI v 1.1 del 20/07/2009.. COU-AA-302. JANSSEN-CILAG, S.A..

**2.** José Manuel López Vega. **Estudio fase III aleatorizado, abierto de lapatinib, trastuzumab, la administración secuencial de ambos y la administración combinada de ambos como tratamiento adyuvante en pacientes con cáncer de mama HER2/ErbB2 positivo.** EGF106708/CLAP016B2301. GLAXOSMITHKLINE, S.A..

**3.** Marta Francisca López-Brea Piquerias. **Estudio en fase 3, aleatorizado y abierto, de la eficacia y seguridad de PF-02341066 frente a quimioterapia estandar (pemetrexed o docetaxel) en pacientes con cancer de pulmon no microcítico (NSCLC) avanzado que presentan una translocacion o inversion en el locus del gen de la quinasa de linfoma anaplasico, versión 3 de agosto de 2009..** A8081007. PFIZER LIMITED.

**4.** Marta Francisca López-Brea Piquerias. **Estudio en fase 2, abierto,**

con un solo grupo de tratamiento, de la eficacia y seguridad de PF02341066 en pacientes con cáncer de pulmón no microcítico (NSCLC) avanzado que presentan una translocación o inversión en el locus del gen de la quinasa de linfoma anaplásico, versión Enmienda 2 de 27 de agosto de 2009,. A8081005. PFIZER LIMITED.

**5.** Fernando Rivera Herrero. **Ensayo fase IIb randomizado para evaluar la eficacia de Gemcitabina-Erlotinib vs Gemcitabina-Erlotinib-Capécitabina en pacientes con cáncer de páncreas metastásico, protocolo vs final de 2 de septiembre de 2010.** TTD-10-01. GRUPO DE TRATAMIENTO DE LOS TUMORES DIGESTIVOS GRUPO TTD.

**6.** Fernando Rivera Herrero. **Estudio SCOT - Tratamiento oncológico de corta duración - Estudio de Quimioterapia Adyuvante en Cáncer Colorectal.** SCOT. FUNDACIO INSTITUT DE RECERCA DEL HOSPITAL VALL D'HEBRON.

**7.** Carlos López López. **Estudio fase II aleatorizado de doble ciego de la combinaci6n de Sandostatina LAR con Axitinib vs Sandostatina LAR con placebo en pacientes con carcinomas neuroendocrinos avanzados y bien diferenciados de origen no pancreatico (Carcinoides), protocolo Vs. 1 de 3 de mayo de 2011, HIP y CI Vs 3 de mayo de 2011.** AXI-IIG-02. GRUPO ESPAÑOL DE TUMORES NEUROENDOCRINOS, S.A. GETNE.

**8.** Fernando Rivera Herrero. **Estudio fase II con axitinib como tratamiento de mantenimiento en pacientes con carcinoma colorectal metastásico.** TTD-11-01/AXI-IIG-01. GRUPO DE TRATAMIENTO DE LOS TUMORES DIGESTIVOS GRUPO TTD.

**9.** Ana de Juan Ferré. **Ensayo fase I/II multicéntrico y prospectivo de nilotinib y adriamicina como tratamiento neoadyuvante en liposarcomas y leiomiosarcomas retroperitoneo.** EC10-150 RETRONEO. MARTÍN BROTO, JAVIER.

**10.** José Manuel López Vega. **Estudio multicéntrico, doble ciego, randomizado, controlado con placebo, para comparar quimioterapia más trastuzumab**

y placebo con quimioterapia más trastuzumab y pertuzumab, como tratamiento adyuvante en pacientes con cáncer de mama primario Her2-positivo operable. BIG 4-11/ BO25126/TOC4939G. F. HOFFMANN-LA ROCHE LTD.

**11.** Marta Francisca López-Brea Piqueras. **Ensayo clínico fase IIb, abierto, aleatorizado de afatinib versus gefitinib en primera línea de tratamiento en pacientes con denocarcinoma de pulmón avanzado con mutación del EGFR.** 1200.123. BOEHRINGER INGELHEIM ESPAÑA, S.A..

**12.** José Manuel López Vega. **Ensayo fase II multicéntrico, abierto, de dos cohortes para determinar la eficacia y seguridad de pertuzumab en combinación con trastuzumab y vinorelbine en pacientes de primera línea de cáncer de mama avanzado (localmente avanzado o metastásico) HER-2 positivo.** MO27782. F. HOFFMANN-LA ROCHE LTD.

**13.** José Manuel López Vega. **Estudio fase III prospectivo, no randomizado y abierto de dos cohortes, multicéntrico y multinacional para asegurar la la seguridad de administración asistida o autoadministración de trastuzumab subcutáneo como tratamiento adyuvante en pacientes con carcinoma de mama precoz operable HER-2+.** MO28048. ROCHE FARMA, S.A.U..

**14.** Fernando Rivera Herrero. **Ensayo clínico fase III aleatorizado, para evaluar la eficacia de FOLFOX + bevacizumab versus FOLFOXIRI + bevacizumab como tratamiento de primera línea de pacientes con cáncer colorectal metastásico no tratado previamente con tres o más células tumorales circulantes.** TTD-12-01. GRUPO DE TRATAMIENTO DE LOS TUMORES DIGESTIVOS GRUPO TTD.

**15.** Fernando Rivera Herrero. **Ensayo clínico fase II aleatorizado para explorar la influencia del estado de BRAF y PI3K, en la eficacia de FOLFIRI + Bevacizumab ó Cetuximab, como tratamiento de primera línea de pacientes con cáncer colorectal metastásico con KRAS nativo y menos de tres**

células tumorales circulantes.

TTD-12-02. GRUPO DE TRATAMIENTO DE LOS TUMORES DIGESTIVOS GRUPO TTD.

**16.** Fernando Rivera Herrero. **Estudio en fase II, multicéntrico, aleatorizado, doble ciego y controlado con placebo para evaluar la eficacia y la seguridad de onartuzumab (MetMab) en combinación con 5-fluorouracilo, ácido folínico y oxaliplatinio (mFolfox6) en pacientes con cáncer gastroesofágico positivo para Met, negativo para Her2, metastásico.** YO28322. F. HOFFMANN-LA ROCHE LTD.

**17.** Fernando Rivera Herrero. **Ensayo clínico abierto, multicéntrico, de un único brazo, para evaluar la seguridad y Calidad de Vida Relacionada con la Salud de afilibercept en pacientes con cáncer colorrectal metastásico (CCRM) previamente tratados con un régimen contenido oxaliplatinio.** AFLIBC06097. SANOFI AVENTIS, S.A..

**18.** Fernando Rivera Herrero. **Ensayo clínico abierto, aleatorizado, de fase III, de cisplatino y 5-fluorouracilo con o sin panitumumab, en pacientes con carcinoma esofágico de células escamosas (ESCC) avanzado o metastásico, no resecable.** AIO-STO-0309. AIO-STUDIEN-GGMBH.

**19.** Ana de Juan Ferré. **Ensayo clínico fase II aleatorizado, abierto y multicéntrico, para determinar la toxicidad y eficacia de quimioterapia pre-quirúrgica con o sin Bevacizumab en pacientes con Cáncer de Ovario Avanzado.** GEICO-1205. GRUPO ESPAÑOL DE INVESTIGACION EN CANCER DE OVARIO GEICO.

**20.** Almudena García Castaño. **COMBI-AD: Estudio de fase III, aleatorizado y doble ciego de dabrafenib (GSK2118436) en COMBlnación con trametinib (GSK1120212) frente a dos placebos en el tratamiento ADyuvante del melanoma de alto riesgo con la mutación BRAF V600 tras resección quirúrgica.** BRF115532. GLAXOSMITHKLINE, S.A..

