COMISION EUROPEA	EU20/22	COST Action CA18211 Perinatal Mental Health and Birth-Related Trauma: Maximizing best practice and optimal outcomes	Developmental research has firmly established that the quality of infant-parent relationships is a critical factor in early and later childhood development, consequently, a family-centred approach to any investigation of birth-related trauma is critical, as trauma can be transmitted within the family system. Given the enormous economic burden it places on women, health systems, and particularly children, relatively small improvements in services to prevent, detect and treat this problem can benefit society significantly. The main aim of this Action is two-fold. The Action will establish an international multidisciplinary network of researchers, clinicians, NGOs and SMEs to 1) consolidate and disseminate current evidence and coordinate a joint effort to seek ways to prevent, minimise and resolve birth-related trauma, and to optimise emotional and psychological outcomes for parents and families and 2) accelerate the translation of that knowledge into best practices that can be shared across Europe to reduce the societal and economic burden arising from birth-related negative/traumatic experiences.	33	- €	100%	NO
COMISION EUROPEA	EU21/04	Supranational Bio-law Interest Group of the European Association of Health Law (EAHL)	Antimicrobial agents are a public good due to its critical role in protecting human lives and health. Innovations in AMR is a collective responsibility and hence a collaborative model is beneficial for smart regulation. Tackling AMR requires collective efforts, as it is a multifaceted endeavour covering key dilemmas in health innovation from cradle to grave across different jurisdictions at various levels of development. The 'One Health' Approach needs a holistic view not only on existing laws and regulations at national and international levels but also a nuanced appreciation on the market, implementation, and public policy with a view to engaging multi-sectoral collaboration		4.500,00 €	100%	NO
COMISION EUROPEA	EU21/16	Enhancing Whole Genome Sequencing (WGS) and/or Reverse Transcription Polymerase Chain Reaction (RT-PCR) national infrastructures and capacities to respond to the Covid-19 pandemic in Spain - HERA Incubator	The general objective of the action is to enhance and/or improve national public health WGS and/or RT-PCR capacity.	12	114.223,00 €	100%	NO