**21.** Carlos López López. **Estudio abierto, controlado, aleatorizado y multicéntrico que compara la eficacia y la seguridad de infusions intravenosas lentas repetidas de 2 dosis de doxorrubicina Transdrug (DT) (20 mg/m<sup>2</sup> o 30 mg/m<sup>2</sup>) con las del mejor tratamiento de referencia (MTR) en pacientes con carcinoma hepatocelular avanzado (CHC) tras fracaso o intolerancia a sorafenib. Estudio ReLive.**  
 BA2011/03/04. ONXEO, S.A..

**22.** Fernando Rivera Herrero. **Estudio de fase 3, multicéntrico, abierto y aleatorizado de nab-paclitaxel más gemcitabina en comparación con gemcitabina en monoterapia como tratamiento adyuvante en sujetos con adenocarcinoma pancreático extirpado quirúrgicamente.**  
 ABI-007-PANC-003. CELGENE CORPORATION.

**23.** Fernando Rivera Herrero. **Ensayo IMPALA: Evaluación de un tratamiento de mantenimiento inmunomodulador en pacientes con cáncer colorrectal metastásico con reducción del tumor durante el tratamiento de inducción. Un ensayo en fase III.** MGN1703-C06. MOLOGEN AG.

**24.** Marta Francisca López-Brea Piqueras. **Ensayo clínico de fase III aleatorizado de comparación de pembrolizumab (MK-3475) frente a paclitaxel, docetaxel o vinflunina en pacientes con cáncer urotelial metastásico recidivante o progresivo.** MK3475-045. MERCK, SHARP&DOHME CORP. (MERCK).

**25.** José Manuel López Vega. **Estudio multicéntrico, abierto, de un único brazo de extensión de Pertuzumab administrado en monoterapia o en combinación con otros tratamientos antitumorales en pacientes previamente incluidos en estudios de Pertuzumab esponsorizados por Hoffmann-La Roche.** MO29406. F. HOFFMANN-LA ROCHE LTD.

**26.** Carlos López López. **Estudio fase II para evaluar la actividad y seguridad de TH-302 en combinación con sunitinib para pacientes con tumores neuroendocrinos pancreáticos (pNET) bien o moderadamente diferenciados metastásicos no**

**tratados previamente.** GETNE-1408. GRUPO ESPAÑOL DE TUMORES NEUROENDOCRINOS, S.A. GETNE.

**27.** Almudena García Castaño. **Estudio de extensión (transferencia) abierto, de Vemurafenib en pacientes con neoplasia maligna con la mutación BRAFV600 incluidos previamente en un protocolo anterior de Vemurafenib.** GO28399. F. HOFFMANN-LA ROCHE LTD.

**28.** Marta Francisca López-Brea Piqueras. **Ensayo clínico abierto y multicéntrico de nivolumab (BMS-936558) en monoterapia en sujetos con cáncer de pulmón no microcítico (CPNM) epidermoide avanzado o metastásico que han recibido al menos una línea de tratamiento sistémico previa para el tratamiento del CPNM epidermoide en estadio IIIb/IV.**  
 CA209-171. BRISTOL-MYERS SQUIBB INTERNATIONAL CORPORATION (BMSIC).

**29.** Fernando Rivera Herrero. **Ensayo clínico de fase III, aleatorizado y abierto de pembrolizumab (MK 3475) frente a paclitaxel en sujetos con adenocarcinoma gástrico o de la unión gastroesofágica avanzado que han presentado progresión después del tratamiento de primera línea con platino y fluoropirimidinas.** MK3475-061. MERCK, SHARP&DOHME CORP. (MERCK).

**30.** Marta Francisca López-Brea Piqueras. **Estudio Fase III, abierto, aleatorizado, de MPDL3280A (Anticuerpo ANTI-PD-L1) en combinación con Carboplatino + Paclitaxel con o sin Bevacizumab comparado con Carboplatino + Paclitaxel + Bevacizumab en pacientes con cáncer de Pulmón no epidermoide no microcítico en estadio IV que no han recibido quimioterapia previa.** GO29436. F. HOFFMANN-LA ROCHE LTD.

**31.** Marta Francisca López-Brea Piqueras. **Estudio fase III, Abierto, Multicéntrico, Aleatorizado que evalúa la eficacia y seguridad de MPDL3280A (Anticuerpo ANTI PD L1) en combinación con Carboplatino + Paclitaxel o MPDL3280A en combinación con Carboplatino + Nab Paclitaxel comparado con Carboplatino + Nab**

**Paclitaxel en pacientes con cáncer de pulmón no microcítico escamoso estadio IV que no han recibido quimioterapia previa.** GO29437. F. HOFFMANN-LA ROCHE LTD.

**32.** Carlos López López. **Estudio de fase 3, aleatorizado, doble ciego, controlado con placebo, de ramucirumab y las mejores medidas complementarias frente a placebo y las mejores medidas complementarias como tratamiento de segunda línea en pacientes con carcinoma hepatocelular y con la alfafetoproteína (AFP) basal elevada, tras un tratamiento de primera línea con sorafenib.** I4T-MC-JVDE. LILLY, S.A..

**33.** Carlos López López. **Ensayo para evaluar la eficacia de lenvatinib en tumores neuroendocrinos metastásicos (Estudio Talent).**  
 GETNE1509. GRUPO ESPAÑOL DE TUMORES NEUROENDOCRINOS, S.A. GETNE.

**34.** Fernando Rivera Herrero. **Ensayo clínico de fase III, aleatorizado, controlado con tratamiento activo, con enmascaramiento parcial y con detección de biomarcadores, de pembrolizumab en monoterapia y en combinación con cisplatino + 5-fluorouracilo frente a placebo + cisplatino + 5-fluorouracilo como tratamiento de primera línea en sujetos con adenocarcinoma gástrico o de la unión gastroesofágica (UGE) avanzado.** MK3475-062. MERCK, SHARP&DOHME CORP. (MERCK).

**35.** Fernando Rivera Herrero. **Estudio de fase II, aleatorizado, doble ciego controlado con placebo de MM- 141 más nab-paclitaxel y gemcitabina en comparación con nab-paclitaxel y gemcitabina en el tratamiento de primera línea para el cáncer de páncreas metastásico.**  
 MM-141-07-02-02. MERRIMACK PHARMACEUTICALS, INC.

**36.** Fernando Rivera Herrero. **Ensayo aleatorizado de fase 2 en el que se evalúan dosis alternativas de ramucirumab en combinación con paclitaxel como tratamiento de segunda línea en pacientes con adenocarcinoma gástrico o de la unión gastroesofágica, localmente avanzado o metastásico e resecable.** I4T-MC-JVCZ. LILLY, S.A..

**37.** Marta Francisca López-Brea Piqueras. **Estudio en fase III, abierto y aleatorizado para investigar la eficacia y seguridad de atezolizumab (anticuerpo Anti-PD-L1) en comparación con el tratamiento de soporte óptimo después de quimioterapia adyuvante basada en cisplatino en pacientes seleccionados por PD-L1 con cáncer de pulmón no microcítico en estadio IB-III A totalmente resecado.** GO29527. F. HOFFMANN-LA ROCHE LTD.

**38.** Fernando Rivera Herrero. **Estudio en fase II de pembrolizumab (MK 3475) en monoterapia en sujetos tratados previamente por un carcinoma colorrectal con alta inestabilidad de microsatélites o con reparación de errores de apareamiento deficiente, localmente avanzado irrecesable o metastásico (estadio IV) (KEYNOTE 164).** MK-3475-164. MERCK, SHARP&DOHME CORP. (MERCK).

**39.** Fernando Rivera Herrero. **Estudio de fase III de pembrolizumab (MK-3475) frente a quimioterapia en el carcinoma colorrectal en estadio IV con inestabilidad de microsatélites alta (MSI-H) o con defectos en la reparación de los errores de emparejamiento (dMMR) (KEYNOTE-177).** MK3475-177. MERCK, SHARP&DOHME CORP. (MERCK).

**40.** Carlos López López. **Tratamiento de inducción con FOLFOX con o sin Aflibercept seguido de quimio-radioterapia (QT/RT) en adenocarcinoma de recto localmente avanzado de alto riesgo. Ensayo abierto, Fase II, aleatorizado.** GEMCAD-1402. GRUPO ESPAÑOL MULTIDISCIPLINAR EN CÁNCER DIGESTIVO GEMCAD.

**41.** Fernando Rivera Herrero. **Ensayo clínico multicéntrico randomizado, de tratamiento de mantenimiento basado en Biomarcadores para primera línea de cáncer colorrectal metastásico (Modul).** MO29112. ROCHE FARMA, S.A.U..

**42.** Fernando Rivera Herrero. **Estudio en fase 1b/2 del tratamiento combinado con Ibrutinib en tumores**

**gastrointestinales y genitourinarios avanzados seleccionados.** PCYC-1128-CA. SYNEOS HEALTH UK LTD..

**43.** Marta Francisca López-Brea Piqueras. **Estudio abierto y multicéntrico en fase III de brigatinib (AP26113) frente a crizotinib en pacientes con cáncer de pulmón avanzado con ALK positiva.** AP26113-13-301. ARIAD PHARMACEUTICALS, INC..

**44.** Fernando Rivera Herrero. **Estudio aleatorizado fase 2 de comparación de diferentes dosis-pautas de tratamiento de inducción (primer ciclo) de regorafenib en pacientes con cáncer colorrectal metastásico (mCRC).** TTD-16-01. GRUPO DE TRATAMIENTO DE LOS TUMORES DIGESTIVOS GRUPO TTD.

**45.** Fernando Rivera Herrero. **Estudio fase II para evaluar la eficacia de FOLFIRI + afilbercept en pacientes con cáncer colorrectal metastásico tratado previamente con oxaliplatin con o sin polimorfismos de ACE.** TTD-16-02. GRUPO DE TRATAMIENTO DE LOS TUMORES DIGESTIVOS GRUPO TTD.

## O Research lines

### 1. Epidemiology of cancer:

Development of methods for estimating confidence intervals of the population attributable fraction (Stat Med) and its assignation when risk factors are not additive (J Clin Epidemiol). Analysis of competing risks of death using Gompertzian models (Mech Ageing Develop; J Epidemiol Commun Health; Rev Esp Cardiol), Markov chains with conditional independence (Int J Epidemiol) and in lack of independence (J Clin Epidemiol).

Line started in 2009 when entering the MCC-Spain project. There have been recruited 10000 participants between cases (breast, prostate, colorectal, stomach and Chronic lymphocytic leukemia) and controls in the different nodes of the project (Asturias,

**Figura.** ROC Curves for the death outcomes at: (a) 30 days after transplantation, and (b) 90 days after transplantation. Solid lines: logistic regression (area under ROC curve [AUC] is 0.7246 [95% CI 0.6080 to 0.8913] for 30-

day mortality and 0.8900 [95% CI 0.8311 to 0.9488] for 90-day mortality). Dashed lines: artificial neural network (AUC is 0.8806 [95% CI 0.7551 to 1.00] for 30-day mortality and 0.8625 [95% CI 0.7865 to 0.9389] for 90-day mortality)

Cantabria, León, Guipúzcoa, Navarre, Gerona, Barcelona, Valencia, Murcia, Granada, Huelva and Madrid). The Cantabria node is the 4th in number of participants (after Of Madrid, Barcelona and Leon).

Our group has obtained three FIS projects as IP for this project in 2009 (5 Projects coordinated by the Cantabria node), 2012 (4 projects coordinated

by The Madrid node) and 2015 (3 projects coordinated by the Cantabria node). In addition to participating with collaborating researchers in projects of 2011 and 2014 Led by CREAL, the National Center for Epidemiology and the ICO-Belvitge.

MCC-Spain began publishing its results in mid-2015 and at the moment Has published 27 articles, of which the node

of Cantabria has led 3 on Consumption of drugs and breast cancer (BMC Cancer, PlosOne and Breast Cancer Research and Treatment).

With the 2015 project, a turn in the project is initiated to transform the cases into Cohorts for the study of prognostic factors. To this end, the Coordinating committee of MCC-Spain, including from November 2016 to Javier Llorca as a follow-up coordinator.

## **2. Epidemiology of rheumatic diseases:**

Line initiated in 2000 in collaboration with the group of Dr. González-Gay (then, In the Hospital Xeral Calde de Lugo). We have worked on rheumatoid arthritis, arteritis Of giant cells, Schönlein-Henoch's disease, ankylosing spondylitis, Psoriatic arthropathy among others, giving rise to a large number of articles in first Decile / quartile and to the presentation of 7 doctoral theses. At this point, we continue Fundamentally in two sub-lines: cardiovascular risk in diseases Rheumatic and genetic factors that influence this risk.

## **3. Clinical Epidemiology:**

In these years, the line of clinical epidemiology has focused The transplant, especially the lung, giving rise to 18 articles and 5 theses.

## **4. Epidemiological method:**

Our former line of epidemiological method has been refocused towards the Research of new methods to study gene-gene and gene-environment interaction; This includes regression with lasso and ridge penalty, artificial neural networks, and Bayesian networks. This refocus should begin to produce End of 2017

## Research lines

The group currently has three main lines of research: diabetes, smoking and emergencies.

In the line of diabetes we are participating in the study PREDAPS, which is a multicenter national follow-up study of two cohorts of patients (subjects with prediabetes criteria and healthy controls) started in 2012, consists of 1184 prediabetics and 838 controls. Four articles have been

published and are being drafted and are about to be submitted for evaluation. It has also collaborated in a genetic study related to the risk of developing diabetes in which three Autonomous Communities participate at the national level (Madrid, Catalonia and Cantabria) within CIBERDEM (CIBER of Diabetes and Associated Metabolic Diseases). In addition one of the areas of interest of the group is diabetic retinopathy, in this sense has been finalized in 2016, an epidemiological study in Cantabria to update the prevalence of this complication. The possible contribution of vitamin D deficiency as a risk factor for diabetic retinopathy and the possible use of certain miRNAs as predictors of

diabetic retinopathy are also being investigated.

**Smoking.** At present there is an active follow-up project, which includes patients who participated in the groups of tobacco cessation in primary care from 2006 to the present, in the health center of Puertochoico; In these have participated something more than 520 people. The aim is to establish long-term effectiveness, ie beyond the 12-month period commonly used as an international benchmark for evaluating the effectiveness of interventions. This would be a novel contribution, and may serve to establish the need to mark an assessment at three or five years as a standard.

In the **urgency and emergency area**, a cohort study is used to establish the prognostic capacity of ultrasensitive troponin T for early and late mortality in community acquired pneumonias, in which the emergency professionals of the hospitals of Laredo And Valdecilla. The aim is to evaluate the predictive capacity of the aminoterminal fragment of the Cerebral Natriuretic Pro-peptide in order to predict mortality in pneumonias. The objective of this study was to use the same protocol for the collection of variables and follow-up of patients. Acquired in the community, and which provided positive results. In this study we explored the utility of troponin T results, not significant because of the small sample number available for this marker, but with a better diagnostic yield curve than that of the main objective (NT Pro-BNP).

In addition we propose with the incorporation of two nurses, one of them matron, to initiate a new line in the area of breastfeeding materna, one of the priority lines of the Health Plan of Cantabria. We have experience in this research topic, in particular we obtained funding in a competitive call in 2008, which served to verify the proper functioning of the methodology of collection and monitoring of the cohort. At the moment we are finishing the analysis of the final survey of 2009 after the seguimiento that ended in 2016.

## ○ Health Law and Bioethics

**Emerging group**

## ○ Research lines

### 1: Biolaw and Bioethics

#### 1.1.- Legal protection of health data.

This line of research is part of the implementation of autonomous projects of a legal nature, or in the cross-sectional contribution to biomedical projects that require the corresponding analysis of the impact of the right to privacy by the proposed actions. This line includes the bio-legal analysis of the uses and applications of big data in health and the studies on access and preservation of the clinical history.

#### 1.2.- Informed consent in the assistance and in the investigation.

It addresses informed consent, a legal figure from the double dimension of healthcare practice and research activity. Within this line, the abandonment of the conception of informed consent as a defensive

medicine tool and its redesign as a tool for empowerment and doctor-patient communication.

#### 1.3.- Reproductive rights and assisted reproduction techniques.

It confronts reproductive rights from a double perspective: negative and positive. From the first one, the scope of the "right to non-procreation" is examined with the links that this has with the problem of sterilization, both voluntary and forced in case of incapacitated persons. From the positive side ("right to procreate"), the determination of the bio-legal scope of assisted human reproduction techniques forms part of this line of research.

#### 1.4.- Legal and ethical dimension of the transplanting activity.

In addition to examining the regulation of transplants, both living donor and deceased donor, and the analysis that raises the complex dynamic transplant, this line specifically addresses the so-called principle of self-sufficiency, the problem of the shortage of organs and tissues and the progressive integration of public policies regarding organ donation and transplantation.

#### Group Responsible

#### Joaquín Cayón de las Cuevas

Head of Legal Counsel  
Office  
Ministry of Health

cayon\_j@cantabria.es

#### Contributors

Silvia de Diego Lagüera  
Milagros Estrada Martínez  
Gustavo Merino Gómez  
Guillermina Navarro Caballero  
María Paz Zulueta  
Daniel Pérez González  
Ángela Ruiz Sáenz  
María Díez Sánchez

#### 1.5.- Legal aspects of vaccines.

This line includes the dialectic voluntary vaccination - compulsory vaccination, the problem of off-label vaccines, the transparency and homogeneity of the vaccination calendar and, finally, consent in minors and responsibility derived from vaccination (or, where appropriate, non-vaccination).

#### 1.6.- Medical responsibility.

In this line, we address civil, criminal and administrative litigation liability for damages caused by defective health services and products.

#### 2.- Sanitary rights as a tool for optimizing the assistance management

#### 2.1.- Extrajudicial resolution of conflicts in the sanitary field (health mediation).

The articulation of hetero-composite tools for extrajudicial resolution of health conflicts-internal and external-is studied, presided over by the principles of voluntariness, impartiality and agility.

#### 2.2.- Normative articulation of waiting lists.

The normative approach of the phenomenon of waiting lists is studied:

- Reimbursement of healthcare expenses in cases of assistance provided by means other than the NHS
- Compensation for patrimonial liability of the Public Administrations, when the delay has caused damage.
- Maximum time guarantee systems.

### 2.3.- Normative Impact Analysis of health programs.

Within the framework of these policies to improve regulation, the Normative Impact Analysis is configured as a method to assess the different existing regulatory options to achieve a specific health objective, as well as the positive and negative effects of each one. of them.

### 2.4.- Health organization, hiring and human resources.

It addresses the study of flexible organizational and legal models in the field of human resources management models and health contracts, through the analysis of innovative public procurement and HTA

### 2.5.-Globalization and Health Law: Global Health Law.

The category of Global Health Law is studied, the globalization of the health phenomenon and its incidence in health care, especially through the international treaties on cross-border assistance, pharmaceutical patents and foreign trade of drugs.

## ○ Research lines

The Photonic Engineering Group (GIF) is an R + D + I group that focuses its activities on Light Sciences and Technologies (Photonics), horizontal (transversal) field, considered one of the six key technologies (KET's) for the development of Europe. Being horizontal, the GIF applies its platform of knowledge, technique and resources (obtained or generated in any sector of application) to solve real problems in any sector of application among which is the health and medicine. Due to the structure of the GIF, to

which it works in a horizontal field and its philosophy of action the GIF must be judged and valued for its global production in the period of time considered.

In addition to the above and indicated in the different sections of this report, the activity of the group in the strategic lines defined in its program "Photonics for Life and Health" is increasing over time both in terms of collaborations with researchers and clinicians from different specialties from regional, national and European institutions and companies. The most relevant are described very succinctly:

Within the strategic line of Medical Diagnostic Tools based on photonic imaging techniques, activities have

been developed in two INNVAL projects (DICUTEN and DAPatOO) and one Art. 83 project (DiFoMO) associated with another INNVAL (INNVAL17 / 10) in a DTS project (INTRACARDIO) and in an intramural project with another group of the CIBER-BBN of the Polytechnic University of Madrid (MultiCardio3D-OCT) and in the project funded by the Parliament of Cantabria (POS-UC-2018-16) which deals with transfer the optical biopsy by optical coherence tomography to clinical practice.

**a)** Within the strategic line of devices and systems (including the smart ones) for better diagnosis and monitoring of diseases with special emphasis on the elderly population, activities are developed within the INNyCRON project (INCVAL 17/05

directed by Carlos Viadero trying to assess the chronicity, sarcopoeia and frailty of the elderly through a structured light tool, as well as the activities included in the project Challenges- Collaboration TeDFES (RTC-2017-6321-1) recently presented at a press conference given its scope.

**b)** Within the line of light-matter interaction as a basis for new light-based therapies, the European project ENM JTC 2018 (PANIPAC) of the hypercompetitive EURONANOMED III program has been achieved to develop a nanomedicine based on functionalized nanoparticles activated by light to activate the immune system against pancreatic cancer. On the other hand, at the national level, the CIBER-BBN and CIBER-ONC (NaTBiL) seed project has been obtained in a competitive public call (including oral defense before a jury of 24 members in ISC III), in which, in collaboration with an ONCOMET research project in Santiago de Compostela, is to demonstrate the feasibility of performing PDT internal therapies activated by light generated by bioluminescence. Likewise, work is being done on the CIBER-BBN intramural project (ACTI-BUBBLE) with nine other CIBER-BBN groups focused on the development of a nanomedicine to fight tumors in the brain.

**c)** Also within the framework of projects financed with funds from the national plan, companies and their own, work is being carried out on the development of detection and measurement systems of interest for health, being explicitly mentioning what concerns optical devices to guarantee quality food

#### About PEG-JM-Review CHUs-JM (16-03-2017)

Photonics (Light Sciences and Technologies) has been declared by the European Union one of its six Key Enabling Technologies and by USA one of its essential technologies for its development. It is a horizontal (or transversal) field of knowledge with impact in all the application sectors.

The Photonics Engineering Group (PEG) of the University of Cantabria generates knowledge and technique in the Photonic field with a special focus on solving real problems (not yet resolved or insufficiently determined) and, in the search for their solution, generate knowledge and technique that gives rise to publications, thesis and patents. During this process Information and Communication Technologies (ICT) can be used as an appropriate supplement.

PEG is formed by 26 research, scientific and technical staff following a dynamic model, where a part of the members are dedicated more intensively to the generation of knowledge and training, during a period of time, and the others, to the application of knowledge and technique performing development and innovation for the optimization of their interaction and the transference of results to the productive sector. This, in turn, feedback the group with real problems to be solved and resources to best carry out their mission. PEG has a R&D&I Photonics Laboratory (457 m<sup>2</sup>) equipped with facilities of Optical Fiber, Optical, Opto-Electronic, Electronic, Climatic, Thermal imaging characterization, Additive Manufacturing, Lasers, etc.

More than 50 R&D&i projects have been carried out with companies to improve their production processes or the quality of their products; or even, to innovate or to develop new products. The developed (and transferred) knowledge and technique have been able to improve their productivity and/or ensure their qualities. In addition, four spin-offs have emerged from PEG: TELNOS, Optical and Telecommunications systems (2005); Empiric Technologies, SL (2010), Sadiq Engineering (2011) and Edronica (2016).

#### Main Research Lines

Since its foundation (1992) PEG has been focused on Photonic/Optical/Fiber optic sensors; fiber light sources; Optoelectronics Instrumentation; Techniques of detection, Measurement and

Monitoring of events and processes using image for any sector of application. Without neglecting collaborations proposed from other sectors, PEG has very recently decided to focus its work on R&D&I, mainly, in life sciences and health. This decision is backed by a great progress in the Photonics knowledge, methods and techniques able to be used in biological sciences and health that are significantly contributing to the solution of several of the "societal challenges" of our time [as defined in the Lund Declaration [www.vr.se/lunddeclaration2015](http://www.vr.se/lunddeclaration2015) ].

PEG has joined the Centro de Investigación Biomédica en Red (CIBER-BBN) of IS Carlos III (2016), and also joined at the Instituto de Investigación Sanitaria de Valdecilla (IDIVAL) and set the "Photonics for the Life and Health" program which includes four strategic R&D lines:

- 1.** Medical diagnostic tools based on Photonic Imaging (Multi, Hyperspectral, OCT, Thermography, etc);
- 2.** Devices and Systems (including those referred to as smart) for a better diagnosis and monitoring of diseases with special emphasis in the elderly population;
- 3.** Interaction of light-matter as a basis for new therapies based on light and/or the manufacture of micro/nano structures by interaction of laser-matter for diagnosis and therapy;
- 4.** Optical devices without contact and Optoelectronic Efficient Systems (low cost or cost-effective) for quality and safety and security of food.

## ○ Research lines

### L1. Nursing care in cardiovascular area. IP: Ana Rosa Alzonero. Contributors: Víctor Fradejas. Silvia González.

Research on the impact of gender on coronary disease stands out. The contributions in this sense make it possible to specify the treatment more effectively and to establish preventive measures aimed at the female group. It is a pioneering research in our country, also led by a nurse.

### L2. Care in aging and dementias. IP Carmen Sarabia Cobo.

This line is especially productive with several contributions such as:

The validation in Spanish of the ICECAP-O questionnaire assessing quality of life, adapted to the population with institutionalized dementia. This instrument has special relevance because it is simple but provides valuable information about the quality of life of the people and can be answered by caregivers, something decisive in the advanced stages of dementia.

Also noteworthy is the research in the elderly population and with slight Cognitive Impairment

regarding the emotional processing of Emotional Facial Expressions. The most important contribution is that this is one of the first studies carried out that values that the most prodromal phases of dementia affect the recognition of facial expressions, something little studied until now. This fact opens an important door to research on communication with these patients as well as the role that cognitive processing plays in emotional processing during dementias.

Another important contribution is the use of new mechanisms in the improvement of stress and burnout in professionals and caregivers of people with dementia, a group with high stress rates. First-time use of the Heart Coherence technique in professionals and caregivers for

managing and managing stress has contributed to improving their quality of life and indirectly improving the care they provide. On the other hand the use of this technique has shown to have longitudinal effects maintained in the time being easy and simple to apply.

### **L3. Social networks and health. IP Rosario Fernández.**

Particularly important are the work related to the study of personal networks in health, a very little explored area at the national level. The contributions of the group allow a better understanding of the networks of social support of family caregivers contributing to improve the support that should be provided at the professional level. This line especially highlights the study of personal networks and health-related quality of life.

### **L4. Chronicity, dependency, caregivers. IP Carmen Ortego. Contributors: Carmen Sarabia, Rosario Fernández, M Jesus Durá, Rebeca Abajas, Francisco Amo.**

This line has just been opened thanks to funding from the University of Cantabria in a competitive national call for emerging research groups. The funded project will work with chronicity and caregivers in Primary Care through interventions based on advanced practice nursing.

### **L5. Care in relation to nutrition. IP M Jesus Durá Ros. Contributors: Carmen Sarabia Cobo, Rebeca Abajas, Francisco Amo.**

The main contribution of this line has been a joint project with the University of Bradford (work pending publication) relating the impact of stress on eating habits. Collaboration will also be initiated in a nationally funded competitive project of the Department of Chemistry of the UC on the wastage of nutrients in human food consumption.

### **L6. Teaching, educational innovation and scientific dissemination. IP Carmen Sarabia. Contributors: Ana Rosa**

### **Alconero, Silvia González, María Sáenz.**

We have led for the first time in Spain the study of the application of clinical simulation in training in palliative care, carrying out the creation and validation of the first battery of tests aimed at assessing satisfaction with own learning in nursing students in our country. Research in teaching methodologies is becoming relevant in nursing faculties worldwide, especially in the application of new technologies such as clinical simulation. We have also carried out the Spanish validation of the test. On the other hand, regarding the use of new educational methodologies, our group stands out as the most productive in Online Massive and Open Online Courses (MOOCs) related to Clinical Safety and psychosocial skills at the Spanish speaking level, with more than 200,000 students enrolled in their courses in The MiriadaX Platform, having received a prize for the best MOOC course in 2014 (Potencia tu mente course).

The MOOC courses contribute in a remarkable way to the scientific dissemination in the area of health, having been cataloged by Universia, our courses as the ones with the greatest media impact on health in 2015 and 2016.

### **L7. Medical-surgical nursing and patient safety. IP María Sáenz Jalón. Contributor Carmen Sarabia**

Our group has developed the first global study led by nurses to assess the impact of the LOOP ischemia technique versus the traditional method in upper limb surgery, obtaining the second National Nursing Research Award from HUMV in 2012. The LOOP technique is Safer and more effective for patients and our study has been presented at various Traumatology congresses, leading to its implementation by different hospitals nationwide.

Another outstanding line of our team is to have carried out the second largest study in patients on the characteristics and morbidity factors in hip fracture in elderly

people in our country. This study, in the process of publication, will benefit patients by highlighting the major risk factors associated with surgery (as demonstrated by the use of anticoagulants, which has been scarcely investigated to date). Also noteworthy is another pioneering research in our country, within the clinical safety in the surgical field, as is the unnecessary study of surgical doors during the interventions. This study, carried out in collaboration with engineers, will determine the causes, times and reasons for opening doors with the consequent commitment of clinical safety of the patient during the intervention. The study will allow posteriori to carry out educational interventions with the professionals of the operating room to sensitize to a problem not very visible, according to the literature.

### **L8. Application of Artificial Intelligence to the field of Nursing. IP Raquel Sarabia Lavín. Contributor: Paula Parás, Eduardo Vázquez.**

Nursing as a profession, is not exempt from the changes and transformations originated by the use of emerging technologies, or the influence they have and will have about its development. Specifically, the technologies based on Artificial Intelligence are having a great impact in the world of health. The conjunction of these technologies in Nursing will allow us to build intelligent, autonomous systems with the capacity to prediction that help in their day to day, both professionals and patients. The objective is not to replace the human character of nursing, since we consider that the Technology and humanism are complementary elements in health care general and specifically in nursing care.

This group has recently collaborated in the definition and development of an application mobile and web, which provides an intelligent system for the prevention of ulcers by pressure (UPP). The project, aimed at helping and guiding non-professional caregivers in the basic care, provides a tool to prevent, patients at risk of suffer from UPP,

suffer this important ailment. The project called "Smart UPP" has been one of the projects supported through the SODERCAN program I + C = + C 2016 of support for R & D projects in the field of ICT (Ref. TI16-IN-026). In addition, since the application of these technologies brings legal obligations with In relation to the protection, treatment and exploitation of personal data, there is a researchers specialized in the legal framework that regulates these legal aspects.

## ○ Research lines

### 1. Socioeconomic determinants of health and use of health resources.

**Demand and immigration. Health expenditure and health and socio-health financing:** projects, articles and presentations to national and international congresses. Economic analysis of health decisions and their spending as well as implications in, among other fields, public health. Some aspects are carried out in collaboration (articles and papers to national and international congresses) since 2014 with the IDIVAL group of epidemiology and public health whose head is Dr. Javier Llorca.

### 2. Economy of the drug (analysis of the pharmaceutical sector).

#### Economic evaluation of programs and technologies. Health information systems:

projects, articles and papers at national and international conferences; research in economics and medicine management, efficiency-equity of health and pharmaceutical services (as well as technologies) of administrations and health organizations.

### 3. Economy of mental health:

given the greater need to approximate within the category of mental disorders the cost per patient and in particular, the cost of psychotic disorders in this line of R & D analyzes the cost generated by patients who debutan with an episode of psychosis, so that if they are treated within a specific assistance protocol, which includes hospitalization and consultations, it can be based on the socioeconomic determinants of these patients to show that part of the

expense is associated with direct costs in health services, non-health costs (informal care) and indirect costs (loss of work productivity, chronic disability, etc.). This line is in collaboration (projects, articles and presentations to national and international conferences in progress) since 2016 with the IDIVAL group of psychiatry whose responsible is Dr. Benedicto Crespo).

### 4. Econometrics of health and habits and quality of life.

Theoretical and applied models of decision making in health and social services. Economics of disability, dementia and dependence in one of these lines of R & D determine the resources used and the costs associated with the management of multiple sclerosis (MS) depending on its severity based on clinical practice. The clinical and sociodemographic characteristics of patients with MS, the morbidity of patients in the observation period and the treatment administered, as

well as approximate the indirect costs associated with the loss of productivity of these patients are also described. This line is in collaboration (projects, articles and papers to national and international conferences in progress) since 2016 with the group IDIVAL clinic and genetics of headaches which is responsible for Dr. Agustín Oterino in another of these lines of R & D given that in many patients their cases are in states of total cognitive and / or functional dependence, this implies a high impact on the quality of life of patients and their families. The high health and social costs are analyzed, considering also the main reasons for the institutionalization of patients, etc. This line is in collaboration (projects, articles and papers to national and international congresses in progress) since 2017 with the IDIVAL group of neurodegenerative diseases and with the IDIVAL group of nurses responsible for the teacher Carmen Sarabia.

## 5. Economic analysis and evaluation of public policies.

Economy of health expenditure. Efficiency. Methods and tools for evaluating public policies (projects, articles and presentations to national and international congresses): from this R & D group the master and expert (postgraduate) in the direction and management of health services of the University of Cantabria in collaboration with the Health Department of the Government of Cantabria and research into improving the efficient management and equitable management of health services as well as their economic impact

## Research lines

**1.-Epidemiology of autoimmune diseases** (mainly rheumatoid arthritis (RA), giant cell arteritis, scleroderma, spondyloarthropathies (EspA), systemic lupus erythematosus (SLE), psoriasis, antisynthetic syndrome, interstitial lung disease, Shoenlein-Henoch purpura PSH), aortitis, fibromyalgia and hidradenitis suppurativa). We analyze incidence, clinical spectrum and evolutionary course of these diseases. In many cases, these data are unknown in the Spanish population, which puts our center as a reference for the knowledge of these diseases in southern European population.

**2.- Cardiovascular risk (CV) and vascular disease in autoimmune diseases** (mainly RA, EspA, SLE, psoriasis and hidradenitis suppurativa). Role of inflammation and genetics in their development and clinical presentation. We analyzed the markers (analytical, clinical and imaging) associated with inflammation that may be involved in the development of CV events and early mortality in patients with chronic inflammatory rheumatologic diseases.

**3.- Genetic, serum and gene expression profiles of autoimmune diseases and their associated comorbidities** (mainly RA, giant cell arteritis, scleroderma, EspA, SLE, psoriasis, antisynthetic syndrome, interstitial lung disease, aortitis and PSH). Study of the genetic predisposition pattern of susceptibility as well as analysis of serum biomarkers and gene expression profiles in rheumatologic autoimmune inflammatory diseases and their associated comorbidities.

**4.- Therapeutic strategy with biological agents in patients with autoimmune diseases (mainly RA, EspA and psoriasis).** Effect on clinical parameters of the disease and the development of CV disease. Based strictly on clinical indication for lack of response to conventional standard therapy, in those patients that due to the severity of the disease require biological treatments, we

analyze the impact of these therapies on the progression of atherosclerotic disease, analyzing serum markers and clinical parameters Associated with an increased risk of CV mortality and the implication of these drugs in their pathogenesis as potentially "protective" therapies against the development of CV disease progression.

### 5- Role of endothelial progenitor cells in the pathophysiology of interstitial lung disease associated with rheumatoid arthritis

## Projects

**1.** Miguel Ángel González-Gay Mantecón. **Ayuda por producción al grupo de Epidemiología Genética y Arteriosclerosis en enfermedades inflamatorias sistémicas.** APG/06. FUNDACION INSTITUTO DE INVESTIGACIÓN MARQUÉS DE VALDECILLA IDIVAL.

**2.** Miguel Ángel González-Gay Mantecón. **Molecular Reclassification to Find Clinically Useful Biomarkers for Systemic Autoimmune Diseases.** EU13/01- PRECISEADS. COMISIÓN EUROPEA, INNOVATIVE MEDICINES INITIATIVE.

**3.** Ricardo Blanco Alonso. **Estudio de marcadores genéticos de susceptibilidad en pacientes con púrpura de SCHOENLEIN- HENOCH.** FER14/11. FUNDACIÓN ESPAÑOLA DE REUMATOLOGÍA F.E.R..

**4.** María Cristina Mata Arnaiz. **Convenio de colaboración para el desarrollo de proyectos de investigación en la Unidad de Reumatología de la Dra. Cristina Mata Arnaiz del Hospital de Laredo.** CI14/38. MERCK SHARP & DHOME ESPAÑA.

**5.** Ricardo Blanco Alonso. Convenio de colaboración para el apoyo al **Plan de publicaciones del Servicio de Reumatología del Hospital Universitario Marqués de Valdecilla 2015.** CI15/14. ROCHE FARMA, S.A.U..

**6.** Ricardo Blanco Alonso. **Contrato de servicios de investigación para el proyecto Atherosclerosis y entesitis subclínica en pacientes con**

**Hidradenitis Supurativa.** CSI15/07. ABBVIE SPAIN, S.L.U..

**7.** Miguel Ángel González-Gay Mantecón. **Marcadores genéticos de enfermedad aterosclerótica en la Artritis Reumatoide.** PI15/00525. INSTITUTO DE SALUD CARLOS III. MINISTERIO DE ECONOMÍA Y COMPETITIVIDAD.

**8.** Ricardo Blanco Alonso. **Convenio para la gestión del ensayo con código I4V-MC-JADY.** Estudio fase 3, multicéntrico para evaluar la seguridad y eficacia de Baricitinib en pacientes con artritis reumatoide. CCI15/20.

**9.** Ricardo Blanco Alonso. **Contrato de apoyo a la investigación y publicación de estudios.** CSI15/14.

**10.** José Manuel Cifrián Martínez. **Donaciones para el desarrollo de proyectos de investigación.** BDP32. GLAXOSMITHKLINE, S.A., FERRER INTERNACIONAL, S.A., ACTELION PHARMACEUTICALS ESPAÑA, S.L..

**11.** Miguel Ángel González-Gay Mantecón. **Donación para el desarrollo de proyectos de investigación.** CI15/53. GLAXOSMITHKLINE, S.A..

**12.** Ricardo Blanco Alonso. **Convenio de colaboración para el desarrollo del Plan de Publicaciones de Reumatología del Hospital Universitario Marqués de Valdecilla.** CI16/09. ROCHE FARMA, S.A.U., ROCHE FARMA, S.A.U..

**13.** Ricardo Blanco Alonso. **Convenio para la gestión del ensayo con código SL0012.** Estudio en fase 3, multicéntrico, abierto y de extensión, para evaluar la seguridad y la tolerabilidad del tratamiento con epratuzumab en pacientes con lupus eritematoso sistémico (EMBODY 4). CCI16/18.

**14.** Ricardo Blanco Alonso. **Contrato de apoyo a la investigación y publicación de estudios.** CSI16/23. MERCK SHARP & DHOME ESPAÑA.

**15.** Miguel Ángel González-Gay Mantecón. **Convenio de colaboración para el desarrollo del Plan de publicaciones del Servicio de Reumatología del H.U.M de Valdecilla coordinado por el**

**Dr. Miguel Ángel González-Gay Mantecón.** CI16/43. ROCHE FARMA, S.A.U.

**16.** Miguel Ángel González-Gay Mantecón. **Red temática en Inflamación y Enfermedades Reumáticas.** RD16/0012/0009. INSTITUTO DE SALUD CARLOS III. MINISTERIO DE ECONOMÍA Y COMPETITIVIDAD.

## ○ Research lines

### 1. Epidemiology and molecular bases of antimicrobial resistance in Gram-negative and Gram-positive bacteria of clinical interest.

Much of the research activity of our group focuses on the study of genetic and biochemical aspects of antimicrobial resistance mechanisms of greatest clinical interest (mainly beta-lactams, quinolones and aminoglycosides) in a range of resistant bacteria, particularly Gram-negative organisms such as enterobacteria (*Escherichia coli*, *Klebsiella pneumoniae*, *Enterobacter* spp.) and non-fermenting organisms such as *Pseudomonas aeruginosa*,

*Actinetobacter baumannii* and the *Burkholderia cepacia* complex, among others. In the case of the Gram-positive bacteria, the group focuses mainly on the study of characterization of the genetic elements involved in antibiotic resistance and its dissemination in multiresistant enterococci, mainly *Enterococcus faecalis* and *Enterococcus faecium*. Specifically, we are interested in the mechanism of conjugation of various mobile genetic elements including pheromone response plasmids, which are found in almost 95% of the clinical strains of *E. faecalis* associated with hospital outbreaks and that can be transferred with a frequency of 100%. Similarly, we are studying the resistance to antimicrobials in different species of corynebacteria, such as *Corynebacterium diphtheriae*, *C. amycolatum*, *C. xerosis*, and *C.*

*jeikeium*, since many of the clinical isolates of these species are resistant to several antibiotics.

### 2. New diagnostic-epidemiological methodologies and in vitro activity of new antimicrobials.

The molecular diagnosis of infectious diseases has become an indispensable tool in our group. The Microbiology Service has included the sequencing and direct detection of genes related to the microbial taxonomy and antibiotic resistance mechanisms, and has initiated the first steps for the implementation of massive sequencing techniques with promising applications in multiple fields such as analysis phylogenetic of epidemiological outbreaks or studies of human microbiomes and their possible relationship with different pathologies.

Our group also participates in multi-center projects and clinical trials for the evaluation of new antimicrobials. We also participate in the evaluation with reference methods of automated antibiogram systems, especially when these systems incorporate new antimicrobials.

### 3. Mechanisms of pathogenicity and pathogen / host interactions in gram-negative bacteria of clinical interest.

Responding to the need for studies on the mechanisms of interaction with host cells and resistance to antimicrobials, our group develops a multidisciplinary research on host-pathogen interactions, mainly in *Acinetobacter*, *Pseudomonas aeruginosa* and *Burkholderia cepacia* species. For this, our group is involved in the identification of the main regulators involved in the perception of environmental signals through "quorum sensing", which induce the formation of biofilms and their dispersion and also in the characterization of the molecular determinants that contribute to the virulence, as are the bacterial secretion systems.

### 4. Infections by multiresistant microorganisms in patients transplanted from solid organs and hematopoietic progenitors.

This line of research started in 2012 is being consolidated in our group mainly through the acquisition of competitive financing research projects (FIS - PI13 / 01191 - PI16 / 01415 and Mutua Madrileña FMM 14/01) as well as with participation in projects of Pathology Network of Investigation in Infectious Pathology (REIPI) and European Projects (Increment-SOT).

### 5. Epidemiology, microbiological and clinical diagnosis of Cardiovascular and Osteoarticular Infections

Among the cardiovascular infections, the creation of the Multidisciplinary Endocarditis Group in 2008, in which the Infectious Diseases, Microbiology, Cardiology, Cardiovascular Surgery, Domiciliary Hospitalization and Internal Medicine of the H.U. Marques of Valdecilla, H. Sierrallana and H. de Laredo are participating. Our group has managed since the creation of the Support Group for the Management of Endocarditis in Spain (GAMES) in 2007, one of the 7 nodes in which

the 44 participating hospitals have been divided. In these 11 years of collaboration has contributed to a better knowledge of endocarditis in Spain that is impacting on a better approach both diagnostic and therapeutic. In the case of osteoarticular infections, we have focused mainly on the study of joint prosthesis infections, which began in 2009 with the execution of the Research Project: PI 08/0609 where the study of the role of the sonicate in the diagnosis was introduced of joint prosthetic infections (in conjunction with the Traumatology and Orthopedics and Microbiology Services). The results have had as a positive consequence the incorporation into the routine of the Microbiology laboratory of said technique. Next, and thanks to API 11/09, the study of Systemic Markers is being carried out in the diagnosis and evolutionary control of Knee or Hip Prosthesis Infection (IPRC) prior to the removal of the implant.

### 6. Optimization of antimicrobial treatment and its impact of antibiotic consumption on cost savings and bacterial resistance.

The excessive and inadequate use of antimicrobials is currently an important public health problem, due to the emergence of microorganisms increasingly resistant to available antibiotics, as stated in the National Plans against Resistance to Antibiotics 2014-2018 and 2019-2021, prepared by the Ministry of Health, Consumption and Social Welfare (MSCBS) in collaboration with the Ministry of Agriculture, Fisheries and Food (MAPA) and under the coordination of the Spanish Agency for Medicines and Health Products (AEMPS). This line of research started in 2006 with the award of two research projects (FIS: PI06 / 90094 and API: 06/01), and that has received the award for teaching excellence Valdecilla Caja Cantabria in 2013 aims to achieve through recommendations and training on the use of antimicrobials in a standardized way, by a person with experience in this area and the result of a multidisciplinary collaboration, an appropriate use of antibiotics. The experience accumulated in the Marqués de Valdecilla Hospital has been transferred to other hospitals for 6 years by teaching specialist physicians from National hospitals who come to the Infectious Diseases Service to be trained.

## ○ Nanovaccines and cellular vaccines based on Listeria monocytogenes and their applications in biomedicine

**Emerging group**

## ○ Research lines

### 1.- Cerebral listeriosis and neonatal listeriosis models:

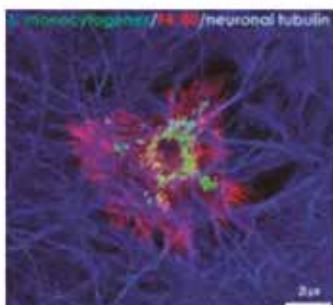

(PI: Dr. C. Alvarez Domínguez / Grants: SAF2006-08968, SAF2009-08695, SAF2012-34203). To establish cerebral and neonatal listeriosis models to analyze specific virulence factors of the pathogen targeted

to microglia and design a cerebral listeriosis vaccine. This study implies the characterization of microglia phagosomes using differential proteomics (col. C. Gil. UCM) and examine new adjuvants for neonatal vaccines (col. M. Fresno, CBMSO).

### 2.- Listeria based dendritic vaccines loaded with peptides against infectious agents.

(PI: Dr. C. Alvarez Dominguez and Co-PI: Dra. S. Yáñez Diaz/Grants: SAF2009-08695 y SAF2012-34203

and Approved Clinical Study: CEIC-Acta 19/2014- 2014.228). A Listeria based dendritic vaccine loaded with peptides from virulence factors specific of Listeria (LLO) and common to Mycobacterium smegmatis (GAPDH) will be used to examine experimental prophylactic measures against both bacteria. Moreover, we are performing a clinical study with listeriosis patients from a 2014 outbreak with Dr. C. Fariñas (Infectious Section-HUMV) and Dr. Martínez (Microbiology Dpt-HUMV) and Biodonostia Group of Microbiologists (col. Dr. E. Trallero,

Dr. J. Marimon and Dr. CG. Cilla) to elaborate a human vaccine for patients at high risk of listeriosis.

### 3.- Listeria based dendritic vaccines loaded with peptides against melanoma

(IP: Dr. C. Alvarez Dominguez y Dra. S. Yañez Diaz/Proyectos: SAF2009-08695 y SAF2012-34203 y Estudio Clínicos aprobado: CEIC-Acta 30/2012). Se utiliza una vacuna DC basada en Listeria cargada con el péptido LLO91-99 como terapia anti-adhesiva para el melanoma en modelos murinos (col. Dr. J. Gomez-Roman, S. Anatomía Patológica) y preparar en pacientes con melanomas una vacuna DC anti-melanoma en colaboración con los Servicios de Oncología y Dermatología del HUMV (melanoma metastatico) (cols. Dr. H. Fernandez-Llaca y Dra. A. Garcia) y el Grupo de Melanoma Humano de UPV (col. Dra. D. Boyano Lopez).

### 4.- Listeria based Nanovaccines and their applications.

(PI: Dr. C. Alvarez Dominguez, Dr. S. Gomez Salces and Dr. S. Yañez Diaz/Grants: SAF2012-34203, and Approved Clinical Study: CEIC-Acta 1/2016-2015.177). In this study we used as vaccine vectors gold glyconanoparticles (AuGNP) of 2 nm size conjugated to Listeria peptides, LLO91-99 and

GAPDH1-22. The group of CIC-biomaGUNE collaborates with our group preparing AuGNP (cols. Dr. M. Marradi, Dr. I. Garcia and Dr. S. Penades). We have performed studies with a prophylactic experimental nanovaccine against listeriosis and a non-pathogenic tuberculosis model. The efficiency of nanovaccine is based in their targeting to dendritic cells, lack of toxicity, biocompatibility and induction of a cytotoxic cellular immune response. Other applications with these Nanovaccines and their modifications are tumor therapies.

## ○ Research lines

The research activity of our group focuses on the study of the cellular and molecular mechanisms involved in rheumatic inflammatory diseases. Our final aims are the

identification and characterization of potential therapeutic targets for the treatment of these diseases. We undertake these tasks from a basic approach, coordinated by Dr. Jesus Merino at the University of Cantabria, and a clinical approach coordinated by Dr. Jaime Calvo at the Hospital Sierrallana of Torrelavega. Jesus Merino, in close collaboration with Dr. Ramon Merino (IBBTEC), is studying several molecules involved in the

control of inflammatory responses, such as BAMBI (BMP and activin membrane bound inhibitor) and BCL2A1 (a cell death regulator). We maintain also collaborations with other Spanish groups to evaluate the role in inflammation of the immunomodulatory molecules, CD38 (Dr. Jaime Sancho, Granada), CD5 and CD6 (Dr Francisco Lozano, Barcelona), the transcriptional factors E2F1 and E2F2 (Dr. Ana Zubiaga, UPV) and GPBP

(Goodpasture antigen binding protein), a protein-kinase that forms quaternary protein structures (Dr Juan Saus, Fibrostatin SL, Valencia).

Overall, this research activity pretends to validate these molecules as therapeutic targets in inflammation and autoimmune diseases. For this purpose we use murine models of these diseases, such as the collagen-II-induced arthritis, adriamycin or bleomycin-induced pulmonary fibrosis, the colitis induced by sodium dextran sulphate, or the psoriasis caused by local application of Imlimumod or i.p. injection of *Saccharomyces cerevisiae* mannan.

- Impact of gender on prognosis of rheumatoid arthritis, with particular emphasis on quality of life.
- Influence of treatment with TNF inhibitors in the oxidative phenotype of HDL cholesterol and its influence on their anti-atherogenic capacity in patients with rheumatoid arthritis.
- Lipoprotein profiles and HDL phenotypes in patients with systemic lupus erythematosus (SLE) in correlation with inter-ethnic differences, in collaboration with the University of Puebla (Mexico).
- Prospective evaluation of individuals with high titers of antinuclear antibodies (>1280) without clinical symptoms of autoimmune diseases.
- Evaluation of new criteria for clinical classification of SLE patients (SLICC criteria), in collaboration with Dr. Luis Ines (University of Coimbra, Portugal).
- Co-chairman in the RELESSER-PROS registration for the follow-up of SLE patients.
- Phase 3 Clinical trials: two trials in rheumatoid arthritis and one in psoriatic arthritis.

## Research lines

**1. Line of genetics/genomics.** It studies the genetic and epigenetic mechanisms involved in prevalent skeletal diseases like osteoarthritis and osteoporosis. The following issues are addressed:

- Genetic polymorphisms that influence bone mass, the risk of fractures and large joint osteoarthritis, using candidate genes and genome-wide association studies.
- The role of DNA methylation in the differentiation of bone cells as well as in the modulation of the expression of genes which play a key role in skeletal homeostasis.
- The possible role of the differential expression of microRNAs in bone changes that characterize these disorders.
- Molecular and functional study of mesenchymal stem cells as precursors of bone-forming cells.

**2. Clinical and epidemiological line.** Its objective is to study in Cantabria, as well as in the whole Spain (the latter by means of

multicenter studies), the prevalence and incidence of different aspects of mineral and bone metabolism diseases, mainly (but not only) osteoporosis. This includes the prevalence of osteoporosis, the incidence of osteoporotic fractures (vertebral and hip fractures), and the prevalence of low vitamin D levels and secondary hyperparathyroidism, as well as the analysis of those factors influencing the response to treatment. The relationship between osteoporosis and other disorders, such as dyslipidemias, diabetes, obesity, and metabolic syndrome should also be studied. Of particular interest is the follow-up of the cohort of Camargo, which allows the analysis of the association between various manifestations of bone and mineral metabolism diseases with their risk factors. Mortality rate will be considered in the study. Prominent among the factors to be analyzed is the trabecular bone score (TBS), a new tool to evaluate the risk of osteoporotic fractures. On the other hand, we have participated in the Spanish Registry of Osteoporotic Fractures of Fémur, sponsored by SEFRAOS, which has already concluded and we will participate in the new National Fracture Fracture Registry in which more than 90 Hospitals have been registered Spanish people.

### 3. Mineral metabolism and cardiovascular risk in systemic inflammatory diseases.

A line of collaboration has been initiated with the Rheumatology Service for the study of mineral metabolism and cardiovascular risk in systemic inflammatory diseases.

### 4. Line of lipid metabolism

**genomic.** The Group of Molecular Biology (Prof. Rodriguez Rey) investigates on the molecular mechanisms of mesenchymal stem cells differentiation into adipose tissue. Firstly, the group studies the role of epigenetic regulation in the process of progenitor cell differentiation into adipocytes and its possible relationship with obesity, with particular emphasis on the role of microRNAs (in collaboration with Dr Carlos Fernandez of Yale University). Secondly, the group investigates the role of other epigenetic mechanism, the methylation of DNA, in the modulation of gene expression during the process of adipocyte differentiation. Besides that, and in collaboration with the Group of Professor Carmen Évora (Pharmaceutical Technology Department, Universidad de la Laguna) and Dr. Gomez-Cimiano (Servicio de Traumatología del HUMV) it is developing an experimental model consisting of using mesenchymal stem cells modified in the treatment of fractures of critical size.
